<sup>5</sup> Data from 2021 Arts & Culture Progress Report

<sup>6-7</sup> Data from Statistics Canada based on forecasts from Cultural Satellite Account

#### Discussion

##### Social Contributions

1. The number of events and workshops rose sharply in 2022, due to the restarting of in-person events in 2022 after COVID-19 restrictions were lifted in late 2021.
2. 2022 saw pent-up demand for in-person attendance increasing as soon as event and gathering restrictions were loosened.

3. In 2022, the number of grants distributed was similar to the previous year, which was an all-time high.
4. CRD Arts and Culture conducts promotion of its programs and targeted outreach to eligible organizations, all in an effort to enlarge the pool of grant applicants. Funding more first-time applicants is an effective method of diversifying the variety of arts projects activated and audiences engaged.

### Economic Contributions

5. Total arts grant funding has remained consistent throughout the pandemic and continues to have modest increases in 2023.
6. The most recent GDP data from Statistics Canada is from 2020, which shows the pandemic pullback in activity. With the restart of arts activities in 2021 and 2022, it is expected that GDP will rebound to prior levels at minimum.
7. The most recent jobs data from Statistics Canada is from 2020, which shows the impact of the COVID-19 pullback in economic activity. The long-term trend, however, has been a continued increase in culture jobs.

## GOAL 10B: SUSTAIN & ENHANCE ARTS THROUGHOUT THE REGION

### Targets & Benchmarks

1. To scale up participation in the Arts and Culture Support Service will require new jurisdictions to join this service.
2. To scale up support for performing arts facilities would require more funding, which could be pursued through multiple methods, including through existing services.

### Measuring Progress

| Ref | Performance Measure(s)   | Type     | 2022 Actual | 2023 Forecast | 2024 Target | Desired trend |
|-----|--|----------|-------------|---------------|-------------|---------------|
| 1   | Increase the number of participants in the Arts and Culture Support Service <sup>1</sup> | Quantity | 9           | 9             | 10          | ↗             |
| 2   | Increase the support available for performing arts facilities (\$M)                      | Quantity | \$1.33      | \$1.33        | \$1.38      | ↗             |

<sup>1</sup> Currently there are nine participating jurisdictions in this service.

### Discussion

1. The ability to add participants to this service is dependent on external factors, namely the interest level of willingness of non-participating jurisdictions to join the service through the council consent process.
2. The ability to increase support to the Royal Theatre and McPherson Playhouse is also dependent on external factors, namely that current participants support amending bylaws to remove the current fixed maximum contribution amount.

## GOAL 10C: AFFORDABLE RECREATION OPPORTUNITIES THAT IMPROVE LIVABILITY – PANORAMA RECREATION

### Targets & Benchmarks

The metrics reflect attendance and overall success of programs and services, which show that what is offered to the community meets its needs and is affordable.

### Measuring Progress

| Performance Measure(s)  | Service                                    | Type     | 2022 Actual | 2023 Forecast | 2024 Target |
|---|--|----------|-------------|---------------|-------------|
| <b>1 Offer programs that meet community need</b>  | Program success rate <sup>1</sup>          | Quality  | 85%         | 88%           | 85%         |

| <b>2 Maximize participation levels in drop-in recreation programs and services <sup>3</sup></b> | Aquatics                                   | Quantity | 121,474     | 170,487       | 194,869     |
|   | Arena during ice season                    | Quantity | 8,577       | 11,931        | 13,392      |
|   | Fitness classes                            | Quantity | 21,039      | 29,574        | 33,147      |
|   | Weights                                    | Quantity | 98,762      | 148,557       | 187,206     |
|   | Sports                                     | Quantity | 2,084       | 6,252         | 8,025       |
|   | Community Recreation                       | Quantity | 4,239       | 4,271         | 4,280       |
|   |  |          |             |               |             |
| <b>3 Increase new program offerings and maximize revenue <sup>4</sup></b>                       | New program offerings <sup>5</sup>         | Quality  | 45          | 30            | 35          |
|   | Registered programs revenue <sup>6</sup>   | Quantity | \$1,833,424 | \$1,988,967   | \$1,910,850 |
|   | Admissions – single admission <sup>7</sup> | Quantity | \$352,050   | \$417,288     | \$346,812   |
|   | Admissions – punch pass <sup>8</sup>       | Quantity | \$724,918   | \$943,318     | \$1,172,045 |

<sup>1</sup> Proportion of registered programs offered to the public that proceed, as minimum registration levels have been met. Calculated by programs that run divided by programs offered. Data from recreation software Activity Registration Summary.

<sup>2</sup> Average participation rate of courses, as a percentage of maximum course capacity reached, on average across all programs. Calculated by number of participants registered divided by the maximum capacity of the program. Data from recreation software Activity Registration Summary.

<sup>3</sup> Total annual visitors to drop-in reservable programs given capacity and staffing limitations; data from recreation software Daily Attendance Report – Date Range.

<sup>4</sup> Data from recreation software General Ledger, Activity Registration report and program coordinators.

<sup>5</sup> New program is defined as a program not offered in the prior year.

<sup>6</sup> Revenue generated by registration in programs.

<sup>7</sup> Revenue generated by single admission purchase.

<sup>8</sup> Revenue generated by punch pass and timed pass purchases.

### Discussion

**Metric 1:** Course participation has been added as an additional benchmark for Metric 1. Course participation reflects how full courses are on average, based on the number of participants registered relative to the total spaces available.

A target participation rate of 85% represents service delivery, which balances diversity of programming, alignment with community need, and financial sustainability.

**Metric 2:** Attendance continues to recover to pre-pandemic levels. June 2023 attendance is at 91% of June 2019, up from 77% in 2022.

**Metric 3:** The Lifesaving Society Swim for Life program was adopted in 2022 to replace the Canadian Red Cross program, which was phased out across Canada in 2022. The implementation of this program in 2022 led to a higher number of new programs than anticipated.

Licensed childcare program revenue is reduced from 2022 and 2023 as a result of increased funding from Child Care Operating Fund (CCOF) for Fee Reduction Initiative which directly reduces the fees paid by the public. The decrease in program revenue is reflected in a comparable increase in grant funding revenue. Projected CCOF funding for 2024 is \$229,270.

## GOAL 10C: AFFORDABLE RECREATION OPPORTUNITIES THAT IMPROVE LIVABILITY – SEAPARC

### Targets & Benchmarks

The metrics reflect attendance and overall success of programs and services, which show that what is offered to the community meets its needs and is affordable.

### Measuring Progress

| Performance Measure(s)   | Service                                    | Type     | 2022 Actual | 2023 Forecast | 2024 Target |
|--|--|----------|-------------|---------------|-------------|
| <b>1 Deliver fitness programs and service that meet community need and recover operation investment <sup>1</sup></b> | Fitness/Weights admissions                 | Quantity | \$22,838    | \$57,000      | -           |

|  | Registered programs revenue <sup>7</sup>   | Quantity | \$346,524   | \$472,000     | \$522,000   |
|  | Admissions – single admission <sup>8</sup> | Quantity | \$226,600   | \$364,000     | \$400,500   |
|  | Membership revenue - general <sup>9</sup>  | Quantity | \$219,796   | \$350,000     | \$399,250   |
|  | Membership revenue – golf <sup>10</sup>    | Quantity | \$69,462    | \$81,000      | \$85,000    |

## Appendix D : Community Need Summary 2024

<sup>1</sup> Fitness & weight room admission revenue and revenue from all membership sales.

<sup>2</sup> User funding or tax investment (without debt).

<sup>3</sup> Total registered programs revenue (gross revenue) generated by registration in community recreation programs; data from recreation software General Ledger

<sup>4</sup> Proportion of registered programs offered to the public that proceed, as minimum registration levels have been met. Calculated by programs that run divided by programs offered. Data from recreation software Activity Registration Summary.

<sup>5</sup> Total annual visits to drop-in programs by program area. Data from Membership Pass Scan report, Drop-in Sales report and Activity Registration Summary report.

<sup>6</sup> Data from recreation software General Ledger, Activity Registration report and program coordinators. New program is defined as a program not offered in the prior year.

<sup>7</sup> Total revenue generated by registration in programs. Data from General Ledger.

<sup>8</sup> Revenue generated by single admission purchase, including golf. Data from General Ledger.

<sup>9</sup> Revenue recognized from SEAPARC membership pass sales (excludes golf). Data from General Ledger.

<sup>10</sup> Revenue recognized from golf membership pass sales. Data from General Ledger.

### Discussion

**Metric 1:** The weight room and fitness classes have returned to drop-in operations post-COVID and fitness class offerings have increased. This has resulted in a trend of increased admissions and membership pass sales. Membership sales increase may also be supported by population growth. These metrics will be discontinued in 2024 and replaced with Metrics 5 & 6.

**Metric 2:** The projected increase in membership sales will contribute to an increase in proportion of user funding as there is generally only a small increase in expense associated with drop-in services.

**Metric 3:** A return of the licensed preschool program in 2022 and continuing through 2023 is the main factor in the increase in community recreation revenue.

**Metric 4:** The goal is to be responsive to community needs by offering desired programs, contributing to a high success rate. Each season program coordinators evaluate the success of programs and discontinue or adjust those that have a pattern of being cancelled and try out new programs based on feedback>

**Metric 5 & 6:** This metric reflects current trends with increased admission, membership and registered program revenue, as well as increased fees as approved in the fees & charges bylaw. The trend is particularly strong with the weight room and fitness, with quickly increasing demand for these services.

# Memorandum

**TO:** Local Community Commission

**FROM:** Karla Campbell, Senior Manager, Salt Spring Island Administration

**DATE:** September 8, 2023

**SUBJECT:** 2024 Preliminary Local Community Commission Budget Review

## **ISSUE SUMMARY**

To present the 2024 Local Community Commission (LCC) budgets and obtain recommendations from the LCC to forward, along with initiatives for implementation as of January 1, 2024, to the Capital Regional District Board (Board) for approval.

## **BACKGROUND**

Budgets for review are specific to the LCC services. These services delivered are established by the *Local Government Act and Service Establishment Bylaws*, the Board strategic plan, and corporate service plans.

Under budget direction provided by the Board, review, and recommendation for approval of 14 Salt Spring Island service budgets are delegated to the LCC. These budgets are preliminary for review, and it is expected the LCC will make changes and may or may not be included in the preliminary 2024 CRD Financial Plan to be presented to the CRD Board on October 25, 2023. Changes from the LCC budget review will be considered by the Board for final budget approval in March 2024.

## **IMPLICATIONS**

### *Financial Implications*

#### **Requisition**

Table 1 summarizes the change in tax requisition from the 2023 final to 2024 provisional for each service.

**Table 1: 2024 Provisional vs 2023 Final Requisition**

| Salt Spring Island<br>Services | Requisition/Parcel Tax |                  |                |              |

\*services funded by Parcel Tax

The actual tax rate impact to residents will vary depending on the specified and defined service areas in which they reside, in addition to their individual 2023 property assessment values. The 2024 preliminary requisition impact shown in Table 1 (above) reflects the 2023 assessment values from BC Assessments. New assessment information will be incorporated in the final budget when revised data is released by BC Assessments in early February 2024.

## Operating Budget Overview

Table 2 summarizes the change in expenditures for each service the 2024 provisional budget compared to the 2023 final budget.

**Table 2: Summary of Operating Budget (2024 Provisional vs 2023 Final)**

| Salt Spring Island<br>Services | Total Expenditure |                  |                |              |
|--------------------------------|-------------------|------------------|----------------|--------------|
|                                | 2024              | 2023             | \$ Chg         | % Chg        |
| Septage                        | 1,150,132         | 1,028,430        | 121,702        | 11.8%        |
| Grant-in-Aid                   | 49,799            | 60,772           | (10,973)       | -18.1%       |

The provisional 2024 operating budget is \$7.1 million, an increase of \$0.8 million or 12.6% from 2023. The changes in operating expenditures are primarily due to the following:

- Septage: Increase in sludge hauling costs, allocations, labour, and composting facility operating deficit.
- Public Library: \$104K increase in contributions to Library Association
- Street Lighting: \$4K increase in allocation and streetlight relocation
- Community Transit: \$26K increase in BC transit Contract for services; \$50K reduced transfer from ORF and \$28K Safe Restart Funds.
- Community Parks: \$56K reduction in salary (reallocated to Park Land), \$5K increase in Contract for Services (dangerous tree removal), \$13K increase to transfers to reserves, \$86K loss in market revenue combined with reduced expenses netting \$43.8K loss in revenue.
- Community Rec: \$39K increase in salaries which is offset by \$39K increase in recreation program revenue; \$26.5K increase in recreation programming service levels; \$5,000 increase in transfers to reserves.
- Pool & Park Land: \$92.5K increase in salaries (\$56K reallocation from Community Parks / \$35,000 Pool opening Sundays); \$47.5K increase in transfer to pool reserves; \$124K increase in transfer to Park Land reserves; \$13K increase in pool revenue; \$13.5K increase in Park Land revenue.

## Capital Budget Overview

Capital plan highlights including capital projects for each service are listed within each budget package.

Capital plans are developed through a process of reviewing:

- projects in progress
- condition of existing assets and infrastructure
- regulatory, environmental, risk, health and safety
- new or renewal initiatives prioritized by each service

The following table summarizes the capital plan for LCC services.

**Table 3 - Summary of Capital Plan (in \$'000)**

|                            | 2024<br>Capital<br>Plan | 2023<br>Capital<br>Plan | \$△<br>Change | % Change     |
|----------------------------|-------------------------|-------------------------|---------------|--------------|
| <b>Park Land Rec Prog.</b> | 3.7                     | 10.0                    | -6.3          | -63.1%       |

| <b>Fernwood Dock</b>       | 0.7                     | 0.5                     | 0.2           | 32.1%        |
| <b>Septage</b>             | 2.1                     | 0.4                     | 1.7           | 485.7%       |
| <b>Transportation</b>      | 4.9                     | 3.9                     | 0.9           | 23.9%        |
| <b>Transit</b>             | 1.1                     | 0.5                     | 0.6           | 120.0%       |
| <b>Library</b>             | 0.1                     | 0.1                     | 0.0           | 0.0%         |
| <b>Total</b>               | <b>18.7</b>             | <b>20.3</b>             | <b>-1.6</b>   | <b>-7.8%</b> |

The 2024 Provisional capital plan is \$1.87 million, a decrease of approximately \$160K or 7.8% from 2023.

## Advanced Approvals

Advanced approval is requested in situations where the commencement or continuity of work before March 2024 is required to address operational needs. These are often related to items that have regulatory compliance implications, grant deadlines and capital projects for which tenders must be issued and where a delay can have negative impacts on service delivery. Items identified in Appendix N as required activities to begin in advance of the March final budget are:

- Recreation: Staffing positions for SIMS - \$40,504 for 0.5 FTE Facility Maintenance Worker, \$17,350 incremental increase due to 0.6 FTE Recreation Program Assistant
- Recreation: Recreation Programming equipment \$15K.
- Septage: Storage Building Upgrades \$30K
- Septage: Referendum or Alternative Approval Process Funding for Future Projects \$35K

## **Summary**

The attached 2024 LCC budget packages in Appendix A include operating and capital, are provided for provisional approval.

The provisional budget is subject to change as a result of the final 2023 surplus/deficits, receipt of revised assessment and any adjustments recommended by the LCC prior to final approval of the Financial Plan bylaw by March 31.

## **CONCLUSION**

The 2024 LCC budgets have been delegated to the LCC by the CRD Board for review and provisional approval. Overall, the 2024 LCC preliminary budget has been prepared based on the service plans and provide ongoing CRD services that respond to the varying needs of the Salt Spring Island.

## 5 YEAR CAPITAL PLAN

Service #:

**1.455**

## SSI Community Parks

[illegible]

Service:

1.455

SSI Community Parks

Project Number

25-01

Capital Project Title

Cushion Lake Beach Access Upgrades

Capital Project Description

Upgrades and improvements required for existing beach accesses on MOTI right of ways.

Project Rationale

Upgrades required for existing beach accesses

Project Number

24-02

Capital Project Title

Maintenance Equipment replacement

Capital Project Description

Replace maintenance equipment (Floor scrubber, Lighting, Flat deck trailer, push mower, weed eater, chainsaws)

Project Rationale

Replacement of equipment that has reached its end of life.

Project Number

25-02

Capital Project Title

Grace Point Boardwalk Upgrades

Capital Project Description

Preventative maintenance to existing Grace Point boardwalk based on 2020 structural assessment

Project Rationale

Project Number

24-01

Capital Project Title

Ganges Harbour Walk (Detailed Design & Construction Documents)

Capital Project Description

Detailed design & construction for the Ganges Harbour Walk are required to secure a Statutory Right of Way needed for future construction

Project Rationale

Detailed designs to secure Statutory Right of Way

### **Salt Spring Island - Community Recreation**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.458 SSI Community Recreation

**Committee:** Salt Spring Island Parks & Recreation

**DEFINITION:**

Supplementary Letters Patent, Division XV, October 3, 1975 established to provide recreational programs for any Electoral Area.  
Bylaw No. 462 (March 8, 1978) to add Salt Spring Island as a participant.

**SERVICE DESCRIPTION:**

This is a service for the provision of recreation programs and day camps for youth on Salt Spring Island.

**PARTICIPATION:**

Electoral Area of Salt Spring Island

**MAXIMUM LEVY:**

Greater of \$262,436 or \$0.079 / \$1,000 on actual assessed value of land and improvements. To a maximum of \$547,527.

**MAXIMUM CAPITAL DEBT:**

N/A

**COMMISSION:**

Salt Spring Island Parks and Recreation Advisory Commission  
Continuation Bylaw #3763 (May 2011), an advisory commission for Parks and Recreation in the Salt Spring Island Electoral Area.  
Original established by Bylaw (Bylaw No. 327 - January 12, 1977).

**FUNDING:**

**Change in Budget 2023 to 2024**

| Total Other Changes       | 44,361 |   |

**2024 Budget** **381,702**

**Summary of % Expense Change**

|                               |       |
|-------------------------------|-------|
| 2024 IBC Costs                | 18.8% |
| Rec centre & day camps        | 11.8% |
| OH & HR allocations           | 1.0%  |
| Reserve transfer              | 1.8%  |
| Balance of change             | 0.3%  |
| % expense increase from 2023: | 33.6% |

% Requisition increase from 2023 (if applicable): 43.5% Requisition funding is 28.8% of service revenue

**Overall 2023 Budget Performance**  
(expected variance to budget and surplus treatment)

Revenues are projected at \$44,881 (15.7%) higher than budget mainly due to higher tennis court and day camp program fees, grants and donations. Operating costs are projected at \$49,881 (17.5%) higher than budget mainly due to higher auxiliary wages and benefits and recreation program expenses. Therefore, there is an estimated one-time unfavourable variance of \$5,000 (1.8%). This variance will be carried over to 2024 budget.

## **2024 Budget**

### **Salt Spring Island - Pool & Park Land**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.459 SSI Pool & Park Land

**Committee:** Salt Spring Island Parks & Recreation

**DEFINITION:**

A specified area established in 1972 to provide parks, recreation and related community programs, equipment, facilities and acquisition of real property. Bylaw No. 91(February 23, 1972). Since repealed, Bylaw No. 2422 (1996) and Bylaw No. 3183 (2004). Bylaw 4002 (2015) repeals bylaw 2422 and 3206.

**SERVICE DESCRIPTION:**

This is a service for the provision of general administrative services, water access points, active parks (playing fields) and overseeing facility upgrades, leisure brochures for Salt Spring Island.

**PARTICIPATION:**

Electoral Area of Salt Spring Island

**MAXIMUM LEVY:**

Greater of \$1,896,612 or \$0.6325 / \$1,000 on actual assessed value of land and improvements. To a maximum of \$4,383,681.

**MAXIMUM CAPITAL DEBT:**

N/A

**COMMISSION:**

Salt Spring Island Parks and Recreation Advisory Commission  
Continuation Bylaw #3763 (May 2011), an advisory commission for Parks and Recreation in the Salt Spring Island Electoral Area.  
Original established by Bylaw (Bylaw No. 327 - January 12, 1977).

**FUNDING:**

| % expense increase from 2023:                                      | <b>23.3%</b> |

% Requisition increase from 2023 (if applicable):

**31.1%**

Requisition funding is 82.1% of service revenue

**Overall 2023 Budget Performance**

(expected variance to budget and surplus treatment)

*Pool: expenses are projected to be \$45,067 (4.8%) over the budget mainly due to higher salaries & wages, contract for services and program development charges. Revenue is projected to \$12,190 (1.2%) over the budget mainly due to higher pool fees revenue. These result in projected one-time unfavorable variance of \$36,877 (3.7%) which will be carried over to 2024 budget. Park land: expenses are projected to be \$54,573 (4.9%) over the budget mainly due to higher repairs & maintenance costs, contract for services, rents and parks maintenance labour charges. Revenue is projected to \$31,257 (2.8%) over the budget mainly due to higher lease income. These result in projected one-time unfavorable variance of \$23,316 (2.1%) which will be carried over to 2024 budget. Combined: There is a one-time unfavorable variance of \$60,193 (2.8%) which will be carried over to 2024 budget.*

### **Fernwood Dock (SSI)**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:**    1.236    SSI Small Craft Harbour (Fernwood Dock)

**Committee:** Salt Spring Island Parks & Recreation

**DEFINITION:**

A local service area to establish, acquire and operate a service of small craft harbour facilities.  
Bylaw No. 3030, November 27, 2002.

**SERVICE DESCRIPTION:**

This is a service for funding and operating the Fernwood Dock, a small craft harbour facility on Salt Spring Island. This dock was divested to the CRD from the Department of Transportation in 2002. The Federal Government provided one-time funding of approximately \$280,000 for dock rehabilitation. This service is administered by the Salt Spring Island Parks and Recreation Commission.

**PARTICIPATION:**

Salt Spring Island Electoral Area.

**MAXIMUM LEVY:**

Greater of \$162,800 or \$0.05 / \$1,000 on hospital assessments for the Electoral Area of Salt Spring Island. To a maximum of \$346,536.

**COMMISSION:**

Fernwood Dock Management Commission (Bylaw # 3030, Nov 2002, Amendment Bylaw # 3762, Feb 2011).  
Salt Spring Island Parks and Recreation Commission (Bylaw #4293 No.1, 2019)

**FUNDING:**

Parcel Tax

## **2024 Budget**

### **Community Transit (SSI)**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.238 SSI Community Transit & Transportation  
1.238A Community Transit (SSI)

**Commission:** SSI Transportation

**SERVICE DESCRIPTION:**

Established by Bylaw #3438 the Salt Spring Island Transit and Transportation Service provides a public transportation system on Salt Spring Island, carries out transportation studies, provides for the construction, installation, maintenance and regulation of sidewalks and bicycle paths, parking facilities, pedestrian and safety and traffic calming facilities and implements transportation demand management programs.

**PARTICIPATION:**

The Electoral Area of Salt Spring Island

**MAXIMUM LEVY:**

Greater of \$245,000 or \$0.076 / \$1,000 of actual assessed value of land and improvements. To a maximum of \$526,735.

**COMMISSION:**

Salt Spring Island Transportation Commission

**FUNDING:**

The transit service is funded by Transit Fare Revenue and requisition.

### **Assumptions/Background:**

To fund service expansions & bus leasing costs

\*Interest should be included in determining the estimated ending balance for the current year. Interest in planning years nets against inflation which is not included.

## Reserve Schedule

### Reserve Fund: SSI Transit - Capital Reserve Fund - Bylaw 4214

Monies in the reserve fund will be used to provide for new capital works and extension or renewal of existing capital works, including the planning, study, design, construction of facilities, land acquisition, as well as machinery or equipment necessary for capital works and related debt servicing payments.

## Reserve Cash Flow

| Project Number    | 22-12  | Capital Project Title | Design and Construction of Pathway - Rainbow Road (350 m) | Capital Project Description | Design an asphalt sidewalk along the south side of Rainbow Road from Lower Ganges Road to 100-167 Rainbow Road including left turn lane near LGR. |
| Project Rationale | This project is part of the Active Transportation network. Design and construct an asphalt sidewalk along the south side of Rainbow Road from Lower Ganges Road to 100-167 Rainbow Road. |                       |   |                             |   |

Service: 1.238B Community Transportation (SSI)

Project Number 22-14

Capital Project Title Design and Construction of Pathway - Swanson Road (600 m)

Capital Project Description Design of pathway network sections that has been designed in the previous year - Swanson Road from Atkins to end of Lakeview Crescent.

Project Rationale This project is part of the Active transportation. Design and construction of pathway network sections that have been designed in the previous year - Swanson Road from Atkins to Lakeview Crescent.

Project Number 23-01

Capital Project Title Design and Construction of Pathway - Park Drive (200 m)

Capital Project Description Annual program to develop detailed design and obtain permits and regulatory approvals - Park Drive from LGR to Aldous Road and CRD Project Management

Project Rationale This project is part of the Active Transportation network. Annual program to develop detailed design and obtain permits and regulatory approvals - Park Drive from LGR to Aldous Road and CRD Project Management.

Project Number 23-03

Capital Project Title Design and construction of Pathway along harbour side on Lower Ganges Road. (400 m)

Capital Project Description Design and engineering for a pathway along Lower Ganges Road on the harbour side from Upper Ganges Road to the intersection at Rainbow Road.

Project Rationale This project is part of the Active Transportation network. Design and engineering for a pathway along Lower Ganges Road on the harbour side from Upper Ganges Road to the intersection at Rainbow Road.

Project Number 24-01

Capital Project Title Strategic Asset Management Plan & Accessibility Assessment

Capital Project Description Identify condition of pathways, develop prioritized list of maintenance and long term planning including accessibility assessment.

Project Rationale Annual program to develop detailed design and obtain permits and regulatory approvals - Whims Road from Maliview to North End Road, and CRD Project Management.

## **2024 Budget**

### **SSI Septage/Composting**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:**     **3.705 SSI Liquid Waste Disposal**

**Committee: Electoral Area**

**DEFINITION:**

To provide, operate, collect, treat and dispose of septage and sewage sludge and co-compost septage and sewage sludge with wood waste for the local service area on Salt Spring Island under Bylaw No. 2118 (April 1993).

**PARTICIPATION:**

The additional local service area is co-terminus with the boundaries of the electoral area of Salt Spring Island.  
The electoral area of Salt Spring Island is the only participating area for this additional local service.

**MAXIMUM LEVY:**

Greater of \$126,650 or \$0.10 / \$1,000 on actual assessments for land and improvements. To a maximum of \$693,072.

**COMMISSION:**

Salt Spring Island Local Community Commission (SSI LCC)

**FUNDING:**

|                           |   |
|---------------------------|---|
| <b>Parcel Tax:</b>        | Annual, levied on all properties in the Electoral Area      |
| <b>Tipping Fee:</b>       | \$0.455 per imperial gallon (Bylaw No. 4470, November 2021) |
| <b>Connection Charge:</b> | N/A   |

**RESERVE FUND:**

Bylaw No. 2274 (Feb 22, 1995)

**2024 Budget****1,150,132****Summary of % Expense**

|                                      |              |
|--------------------------------------|--------------|
| Increased sludge disposal costs      | 10.2%        |
| IWS Labour Allocation                | 1.4%         |
| Increased reserve transfers          | 0.2%         |
| Balance of increase                  | 0.1%         |
| <b>% expense increase from 2023:</b> | <b>11.8%</b> |

**% Requisition increase from 2023 (if applicable):****9.4%***Requisition funding is 35.9% of service revenue***Overall 2023 Budget Performance**

(expected variance to budget and surplus treatment)

Revenue is projected at \$5,250 (0.8%) higher than budget due to higher than expected revenue from tipping fees. Operating expenses are projected at \$1,088 (0.1%) lower than budget mainly due to lower maintenance and labour charges. The \$6,338 favourable variance will be transferred to the Capital Reserve Fund, which has an expected year end balance of \$125,334 before this transfer.

## **2024 Budget**

### **SSI Public Library**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.141 SSI Public Library

**Committee:** Electoral Area

**DEFINITION:**

To establish a service for the purpose of contributing to the cost of maintaining, equipping and operating the Salt Spring Island Public Library service by Bylaw No. 2725 adopted November 1999 and amended December 2009.

**SERVICE DESCRIPTION:**

This service makes an annual contribution to the Salt Spring Island Public Library Association to provide public library service for Salt Spring Island Electoral Area. In recent years in response to a drive for a new library, the CRD has passed loan authorization bylaws – one for the purchase of land (2006), the other for construction of a building (2009). Both transactions are supported by referendums. SSI Library was grandfathered in being allowed to own its own library, but under provincial legislation cannot build or acquire a new building. The new library building construction, completed in 2013, is owned by the CRD, and was funded two thirds by federal/provincial infrastructure grants.

**PARTICIPATION:**

The Electoral Area of Salt Spring Island.

**MAXIMUM LEVY:**

Greater of \$600,000 or \$0.186 / \$1,000 of actual assessed value of land and improvements. To a maximum of \$1,289,114.

**MAXIMUM CAPITAL DEBT:**

|                         |                                   |             |

| 2024 contribution to SSI Public Library Association   | 15.4%             |   |
| Balance of change                                     | 0.6%              |   |
| % expense increase from 2023:                         | 16.0%             |   |
| % Requisition increase from 2023 (if applicable):     | 16.0%             | Requisition funding is 99.8% of service revenue                           |

**Overall 2023 Budget Performance**  
(expected variance to budget and surplus treatment)

*There is an estimated one-time favourable variance of \$780 (0.1%) mainly due to lower repairs and maintenance expenses. This variance will be moved to Capital Reserve, which has an expected year end balance of \$73,100 before this transfer.*

## Reserve Schedule

### Reserve Fund: 1.141 SSI Public Library - Capital Reserve Fund - Bylaw 3940

-Capital Reserve Fund for SSI Library was established in 2014 under Bylaw No. 3940.  
 -Surplus monies from the operation of the service may be paid from time to time into the reserve fund.  
 -Monies in the reserve fund will be used to provide for new capital works and extension or renewal of existing capital works, including the planning, study, design, construction of facilities, land acquisition, as well as machinery or equipment necessary for capital works and related debt servicing payments.

### Assumptions/Backgrounds:

Building and capital reserve fund are new. Fund should be maintained at level required to pay for capital improvements and repairs.

\* Interest is included in determining the estimated ending balance for the current year. Interest in planning years nets against inflation which is not included.

## **2024 Budget**

### **Salt Spring Island Arts**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.299 SSI Arts

**Committee:** Electoral Area

**DEFINITION:**

To establish a service for the purpose of contributing to the cost of maintaining, equipping and operating the ArtSpring Theatre and contributing to arts programming through the Gulf Islands Community Arts Council (Bylaw No. 3116, January 29, 2004).

**SERVICE DESCRIPTION:**

This is a service for the contribution to the operation of the ArtSpring Theatre and the arts programs on Salt Spring Island. ArtSpring Theatre is operated by the Island Arts Centre Society. The arts programs are run by the Gulf Islands Community Arts Council. The CRD owns the land that the ArtSpring Theatre is situated on and there is a 10 year license of occupation with the Island Arts Society. Funds provided to ArtSpring Theatre are for maintaining, equipping and operating the facility. Funds provided to the Community Arts Council are for arts programming.

**PARTICIPATION:**

Electoral Area of Salt Spring Island

**MAXIMUM LEVY:**

Greater of \$93,050 or \$0.031 / \$1,000 of actual assessed value of land and improvements. To a maximum of \$214,852.

**FUNDING:**

Requisition

## **2024 Budget**

### **SSI Grants in Aid**

#### **Local Community Commission (LCC) Review**

OCTOBER 2023

**Service:** 1.116 SSI Grants in Aid

**Committee:** Electoral Area

**DEFINITION:**

To make grants-in-aid to any organization deemed to be contributing to the general interest and advantage of the electoral area  
(Letters Patent - March 24, 1977; April 17, 1985).

**SERVICE DESCRIPTION:**

Provide Grants to support organizations that are outside the existing services in an electoral area. Each electoral area budgets their anticipated requirements separately.

**PARTICIPATION:**

Salt Spring Island Electoral Area.

**MAXIMUM LEVY:**

Greater of \$152,452 or \$0.05 / \$1,000 on basis of converted hospital assessed value of land and improvements. To a maximum of \$346,536.

**COMMITTEE:**

Electoral Areas Committee

**REPORT TO CAPITAL REGIONAL DISTRICT BOARD  
MEETING OF WEDNESDAY, OCTOBER 25, 2023**

**SUBJECT**     **Award of Contract for Construction Services for Hartland Landfill – Cell 4 Liner**

**ISSUE SUMMARY**

To seek Board approval to award Contract 30.22.06-03 for Construction Services for Hartland Landfill Cell 4 Liner.

**BACKGROUND**

The Hartland Landfill is currently filling Phase 2 Cell 3, which will reach capacity between October 2024 and January 2025. Airspace creation has been ongoing for the last three years to prepare the subgrade for Cells 4, 5 & 6 of the landfill, which are located at the north end of the site within the approved landfiling boundary. The base level surface preparation was completed in August 2023 and the space is ready for Cell 4 liner construction.

This contract scope of work is made up of the following elements:

- Lining of Cell 4, including a groundwater pore pressure relief drainage layer, Cell 4 geosynthetic clay liner and a leachate collection layer. Cell 4 provides 1.5 to 2 years of landfiling space to allow time to construct Cell 5 and numerous other critical landfill infrastructure elements to achieve the maximum filling potential of Phase 2 through to 2050.
- Provisional items:
  - #1: supplying up to 7,749 m<sup>3</sup> of clay for construction of the liner
  - #2: production of 45,000m<sup>3</sup> of aggregate for landfill operations
- A contingency of up to 20% to ensure there is sufficient contract capacity to cover variable volume pay items in the contract and to perform other smaller civil upgrades required to start placing refuse into cell 4, such as final completion of the north end access road.
- All work under this contract must be completed by September 30, 2024.

The CRD issued an Invitation to Tender on BC Bid for Cell 4 Liner construction on September 15, 2023 and the tender closed on October 13. Three bids were received, and the results are as follows:

| <b>Company Name</b> | <b>Cell 4 Liner Cost (\$)</b> | <b>Provisional Items (\$)</b> | <b>Contingency (20%)</b> | <b>GST (\$)</b> | <b>Total Contract Value (\$)</b> |
|---------------------|-------------------------------|-------------------------------|--------------------------|-----------------|----------------------------------|
| Hall Constructors   | \$7,035,436                   | \$ 1,589,849                  | \$ 1,725,057             | \$ 517,517      | \$10,867,860                     |
| Jacob Brothers      | \$7,694,565                   | \$ 1,290,717                  | \$ 1,797,056             | \$ 539,117      | \$11,321,455                     |
| Copcan Civil LP     | \$8,837,737                   | \$ 1,327,221                  | \$ 2,032,991             | \$ 609,897      | \$12,807,847                     |

The low bidder's cost for Cell 4 construction is very close to the cost estimate provided by the CRD's design consultant (\$7,034,992). This confirms the bids were competitive and in line with costs on other recent landfill projects of similar nature.

All bids were found to be complete and accurate. Bids were evaluated based on the following

criteria: price, qualifications, landfill liner construction experience, performance on similar projects, safety performance, and potential increased cost to the CRD based on the tenderer's past performance. The bidder with the highest score is Hall Constructors, representing the bid with the best overall value. The draft contract to perform the work is attached as Appendix A.

## **ALTERNATIVES**

### *Alternative 1*

That Contract 30.22.06, Construction Services for Hartland Landfill Cell 4 Liner, be awarded to Hall Constructors in the amount of \$10,867,860.

### *Alternative 2*

That this report be referred back to staff for additional information.

## **IMPLICATIONS**

### *Financial Implications*

The scope of work included in the Invitation to Tender falls across a range of capital projects included in the approved 2023 and 2024 Environmental Resource Management Capital Budgets. There are sufficient funds in these budgets to cover the tender award value.

## **CONCLUSION**

Landfilling at Hartland has been taking place in Phase 2 Cell 3 for many years and is expected to reach its maximum capacity between October 2024 and January 2025. Efforts have been underway for several years to create the airspace and base surface for Phase 2 Cell 4, in preparation for installation of the liner system that must be completed before solid waste can be placed there. An invitation to tender was issued for construction of the Cell 4 liner system that resulted in three experienced companies providing compliant bids. Following an evaluation by staff, the low bidder has been identified as providing the best overall value to the CRD and staff recommend awarding the contract to the low bidder.

## **RECOMMENDATION**

That Contract 30.22.06, Construction Services for Hartland Landfill Cell 4 Liner, be awarded to Hall Constructors in the amount of \$10,867,860.

TO ALL RESPONDENTS

Dear Sir/Madam:

**RE: CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
NO. 30.22.06-03  
– ADDENDUM NO. 1**

In accordance with the provision contained in the "Instructions to Tenderers" for Contract No. 30.22.06-03, Addendum No.1 is hereby issued, and a copy attached.

Yours truly,

Ian Wiebenga, P. Eng.  
Facilities Management & Engineering Services  
Parks & Environmental Services Department

ADDENDUM NO.1

---

TO ALL RESPONDENTS:

This letter shall serve as confirmation that the revisions included herein as Addendum No.1 shall form part of the Contract Documents for Contract 30.22.06-03.

ADDENDUM NO.1

Revise the Contract Documents as follows:

**SCHEDULE OF PRICES AND ESTIMATED QUANTITIES**

**DELETE:**

Item 4 – Leachate, ground water and surface water dewatering to begin 14 days from Notice to Proceed until **June 1, 2024.**

**ADD:**

Item 4 – Leachate, ground water and surface water dewatering to begin 14 days from Notice to Proceed until **June 30, 2024.**

**SPECIFICATIONS**

**DELETE:**

**Section 3.2.1**

From 14 days from the Notice to Proceed until **June 30, 2023**, the Contractor shall mobilize personnel and equipment to the site to mitigate ground water, storm water and leachate flows onsite to protect the construction area and to ensure leachate containment for the site while under construction.

**ADD:**

**Section 3.2.1**

From 14 days from the Notice to Proceed until **June 30, 2024**, the Contractor shall mobilize personnel and equipment to the site to mitigate ground water, storm water and leachate flows onsite to protect the construction area and to ensure leachate containment for the site while under construction.

**DELETE:**

**Section 3.4.5**

The Pore Pressure Relief System (PRS) piping and drainage blanket (SOPQ items 5, 6, 7 & 8) within the Cell 4 liner footprint area must be completed and written approval received from the CRD Engineer prior to deployment & installation of the Cell 4 Synthetic Liner System by no later than **May 1, 2024.**

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.1

---

**ADD:**

**Section 3.4.5**

The Pore Pressure Relief System (PRS) piping and drainage blanket (SOPQ items 5, 6, 7 & 8) within the Cell 4 liner footprint area must be completed and written approval received from the CRD Engineer prior to deployment & installation of the Cell 4 Synthetic Liner System by no later than **May 30, 2024**.

**QUESTIONS AND RESPONSES**

- Q1. Since it is approximate volumes (no survey data), how would we get accurate readings?  
A1. **Approximate volumes are calculated from surveyed existing ground surface and the design subgrade. Schedule 2 has been revised to include the surveyed existing ground elevation coordinates (See Revised Specifications Schedule 2 attached hereto). Additional surveyed information can be made available to Tenderers upon request.**
- Q2. Where is the fresh stormwater getting pumped to?  
A2. **Fresh water pumped from quarry sumps/ditches will get pumped to either the existing corrugated PVC pipe in Toutle valley or to one of the leachate manholes on the existing 600mm leachate pipeline located in the quarry, depending on water quality results.**
- Q3. Will the water be tested by the CRD or the contractor?  
A3. **The CRD will be conducting water quality testing.**
- Q4. Will the CRD be providing the pumps?  
A4. **The CRD will provide one large capacity fire pump. Details are outlined in the Specifications Scope of Work. The CRD pump will be utilized if the Contractor's pumps are not able to keep up with dewatering.**
- Q5. Do we make pricing assumptions on the pumps? Could you provide a baseline flow rate?  
A5. **The quantity of pumps required is outlined in the Specifications Scope of Work. Contractors should include unit rates for additional pumps in their force account rate table submission in case the CRD requires additional pumping capacity. There is no baseline flowrate that the CRD can provide. Flows will depend on groundwater and precipitation flow events.**
- Q6. If needed, can we get weekend and evening access? For example, if we need to access the pumps during those times.  
A6. **Yes, the CRD will organize Contractor access to the site after-hours if pumping activities are required 24/7 and/or through the weekend, as required.**

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.1

---

- Q7. Will the CRD supply clay for the top and bottom sections?  
A7. **The CRD will provide all clay for the project. However, the Tender Submission requires the Contractor to provide Provisional pricing to supply all the Clay required for Cell 4 Construction. The CRD will make the determination whether to enact this provisional item within 30 days of Contract award.**
- Q8. How much deeper is grade?  
A8. **Various grade cut/fill are required to prepare the liner subgrade. See cut/fill heat map drawing 24-W1057-301 Rev A (IFT dated 2023-09-13). The subgrade surface shall be sloped to the design intent prior to laying the final aggregate drainage layers. Bidders should be aware that shaded areas cover a range of cut/fill. For example, the white shaded areas may require grading between -0.2m. to +0.2m. All fill material to achieve design subgrade shall be conducted with 75-150mm clear aggregate.**
- Q9. Which pile should be used for materials? The North East Stockpile? Will the CRD designate this?  
A9. **The Shot Rock pile shown on Drawing 24-W1057-107 is to be depleted first for making the required aggregates for Cell 4 Liner. Once depleted, the remaining shot rock for Cell 4 liner aggregates will come from the NW Shot Rock Stockpile. Shot Rock for Provisional item 12.02 (50mm minus operational aggregate) will come from the NW Shot Rock Stockpile.**
- Materials removed from the quarry for the purposes of this project (overburden, till, shot rock, garbage etc.) will go to designated areas determined by the CRD, but all contained within the landfill property boundaries. There will be no additional cost allowed for haul truck cycle times to access alternate stockpiles on the landfill property boundaries as designated by the CRD Engineer.**
- Q10. The posting on BC Bid does not allow for E-Bidding submissions, can you clarify the method for electronic submissions?  
A10. **Submissions can be sent electronically to [PurchasingFMES@crd.bc.ca](mailto:PurchasingFMES@crd.bc.ca). Please refer to "Instructions to Tenderers" - Section 3.0 Submitting The Tender for electronic submission requirements.**
- Q11. Is the intent that all excavated material will be retained within the landfill and all gravel will be produced from existing shotrock piles (except for 25-50mm round washed stone)?  
A11. **Correct, that is the intent. Excavated material will be retained on Hartland Landfill Property in a designated stockpile by the CRD Engineer. All aggregates will be made from onsite Shot Rock, except for the 25-50mm round washed stone which the Contractor will supply.**

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.1

---

- Q12. What are the approximate volumes of the NW and NE shot rock stockpiles? Or more simply, can we assume there will be enough material between the Cell 5a shot rock stockpile, the NW stockpile and the NE stockpile to accommodate all non-import gravel needs for this tender?
- A12. **The Tenderer can assume there is sufficient shot rock in the NW shot Rock stockpile to satisfy all crushing requirements for this contract.**
- Q13. For items 5.01 and 5.02 on the schedule of prices – is the intent that bidders price item 5.01 assuming that drilling/blasting is a requirement, and to price item 5.02 as only requiring ripping/breakers?
- A13. **The contractor shall determine the method of excavation. The CRD does not have a preference whether the contractor utilizes blasting, ripping or hydraulic rock breaking techniques to achieve the sub grade surface.**
- Q14. For provisional item 2 – can we assume that the 45000 m3 would come from existing onsite shotrock stockpiles if this item is required?
- A14. **Yes, Shot Rock for Provisional item 2 (50mm minus) will come from the existing NW Shot Rock Stockpile.**
- Q15. Reference drawing 313 – Does existing manhole DMH0025 require the 12 oz non-woven geotextile, 200mm 20 MPa in situ concrete slab and 12.5mm clear crush gravel to be placed below it? Or can we assume this was already done when it was originally installed.
- A15. **No, the existing manhole does not need the addition of geotextile. The Contractor must conduct all work to tie-into the manhole, not to reconstruct DMH0025.**
- Q16. Are there any geotechnical reports available?
- A16. **No, none available.**

**ATTACHMENTS:**

**PRE-TENDER MEETING MINUTES AND SIGN-IN SHEET**

The meeting minutes and sign-in sheet from the Tuesday, September 26, 2023 mandatory pre-tender site meeting are attached to this Addendum No. 1.

**DRAWINGS**

Revised Specifications Schedule 2 attached hereto.

DATE

**CAPITAL REGIONAL DISTRICT**  
**HARTLAND LANDFILL**  
**CONSTRUCTION SERVICES CELL 4 LINER - INVITATION TO TENDER**  
**CONTRACT 30.22.06-03**

**PRE TENDER MEETING AGENDA**

Tuesday, September 26, 2023 at 11:00 a.m.  
Hartland Learning Centre, 1 Hartland Avenue

**PRESENT:** See attached Sign-In Sheet (3 pages)

**CRD STAFF:** Ian Wiebenga (chair)  
Luke Novy, Jake Soepboer, Drew Fafard, Chaz Whipp, Anna Keevil, Rob Storie

The meeting was brought to order at 11:00 a.m.

**1. INTRODUCTIONS / SIGN-IN**

- Safety Orientation for the day.
- Chaz Whipp to introduce and discuss procurement process.

**2. Contract Details**

- This tender is for the procurement and installation of the Hartland Landfill Cell 4 sub-liner subgrade excavation preparation, the sub-liner Pore Pressure Relief System drainage layer and piping system, GCL and HDPE liner and the above-liner leachate collection system drainage layer and piping system, including tie-ins to existing water and leachate infrastructure.
- The largest components of this tender are aggregate production and placement, clay placement, Geo textile installation, HDPE piping and GCL/HDPE Liner installation.
- Most of the blasting has been completed to achieve the subgrade surface. However, excavation of fractured rock/bedrock is required. The contractor will determine the best method for excavation (blasting or hoe-ramming etc).
- The tender closes at 2:00:00 pm local time on Friday, October 13, 2023.
- Tenderers should read the Tender submittal and evaluation requirements and ensure their bid includes all evaluation information required to be considered. The lowest or any tender will not necessarily be accepted. The Owner reserves the right in its absolute discretion to accept the tender which it deems most advantageous to itself and favourable in its interests and the right to waive informalities in and reject any or all tenders.
- You will note: the Schedule of Prices and Estimated Quantities, Scope of Work (Specifications) and Payment items have been organized the same. Additional quantities are shown in Schedule 3 of the Specifications to assist bidders. However, Contractors must verify all quantities and include costs for anything that is missing and required to complete the work for all unit rate and lump sum pricing submitted.
- Aggregate quantities have been estimated in the tender documents but are not a pay item. The Contractor is responsible to verify and account for sufficient aggregate to complete the liner drainage layers and aggregate required for backfill and road construction.

- All work must be completed by September 30, 2024. There are also some project milestones for material delivery, completion of the Sub Liner drainage blanket, the start of liner installation work and completion of aggregate production.
- There is a liquidated damages clause for each calendar day beyond Sept 30, 2024.
- The Contractor is responsible for all aspects of safety in the work area. If the Contractor proposes to blast any areas, it must produce a blast plan signed and sealed by a qualified engineer for review and comment by the CRD's Engineer prior to scheduling the work. The Contractor is responsible to protect the work area and adjacent work areas including the active face of the landfill, and ensuring no damage to nearby Residuals Treatment Facility, existing site infrastructure and the adjacent Regional Parks bike trails.
- Most roads at the landfill can accommodate truck traffic and the shortest haul routes will be accommodated where possible. The site is ever-changing and traffic re-routing may be required as necessary.
- Traffic control is the responsibility of the contractor including additional signage and flaggers when required.
- Dust control, snow/ice clearing, and road maintenance caused by Contractor's equipment are the responsibility of the contractor.
- Provisional Item 1: Supply, transport and stockpile up to 6777 m<sup>3</sup> of clay (if accepted by the CRD). Clay must be clean of contaminants and there are some performance criteria/tests that need to be submitted for the CRD to review before approval for use can be made.
- Provisional Item 2 for crushing and stockpiling of up to 45,000m<sup>3</sup> of 50mm minus aggregate for use by Landfill Operations. If not accepted, the CRD may tender separately at the Owners discretion.
- There are groundwater wells adjacent to the work area and in 5 corners intersection that the CRD would like to keep intact. We will work with the contractor to try to achieve this goal.
- The Contractor is responsible to provide third party aggregate sieve analysis and compaction testing at the frequencies outlined in the Specifications. The CRD's Engineer will review testing results.
- As Built drawings and survey markups will be required for this project.

### **3. Materials Supplied by Owner**

- The Shot Rock materials will be supplied by the CRD. Shot rock in the Cell 5a area will be depleted first, followed by the existing shot rock stockpiles located on the NW or NE of the project.
- Clay is provided by the CRD. Clay will be provided by the Contractor if the CRD elects to accept the tendered provisional item.
- The CRD has some precast sump/manhole barrels and lids that can be utilized. It is up to the Contractor to verify they meet the design specifications and are compatible with materials being supplied by the Contractor. No additional cost will be awarded to the contractor to offset cost to procure materials if the contractor later determines the barrels are not useable.

### **4. Hours of Operation**

- 7:00 am to 5:00 pm Mon-Fri. The Contractor can come on site (but not start work) at 6:30 am and must be off site by 5:15 pm each day. Blasting is to be scheduled for 5:15 pm each working day unless approved otherwise by the Owner.

- On Saturdays, the work day is from 7:00 am to 2:00 pm with access from 6:30 am and must be off site by 2:30 pm (but no blasting will be allowed on Saturdays).
- All staff must sign on and off site each day.
- Work or access outside these hours is only allowed upon written approval by CRD.

#### **5. Site Safety**

- The Contractor is required to have an approved Site Specific Safety Plan in place prior to and during work on-site that reflects all the project requirements including a silica dust control plan.
- There is no smoking allowed on-site
- The Contractor's sub-contractors must meet the WorkSafeBC compliance requirements to work on our site.

#### **6. Questions and Answers**

Please refer to the Questions and Responses section in the Addendums.

#### **7. Walking Tour**

- Tenderers are invited (not mandatory) to view the construction area.

**TO ALL RESPONDENTS**

Dear Sir/Madam:

**RE: CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
NO. 30.22.06-03  
– ADDENDUM NO. 2**

In accordance with the provision contained in the "Instructions to Tenderers" for Contract No. 30.22.06-03, Addendum No.2 is hereby issued, and a copy attached.

Yours truly,

Ian Wiebenga, P. Eng.  
Facilities Management & Engineering Services  
Parks & Environmental Services Department

IW/ak

Attachment(s): 1

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.2

---

TO ALL RESPONDENTS:

This letter shall serve as confirmation that the revisions included herein as Addendum No.2 shall form part of the Contract Documents for Contract 30.22.06-03.

**ADDENDUM NO.2**

Revise the Contract Documents as follows:

Add item x. to Specifications Section 3.1 as follows:

x. Clay plugs and key trenches have been incorporated in the Cell 4 Expansion Area to achieve separation between groundwater and leachate. Details for the clay plugs and trenches are provided on the following drawings:

- North and South Clay Plug Drawing 24-W1057-316
- Pressure Relief #3 Clay Plug Drawing 24-W1057-309
- Clay Berm Key Trench Drawing 24-W1057-306

To prevent mixing of groundwater a water tight seal to component bedrock is required. Prior to placement of clay all shot rock and loosened blast rock is to be removed from these areas with an excavator so that a solid bedrock surface is exposed. Areas detailed are to be dewatered by pumping and all loose material is to be removed from the excavation. All loose material shall be removed with a vac truck or with a mini excavator with a small cleanout bucket. The cleaned out surface shall be inspected and approved by the Owner's representative prior to placement of clay.

The larger North and South clay plugs are to be dewatered, with all loose rock, fines and sediment removed with an excavator. Any fines shall be removed with a mini excavator or washed with a high pressure hose from a trash pump. The cleaned out surface shall be inspected and approved by the Owner's representative prior to placement of clay.

**QUESTIONS AND RESPONSES**

- Q1. Is there a requirement to have 25-50mm washed gravel pipe surround for the two stretches of PRS piping and one LCS pipe that extends east of the Cell 4 Clay berm? Or is it only pipe bedding? Also would any bedding even be required for the LCS pipe as it's positioned on a temporary soil notch.
- A1. The PRS (DWG 24-W1057-314) and LCS (DWG 24-W1057-314) pipes located outside of the Cell 4 liner limits are temporary and will be repositioned during construction of Cell 5A, and hence there is no clear 25-50 mm round stone required. Estimated design quantities of round stone have been revised from 3,630 m<sup>3</sup> to 2,640 m<sup>3</sup> (1,075 m<sup>3</sup> for the PRS, Item 8.029 and 1,565 m<sup>3</sup> for the LCS, Item 10.02).

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.2

---

Q2. Clay 4 berm - is the volume of 4,437 m<sup>3</sup> provided in the tender documents for item 7.011 only inclusive of the lower clay berm that has a crest width of 4.0m? It appears that the crest width in the proposed linework for the clay berm on Drawing 24-W1057-316 measures about 4m. If this is the case, then the total clay berm volume would be more than 4437 m<sup>3</sup>.

A2. The Cell 4 Clay berm volume calculated on the heat map on Drawing 24-W1057-316 is the volume up to the 4 m width below the geomembrane liner. It does not include the clay berm above the geomembrane liner on Drawing 24-W1057-306. The additional clay volume represented by this polygon is 180 m x 5.4 m<sup>2</sup> = 972 m<sup>3</sup>. Increase the clay berm volume from 4,437 m<sup>3</sup> to 5409 m<sup>3</sup> in worksheet item 7.011. Increase the quantity of Provisional Item 2 on the Schedule of Tendered Prices and Estimated quantities from 6,777 m<sup>3</sup> to 7,749 m<sup>3</sup>.

The CRD intends to reissue the Schedule of Prices and Estimated Quantities and Provisional Items Tender forms to reflect changes in quantities identified in all addendums. Tenderers can expect the updated table no later than October 6, 2023. Tenderers shall use the revised form to submit their bid.

Q3. For items 9.025/9.026 on the estimated design quantities table - can you please reference the specific detail on the drawings this refers to?

A3. This is the anchor trench for the outside of the HDPE geomembrane liner which is denoted by the red squiggly line in the Schedule 1 drawings. Details that show the work are AA/302, H/306, L/312. Note that the bentonite cliff edge seal requires a different anchor trench as shown on Drawing 24-W1057-309, which is not included in this item as it is paid as a Lump Sum under 9.02.

Q4. Reference detail on drawing 312 (anchor trench detail). It notes that the gravel for this anchor trench is to be minus 19 mm crush. However is the intent for this to be 12.5mm minus reject?

A4. Yes, the intent is to be 12.5 mm minus reject. Contractor shall account for this material in their aggregate production.

Q5. Could you confirm the location of section 00 51 00 subsection 1.03 in the tender documents as called up in scope item 5.04 and 9.03?

A5.

**In reference to Specifications – Scope of Work Item 5.04**

Delete:

“All labor, equipment and materials required to crush, screen load, haul and place the LCS Aggregate Drainage Blanket. Scope to include all labor, handling, equipment, and all other incidental work required to process, crush, screen and stockpile blasted shot rock to produce aggregate layers for use on site as per the Contract Documents. Also includes loading, hauling and stockpiling in a manner acceptable to the engineer and as specified in Section 00 51 00 Part 1.03 C of all the screened products. Also includes all cost associated with QC testing as specified in Section 00 51 00 Part 1.03 C. Drainage blanket includes the following work:”

Replace with:

“All labor, equipment and materials required to crush, screen load, haul and place the LCS Aggregate Drainage Blanket. Scope to include all labor, handling, equipment, and all other incidental work required to process, crush, screen and stockpile blasted shot rock to produce aggregate layers for use on site as per the Contract Documents. Also includes loading, hauling and stockpiling in a manner acceptable to the engineer and as specified in Technical Specifications - Section 31 05 16.01 to 16.08 for of all the screened products. This also includes all cost associated with QC testing as outlined in the Technical Specifications. All of the drainage materials in the PRS and LCS, excluding pipe bedding, are to be placed loose without compaction. QA/QC that will be conducted will be finished layer thickness and materials meeting gradation specifications (must be free of fines). Also, materials must be placed in a way that protects underlying membrane and pipes. Drainage blanket includes the following work:”

**In reference to Specifications – Scope of Work Item 9.03**

Also, materials must be placed in a way that protects underlying membrane and pipes. Drainage blanket includes the following work:"

- Q7. Is it anticipated that there will be any traffic flagging requirements for our scope?
- A7. The need for traffic flaggers is not anticipated for Cell 4 Liner Construction given public access to the area is limited. Most traffic management during Cell 4 construction can be accomplished by Contractor provided signs, as required, to notify adjacent work areas of changing traffic patterns related to the Contractor's work.

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

TO ALL RESPONDENTS:

This letter shall serve as confirmation that the revisions included herein as Addendum No.4 shall form part of the Contract Documents for Contract 30.22.06-03.

**ADDENDUM NO.4**

Revise the Contract Documents as follows:

Note that the Leachate Clean Out lines for the LCS system have been changed from 600 mm HDPE DR-11 Solid to 300 mm HDPE DR-11 Solid. This change was already accounted for in the Schedule of Quantities, but not on the drawings. On the IFC drawings 303 and 310, first 85 m on LCCO1, first 95 m on LCCO2 and first 50 m on LCCO5 will change from 600 mm to 300 mm. An eccentric 300 to 600 mm Reducer will be required on each line.

**QUESTIONS & RESPONSES**

**Q1.** Can there be an extension to the closing date?

**A1.** No, due to schedule requirements there will be no extension to the closing date.

**Q2.** There were a few items where our takeoff was quite a bit different. I am hoping you can confirm if the takeoffs in the tender documents are correct.

Item 7.013 - ESC blanket – we came up with 3000 m<sup>2</sup>. (assumed 16m wide as per page 306 \* 185m long)

**A2.** The 3D area, assuming entire downstream face of berm and 4 m upstream of Centre Line will be covered is 2,074 m<sup>2</sup>. Estimated design quantity has been revised from 1,452 m<sup>2</sup> to 2,074 m<sup>2</sup> (Item 7.013)

**Q3.** Item 7.014 – 12.5mm Reject on east side of clay berm – we came up with 740 m<sup>3</sup> (assumed 185m long \* 2m wide \* avg 2m tall)

**A3.** 3D area of berm surface, to be covered by 2 m (horizontal width as shown on detail H/306) of Minus 12.5 mm Crush, measured from 3 m downstream of centre line is 913 m<sup>2</sup>. The perpendicular thickness of the 12.5 mm Crush on this surface is 1.0 m. Thus the design volume is 913 m<sup>3</sup>. Estimated design quantity has been revised from 1,540 m<sup>3</sup> to 913 m<sup>3</sup>

**Q4.** Item 8.011 – 75-150mm drain rock on top of pipe surround in trenches – we came up with 1960 m<sup>3</sup> (assumed avg cross sectional area of 2.7 m<sup>2</sup> as shown on pages 308 and 309 \* 490 LM for PR1/2 and 4.5m<sup>2</sup> \* 150 LM for PR3)

**A4.** Cross section area for PRS1, PRS1A and PRS2 is 2.6 m<sup>2</sup>. Total length of trench based on profiles is as follows: PR1A length (138 m) PR1B length (243 m) PR2 Length (94 m). Total is 475 m. Cross Section Area for PR3 is 2.27 m<sup>2</sup> and PR3 Length (151 m). Note portion of solid pipe is outside trench, will not need the fill. Total volume calculated on above lengths and areas is 1,578 m<sup>3</sup>. Estimate design quantities have been revised from 1,410 to 1,578 m<sup>3</sup> (Item 8.011).

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

**Q5.** Item 8.016 – 12.5mm pipe bedding – should the provided quantity be increased to account for the portion of PR1 pipe where the pipe invert appears to sit 0.45m above trench subgrade:  $5\text{m} \times 0.35\text{m extra} \times 200\text{ LM} = 350\text{ m}^3$ . See dwg 303-A.

**A5.** The design depth of trench is being investigated. The bottom surface will be adjusted upwards in the affected area of the trench in the IFC drawings.

**Q6.** Reference the below screenshot for the HDPE Geomembrane material as well as the attached GRI GM 13 standard (see page 8 and 9 of 11). As noted in page 8 of the attachment, the specification for “smooth” geomembrane matches the screen shot below. However the drawings call for a “textured” geomembrane, which has different property values as shown on page 9 of the attachment. Can you please confirm if we are to price using the properties shown on page 9 of the attachment which would be for a textured geomembrane?

**A6.** The geomembrane specification has been updated to reflect latest GRI recommended values. Please see updated table below, with reference values for textured geomembrane. Also note additional shear strength requirements in this addendum to ensure geomembrane achieves acceptable factor of safety against slippage on the 2.5H:1V slope.

| Property                | Value Required         | Test Method       | Standard  |
|-------------------------|------------------------|-------------------|-----------|
| Thickness               | 1.5 mm (60 mils)       | ASTM D5994        | Min. Ave. |
| Formulated Density      | 0.94 g/cm <sup>3</sup> | ASTM D1505/D792   | Minimum   |
| Yield Strength          | 22 kN/m                | ASTM D638 Type IV | Minimum   |
| Break Strength          | 16 kN/m                | ASTM D638 Type IV | Minimum   |
| Yield Elongation        | 12%                    | ASTM D638 Type IV | Minimum   |
| Break Elongation        | 100%                   | ASTM D638 Type IV | Minimum   |
| Puncture Resistance     | 400 kN                 | ASTM D4833        | Minimum   |
| Tear Resistance         | 187 kN                 | ASTM D1004        | Minimum   |
| Carbon Black Content    | 2 - 3%                 | ASTM D1603        | Minimum   |
| Carbon Black Dispersion | 1 or 2                 | ASTM D5596        | Minimum   |
| Stress Crack Resistance | 500                    | ASTM D5397        | Minimum   |

**Q7.** Please also confirm if the geomembrane has an absolute/minimum 60mil (1.5mm) thickness or nominal 60mil (1.5mm) thickness.

**A7.** Per D5994 average minimum thickness requirement for textured geomembranes, 8 out of 10 thickness tests on roll are to be within 10% of specified thickness and all 10 tests must be within 90% of specified thickness of 1.5 mm.

FILE 30.22.06-03  
ADDENDUM NO.4

---

**Additional Strength Requirement for HDPE Geomembrane:**

To achieve performance requirements, the HDPE geomembrane shall meet or exceed the specifications listed below. The shear strength between the membrane and all other interface materials (such as geotextile or GCL) shall exceed 6.0 kPa at a normal stress level of 10.0 kPa and 16.0 kPa at a normal stress of 30 kPa. Additionally, the peak internal angle of friction between the membrane and all interfaces shall exceed 28° and adhesion shall exceed 1.5 kN/m<sup>2</sup> at the normal stress range 5 kPa to 80 kPa.

**Q8.** The estimated design quantity provided for the GCL for PRS-1 (2,100m<sup>2</sup>) appears to be significantly higher than the area indicated on drawing 305. Should pricing be based on the estimated design quantities provided? If so, where should bidders assume the additional GCL will be?

**A8.** There are several other areas that GCL will be placed on the project, including lining of PR1 Trench between stations 155 and 215 as outlined by cyan polygon on DWG305, and lining of PR3 Trench as detailed on D309. It should be reiterated the table of estimated design quantities and take-offs is provided by the Engineer to assist Contractors in formulating their lump sum bids and unit rate costs. The material quantities outlined in the table do not account for construction loss (off-cuts) and field fitting etc. The list is not a complete list of all the materials the contractor will require to construct the improvements. The Contractor shall verify quantities and materials to ensure they account for all materials required to meet the final construction requirements for Cell 4. The Tenderer shall refer to the Specifications and Drawings for a description of the work to be involved in each item.

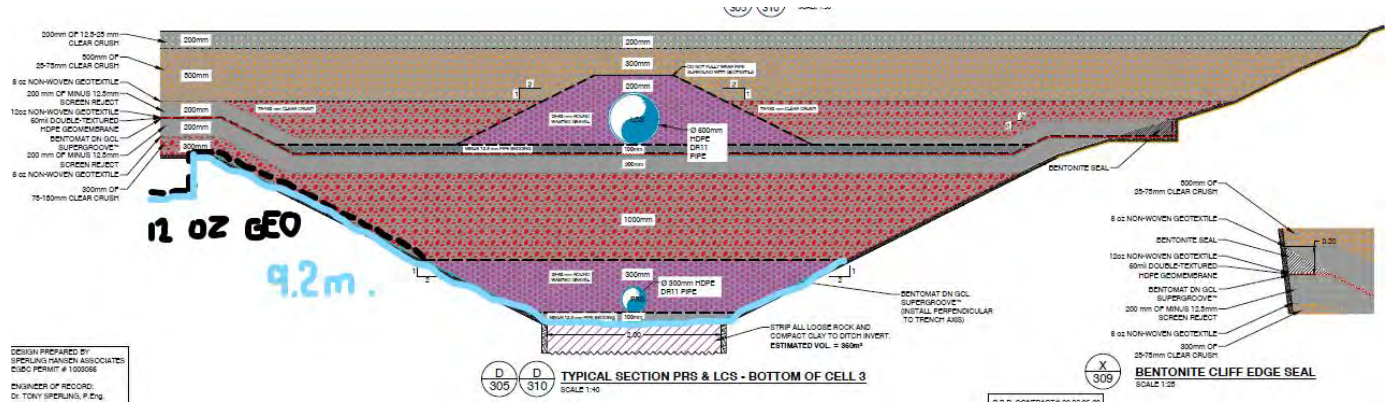

**Q9.** Does the estimated design quantity provided for the GCL for PRS-3 (1,920m<sup>2</sup>) include the material needed for the anchor trench shown on drawing 309 Detail D?

**A9.** Yes, procurement of the GCL of  $160 \times 12 = 1,920 \text{ m}^2$  of GCL is included in the total GCL under item 9.012. Please see below modified detail D/309. This modified detailed results in an additional  $4.0 \times 160 = 640 \text{ m}^2$  of geotextile. The estimate design quantity for the supply of the 12 oz geotextile (Item 9.014) has been increased by 640 m<sup>2</sup> to accommodate this change.

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

**Q10.** The description for the estimated design quantity for the GCL for PRS-3 states has a station range of 0+00 to 1+00, but drawing 305 shows a station range of 0+000 to 0+150. Please clarify which is correct. If the station range is only 0+000 to 0+100, the estimated design quantity provided would appear to be too high.

**A10.** The description is not correct. The design length of GCL is for the complete length of PR3 at 160 m to avoid infiltrating the captured leachate.

**Q11.** Please provide a cross section on PRS-1 between stations 0+150 and 0+220.

**A11.** See below. Detail A/308 is modified with the entire trench being lined with GCL as the first layer and then protected by extending the 12 Oz bedding layer geotextile up the side slopes. As shown on DWG316, the GCL area is  $60 \times 14.75 = 885 \text{ m}^2$ . Estimated design quantity for GCL installation have been revised from  $2,100 \text{ m}^2$  to  $885 \text{ m}^2$  (Item 8.031) and for supply from  $32,341 \text{ m}^2$  to  $32,026 \text{ m}^2$  (Item 9.012). Per the detail below, an estimated additional  $1050 \text{ m}^2$  will be needed. The estimate design quantity for the supply of the 12 oz geotextile (Item 9.014) has been increased by  $1050 \text{ m}^2$  to accommodate this change.

FILE 30.22.06-03  
ADDENDUM NO.4

**Q12.** Are all fittings, including vertical and horizontal bends, required for Pore Pressure Relief System and Leachate Collection System included in the Estimated Design Quantities? There appear to be more bends shown on the drawings than listed in the quantities.

**A12.** Engineer has reviewed count for elbows and wyes. Updated parts list for PRS and LCS is reflected in an updated schedule of quantities that will be provided. The following changes are being made.

|       |  |      |    |
|-------|--|------|----|
| 8.02  | Procurement and Delivery of PRS Piping |      |    |
| 8.024 | Supply 300 mm Tees for PRS             | each | -  |
| 8.025 | Supply 300 mm 22.5 Elbows for PRS      | each | 11 |

|              |   |      |   |
|--------------|---|------|---|
| <b>10</b>    | <b>Cell 4 Leachate Collection System Procurement and Installation</b> |      |   |
| <b>10.01</b> | <b>Procure and Deliver Leachate Collection System Piping</b>          |      |   |
| 10.001       | Supply 300 mm 22.5 DR 11 HDPE Elbows                                  | each | 6 |
| 10.002       | Supply 300 mm 45 DR 11 HDPE Elbows                                    | each | 2 |
| 10.003       | Supply 300 mm - 600 mm HDPE DR 11 Eccentric Reducers                  | each | 3 |
| 10.014       | Supply 600 mm Wyes (45)   | each | 1 |
| 10.016       | Supply 600 mm 22.5 Elbows   | each | 5 |
| 10.017       | Supply 600 mm 45 Elbows   | each | 4 |

**Q13.** Please provide a detail for the temporary conveyance PRS pipe.

**A13.** The Temporary PRS pipe is to be laid on a bedding layer in the middle of the PRS 1C and PRS 3C trenches. A temporary trench for conveying the PR2 pipe from the valve downstream of the Cell 4 clay dam to the Wye on PRS 1C is to be excavated.

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

**Q14.** Ramps on drawings 303, 303A, and 303B, what material is to be used for pipe supporting fill?

**A14.** Use Minus 200 mm Shot Rock for rough grading, to be covered with 100 mm plus of pipe bedding.

**Q15.** Please provide details for the culvert shown near station 0+100 on PRS-3 on Drawing 305. Confirm this culvert is incidental to item 8.03.

**A15.** Culvert is a temporary pipe to be installed by Contractor if required for conveying leachate in PR3 ditch under a temporary road crossing until construction of lined PRS system is completed. 600 CMP or 600 mm DR11 HDPE pipe shall be utilized. Once PR3 is constructed, the PR3 Ditch shall be constructed per detail D/309 and the permanent 140 Bench access road can be developed on top of the completed PRS/LCS system.

**Q16.** On drawing 307, the sections show 75-150mm clear crush underneath the 12.5-25mm clear crush. This is not the case in other cross sections. The legend of the 75-150mm clear crush in this case is orange, instead of red.

**A16.** The second layer down from left, shown orange on details E/307, F/307 and G/307 is mis-labelled. Currently, it reads 75-150 Clear Crush. Please change to 25-75 mm Clear Crush.

**Q17.** On drawing 305, what does the dark grey dashed line between stations 0+000 to 0+100 surrounding PRS-3 represent?

**A17.** That is a residual line of the planned extents of GCL. Subsequently, it was decided to line the entire PRS 3 trench with GCL and the GCL limits were outlined with the cyan dot polyline on DWG 305. The line dashed grey line will be deleted from the IFC's.

**Q18.** On drawing 309, the cross section indicated that the 300mm HDPE pipe is fully wrapped with the 12 oz geotextile. Confirm that this is correct since the other cross section show otherwise.

**A18.** This is intended as designed. Unlike the other PRS trenches to which a large drainage area will report, this trench is almost fully lined with GCL and will only receive seepage from the side of a rock face beneath cell 3. Most leachate will be picked up by the overlying LCS system. Hence, there is far less potential for clogging of this PRS pipe.

**Q19.** Is there an option to utilize 25-37.5 washed clear crush instead of the 25-50mm round washed gravel for the pipe surrounding the LCS and PRS? There would be significant cost savings.

**A19.** No. The pipes will be under very large loads once the landfill is built out to full height and must have a service life of several hundred years. Therefore, round rock has been selected to minimize risk of pipe damage due to point loads causing localized stress on pipes.

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

**Q20.** For provisional item 12.02, which shot rock stockpile will be used as a source for producing this material? There is a significant difference in cost to haul to the Triangle 2" Minus Stockpile from the Northeast Shot Rock Stockpile vs the Northwest Shot Rock Stockpile.

**A20.** Please see response to Question #9 in Addendum 1.

**Q21.** For the shotrock production, is the assumption that we will be crushing the pile at the Phase 3 stockpile first, and then the NW corner stockpile, and then the NE stockpile if need be?

**A21.** Please see response to Question #9 in Addendum 1.

**Q22.** Can the cell 5A area be reprofiled to accommodate stockpiling if the existing ground will be reinstated by the end of this project?

**A22.** Scope of Work Item 3.2.5. Aggregate Production c. outlines a response to this question.

*"There is no additional aggregate stockpile space, other than the working area in the future Cell 4 and Cell 5A areas to produce and stockpile crushed aggregate. It is the responsibility of the Contractor to manage the site logistics of crushing, quality control, stockpiling and aggregate placement within the Cell 4 and Cell 5A liner working area. Upon completion of Cell 4 Liner Construction, the Contractor shall remove all excess stockpiles to an area on Hartland Landfill property as designated by the CRD Engineer, away from the future Cell 5A liner work area."*

In addition, No stockpiles shall be placed on top of previously landfilled garbage or on top of any existing CRD infrastructure.

**Q23.** If there is a surplus production of gravel, will the excess be paid for?

**A23.** Excluding the unit rate item for production of aggregate to fill the quarry floor (Item 5.03) no payment will be provided for excess gravel production. Any aggregate production that is incidental to the needs of this contract shall be loaded, transported and stockpiled to an area designated by the CRD Engineer within the Landfill Property boundaries. No additional cost will be awarded to the contractor to remove excess aggregates from Cell 4 and Cell 5a project work areas upon completion of the contract.

**Q24.** If the quantities change substantially (over 15% difference), will there be a Change Request to accommodate this?

**A24.** The contract pay items have been structured to accommodate variability in material volumes for Cell 4 Final Grading (Item 5) and Clay Seal and Key Trenches (Item 6) with unit rate amounts. For items where the design volumes are well established; Clay Toe Term (Item 7), Cell 4 Liner (Item 8) and Pore Pressure and Leachate Systems (Items 8 and Item 10), lump sum pricing is required. Contractors shall include all materials, incidentals, labor and equipment under each respective pricing mechanism to ensure their

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

costs are covered. No additional costs will be allowed for items shown or described in the drawings, specifications, and addendums.

**Q25.** The zero percent passing the 2.5mm sieve on the 25 to 75mm clear, and the 2.5mm sieve on the 75 to 150mm clear are not attainable without washing. Do you want the rock to be washed? If yes, will this be on site where the crushing is taking place?

**A25.** No, washing of rock will not be required, but the fines content must be maintained at an absolute minimum for the clear products. The maximum allowable fines has been revised to 2% passing 4.75 mm screen and 1% passing 0.08 mm screen. The gradation curves on 24-W1057-601 and 24-W1057-602 will be updated accordingly as part of the Issued for Construction (IFC) Drawing Package.

**Q26.** The specification on drawing 601 for the 12.5 to 25mm clear crush suggests 16mm x 4.5mm, not the 25mm. Please confirm.

**A26.** The gradation will be adjusted to 100% passing 25 mm and maximum 4% passing 12.5 mm, 2% passing 4.75 mm and 1% passing 0.08 mm clear product. The gradation curves on 24-W1057-601 and 24-W1057-602 will be updated accordingly as part of the Issued for Construction (IFC) Drawing Package.

**Q27.** If submitting the tender by email. Can the bid bond and consent of surety be sent as a copied PDF or is there a specific requirement for the bid bond delivery?

**A27.** As stated in the Tender, Tenders submitted electronically shall be complete and saved in one PDF file marked with the Tender number and name of Tenderer (other than any electronic bid bond or consent of surety, which must be provided in separate files). Tenders submitted electronically can submit the bid security required under section 2.1 separately by mail or courier, provided that all required documents are received prior to the time set for closing of tenders. Alternatively, tenders submitted electronically can be accompanied by an electronic bid bond and electronic undertakings of surety. The electronic bid bond must meet all the requirements specified in section 2.1, and the Surety Association of Canada's criteria for electronic bonds.

**Q28.** Can the provisional item for clay supply(12.01 of tender form) be removed from the total tender price? If a contractor does not have a clay source, it could unfairly eliminate them from the tender process.

**A28.** No the provisional item can't be removed as it is a required price submittal to be considered complete. As outlined in Section 4 Instruction To Tenderers any tender which is incomplete, conditional, obscure or contains erasures, alterations, escalator clauses or irregularities of any kind may be rejected by the Owner as an irregular tender.

**Q29.** The specified gradations for some of the aggregate products do not appear to line up with the descriptions. For example, the "12.5-25mm Clear Crush" gradation shows 100% passing the 16mm sieve and up to 90% passing the 12.5mm sieve, which would result in a typically smaller aggregate size than 12.5-25mm. Similarly, the 75-150mm

Making a difference...together

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
FILE 30.22.06-03  
ADDENDUM NO.4

---

Clear Crush allows up to 30% passing the 75mm sieve. Can you please confirm that the specified gradations for each aggregate product are correct?

**A29.** The gradation charts and curves provided on 24-W1057-601 and 24-W1057-602 are correct, excepting the following:

- Revised maximum allowable fines passing (per Q/A #25 of this addendum )
- Revised gradation for the 12.5 to 25 mm (per Q/A #26 of this addendum)

**Q30.** Assuming the 12.5mm reject, 12.5-25mm clear, 25-75mm clear, and 75-150mm clear gravels are all created at the same time, with productions of each that can be adjusted within reason, we will still likely have excess volumes of some gravels in order to create the full volume of other gravels. Is the intent that we would be paid extra for these "surplus" materials? Or would this be considered incidental?

**A30.** Refer to Q/A #23 of this addendum.

**Q31.** Reference Sheet 601 – gradation curve for 12.5-25mm clear. The 19mm and 16mm sieves each show 100% passing. Would the intent be that these would both be less than 100% as the name suggests up to 25mm sizing?

**A31.** Refer to Q/A #26 of this addendum.

**SCHEDULE OF PRICES AND ESTIMATED QUANTITIES**

For the purpose of comparison of tenders and for subsequent payment, the Tenderer shall break down the Total Tendered Amount into the following items of work. The cost of work not specifically mentioned in this Schedule but included in the Drawings and/or Specifications, either directly or by implication, are to be included in the item to which it is most applicable. The Tenderer shall refer to the Specifications and Drawings for a description of the work to be involved in each item. The CRD has provided a worksheet of design quantities to assist Contractors in formulating their lump sum bids and unit rate costs. This worksheet can be found in Appendix E.

**CELL 4 LINER SYSTEM**

| Item      | Description   | Units    | Qty(1) | Rate | \$Amount |
|-----------|---|----------|--------|------|----------|
| <b>1.</b> | Mobilization and Demobilization<br>(not to exceed 5% of total tender amount)  | Lump Sum | n/a    | n/a  |          |
| <b>2.</b> | Bonding and Insurance<br>(not to exceed 2% of total tender amount)  | Lump Sum | n/a    | n/a  |          |
| <b>3.</b> | Health & Safety Plan  | Lump Sum | n/a    | n/a  |          |
| <b>4.</b> | Leachate, ground water and surface water dewatering to begin 14 days from Notice to Proceed until June 30, 2024.                  | Lump Sum | n/a    | n/a  |          |
| <b>5.</b> | <b>Cell 4 Final Grading</b>   |          |        |      |          |
| 5.01      | Drilling, Blasting, Excavation, Haul to Stockpile and Final Smooth Grading (Depths greater than 1.0 m) within PRS Trenches        | m3       | 9,435  |      |          |
| 5.02      | Shallow Rock Excavation using Ripping and Pneumatic Breakers (Depths less than 1.0 m) from Quarry Floor                           | m3       | 1,631  |      |          |

| <b>Total Tender Amount (A + B) Place on Page 23</b> |  |                |        |      |          |

The Tendered Price will represent the entire cost excluding GST to the Owner of the complete Work based on the estimated quantities in the Schedule of Quantities and Prices of the Form of Tender. Notwithstanding the generalities of the above, tenderers shall include in the tendered prices (including unit prices, lump sum prices, or other forms of pricing) sufficient amounts to cover:

- a) The cost of all labour, equipment and material included in or required for the Work, including all items which, while not specifically listed in the Schedule of Quantities and Prices, are included in the Work specifically or by necessary inference from the Contract Documents;
- b) All assessments payable with respect to labour as required by any statutory scheme such as unemployment insurance, holiday pay, insurance, CP and all employee benefits and the Workers Compensation Act;
- c) All overhead costs, including head office and on-site overhead costs, and all amounts for the Contractor's profit

The tendered prices and all subcontracts must allow for compliance with all applicable laws regarding trade or other qualifications of employees performing the Work, and payment of appropriate wages for labour included in or required for the Work.

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER

CONTRACT 30.22.06-03

**PROVISIONAL ITEMS**

(not included in Tender Price)

This section forms part of the Contract Documents and is to be read, interpreted and coordinated with all other parts.

Provisional items quoted on will be reviewed and accepted or rejected at the Owner's option. Accepted provisional item prices will be identified in the construction agreement.

Final payment to the Contractor will be made for the actual quantities, only of work performed or materials furnished, in accordance with the plans and specifications as determined by measurements made by the CRD. It is agreed that the quantities of work to be done or materials to be furnished may be reduced and/or altered by the CRD and such alterations shall not be considered as a waiver of any condition of the Contract, or as invalidating any of the provision thereof, nor shall any changes be made in the Contract unit prices on account of such alterations, but the same unit prices shall apply as if no alteration had been made.

Coordinate related work and modify surrounding work to integrate the Work of each provisional item.

Prices quoted should not include GST.

| Total Tendered Amount Carried to Tender Form (page #16)                          | \$ |

---

SIGNATURE OF TENDERER

- NOTE: (1) The quantities listed in the Schedule of Prices and Estimated Quantities are approximate only and shall be used for the purpose of obtaining comparable Total Tendered Amounts only.
- (2) No payment of the contingency allowance shall be made unless authorized in writing by the Engineer prior to the commencement of such work. The contingency allowance shall be used for such work that is not included in the Contract Documents or Drawings and is deemed as an extra to the Contract. The Contractor shall have no claim for loss of profit or loss of anticipated revenue from this item. The contingency allowance stated in these documents must be included in the Total Tendered Amount.

This table of estimated design quantities and take-offs is provided by the Engineer to assist Contractors in formulating their lump sum bids and unit rate costs. The material quantities outlined in the table above represent do not account for construction loss (off-cuts) and field fitting etc. The list is not a complete list of all the materials the contractor will require to construct the improvements. The Contractor shall verify quantities and materials to ensure they account for all materials required to meet the final construction requirements for Cell 4. The Tenderer shall refer to the Specifications and Drawings for a description of the work to be involved in each item.

Aggregate and clay soil volumes represent a pure design, compacted volume and do not account for bulking loss during compaction, over excavation during construction, loss, road repair/fill, etc. The Contractor shall develop their own aggregate production volumes to ensure they account for all aggregate and clay soil required to meet the final design surfaces for all of Cell 4 construction.

|   |  |                |        |
|---|--|----------------|--------|
| 5 Cell 4 Final Grading  |  |                |        |
| 5.01  | Drilling, Blasting, Excavation, Haul to Stockpile and Final Smooth Grading (Depths greater than 1.0 m) within PRS Trenches   | m <sup>3</sup> | 9,435  |
| 5.02  | Shallow Rock Excavation using Ripping and Pneumatic Breakers (Depths less than 1.0 m) from Quarry Floor  | m <sup>3</sup> | 1,631  |
| 5.03  | Crush, Screen, Load, Haul, Place 75-150 mm Drain Rock in designated fill areas on Quarry Floor to reach design subgrade elevation                                  | m <sup>3</sup> | 1,745  |
| 5.04  | Loose Fill Excavation and Haul to Designated Stockpile Area (depths Variable) from Historic Stock Pile Areas   | m <sup>3</sup> | 7,048  |
| 5.05  | Subgrade Grading, Picking, Smoothing and Proof Rolling   | m <sup>2</sup> | 29,221 |
| 5.06  | Grading Fill in Stockpile Area to Support 140 m Bench Road   | m <sup>3</sup> | 965    |
| 5.07  | Deep Excavation and Backfill for Pipe Install at DMH-0025  | m <sup>3</sup> | 341    |
| 6 Clay Seals and Key Trenches                                     |  |                |        |
| 6.01  | Shot Rock Excavation for South Clay Seal   | m <sup>3</sup> | 1,200  |
| 6.02  | Compacted Clay Seal Placement on Quarry Floor in South Clay Seal and North Clay Seal   | m <sup>3</sup> | 1,800  |
| 6.03  | Excavate PR3 Key Trench  | m <sup>3</sup> | 360    |
| 6.04  | Place and Compact PR3 Clay Key Trench for first 90 m of collector  | m <sup>3</sup> | 360    |
| 6.05  | Excavate Toe Berm Key Trench for Clay Isolation Berm to Solid Bedrock  | m <sup>3</sup> | 180    |
| 6.06  | Place and Compact Clay in Toe Berm Key Trench Compact to min 95% MMPD in 300 mm lifts  | m <sup>3</sup> | 180    |
| 7 Clay Toe Berm   |  |                |        |
| 7.011   | Load Haul Place and Compact Clay to Construct Clay Isolation Berm. Compact to min 95% MMPD in 300 mm lifts   | m <sup>3</sup> | 5,409  |
| 7.012   | Construct Pipe Penetrations  | each           | 6      |
| 7.013   | Supply and Install Erosion Control Blanket   | m <sup>2</sup> | 2,074  |
| 7.014   | Crush, Screen, Load, Haul, and Place 2.0 m thickness of 12.5 mm Screen Reject  | m <sup>3</sup> | 913    |
| 8 Pore Pressure Relief System                                     |  |                |        |
| 8.01 Production and Placement of PRS Aggregates                   |  |                |        |
| 8.011   | Crush , Screen, Load, Haul, Place 75-150 mm Drain Rock on PRS-1, PRS-1A, PRS-1B, PRS-2 and PRS-3 alignment and PRS sump surround (excludes 300 mm over liner area) | m <sup>3</sup> | 1,578  |
| 8.012   | Crush, Screen, Load, Haul, Place 300 mm Thick 75 – 150 mm Clear Crush Over Liner Area (includes PRS Trenches)  | m <sup>3</sup> | 8,766  |
| 8.013   | Crush, Screen, Load, Haul, Place 300 mm Thick 25 – 75 mm Clear Crush Over Liner Area (includes PRS Trenches)   | m <sup>3</sup> | 8,766  |
| 8.014   | Install pre-purchased 8 oz. Non-woven Geotextile Separation Layer  | m <sup>2</sup> | 29,221 |
| 8.015   | Crush, Screen, Load, Haul Place 200mm Thick Minus 12.5mm Screen Reject for Lower Liner Cushion   | m <sup>3</sup> | 5,844  |
| 8.016   | Crush, Screen Minus 12.5mm Screen Reject for 100 mm Pipe Bedding along all PRS Pipes   | m <sup>3</sup> | 292    |
| 8.02 Procurement and Delivery of PRS Piping                       |  |                |        |
| 8.021   | Supply 300 mm DR 11 HDPE Solid Pipe for PRS  | LM             | 729    |
| 8.022   | Supply 300 mm DR 11 HDPE Perforated Pipe for PRS   | LM             | 564    |
| 8.023   | Supply 300 mm Wyes (45) for PRS  | each           | 2      |
| 8.024   | Supply 300 mm Tees for PRS   | each           | -      |
| 8.025   | Supply 300 mm 22.5 Elbows for PRS  | each           | 11     |
| 8.026   | Supply 300 mm 45 Elbows for PRS  | each           | 8      |
| 8.027   | Supply 300 mm Valve Assembly   | each           | 3      |
| 8.028   | Supply PRS Precast Concrete 1500 mm dia Sump Drywell Rings come complete with Biaxial Geogrid Wrap, precast bottoms and lids.                                      | each           | 3      |
| 8.029   | Supply 25 to 50 mm Round Washed Stone for PRS Pipe Surround  | m <sup>3</sup> | 1,075  |
| 8.03 Installation of PRS System Piping                            |  |                |        |
| 8.031   | Install Geosynthetic Clay Liner (GCL) for Bottom of PRS-1 Collector between 1+50 and 2+20 on PRS-1   | m <sup>2</sup> | 885    |
| 8.032   | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 oz Geotextile Separation Layer for PRS1, PRS1-A, PRS1-B and PRS-2                                | LM             | 1,194  |
| 8.033   | Install Pre Purchased Groundwater Collector Pipe and Fittings (Perforated 300mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-1, PRS-1A, PRS-1B and PRS-2  | LM             | 427    |
| 8.034   | Install Pre Purchased Groundwater Collector Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-1, PRS-1A, PRS-1B and PRS-2      | LM             | 65     |
| 8.035   | Install Pre Purchased Geosynthetic Clay Liner (GCL) for Bottom of Collector between 0+00 and 1+00 on PRS-3   | m <sup>2</sup> | 1,920  |
| 8.036   | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 Oz Geotextile Separation Layer for PRS-3   | LM             | 329    |
| 8.037   | Install Pre-Purchased Groundwater Collector Pipe and Fittings (Perforated 300mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-3                            | LM             | 137    |
| 8.038   | Install Pre-Purchased Groundwater Collector Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-3                                | LM             | 11     |
| 8.039   | Install PRS and LCS System Drainage Aggregates Between Stations 0+00 and 0+160 on PRS/LCS 3  | LM             | 148    |
| 8.040   | Install Temporary 300 mm HDPE DR 11 Solid Pipe tie-in to DMH0030 on 600 mm HDPE Line   | LM             | 181    |
| 8.041   | Supply and Install 300mm solid HDPE DR 11 Clean-out structure c/w blind flange and SS bolts and Lock Block   | LM             | 5      |
| 8.042   | Install PRS Precast Concrete 1500 mm dia Drywell Sump c/w Biaxial Geogrid Wrap at PRS1, PRS2 and PRS3  | LM             | 3      |
| 8.043   | Install Pre-Purchased Cleanout Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on three PRS1 and PRS2 Cleanout lines                | LM             | 216    |
| 8.044   | Install Temporary 300 mm HDPE DR 11 Solid Pipe tie-in from PR1 Wye to Existing DMH0025 on 450 mm PVC Line  | LM             | 146    |
| 8.045   | Install Temporary 300 mm HDPE DR 11 Solid Pipe connections from PRSS-1 and PRSS-2 to PRS1 Wye and to existing Heal Basin Clean Out                                 | LM             | 110    |
| 9 Cell 4 Liner System Procurement and Installation                |  |                |        |
| 9.01 Procure and Deliver Synthetic Liner System                   |  |                |        |
| 9.011   | Supply White, 60mil thick, Double-textured, HDPE Geomembrane   | m <sup>2</sup> | 29,221 |
| 9.012   | Supply Geosynthetic Clay Liner (GCL) (includes GCL for PRS-1 and PRS-3 Trench Lining)  | m <sup>2</sup> | 32,026 |
| 9.013   | Supply 8 oz Non Woven Geotextile   | m <sup>2</sup> | 58,442 |
| 9.014   | Supply 12 oz Non Woven Geotextile (include 12 oz Geo for PRS and LCS bedding and surround separation)  | m <sup>2</sup> | 40,527 |
| 9.02 Install Synthetic Liner System                               |  |                |        |
| 9.021   | Place and Install pre-purchased Geosynthetic Clay Liner (GCL)  | m <sup>2</sup> | 29,221 |
| 9.022   | Install Pre-Purchased White, 60 mil thick, Double-textured, HDPE Geomembrane   | m <sup>2</sup> | 29,221 |
| 9.023   | Install pre-purchased 12 oz. Non-woven Geotextile - Cushion Layer above Liner  | m <sup>2</sup> | 29,221 |
| 9.024   | Supply and Install Liner Penetration Boots   | each           | 6      |
| 9.025   | Geomembrane Anchor Trench c/w 12 oz Non-woven Wrap Around Liner End, Warning Tape and Minus 12.5 mm Screen Reject Backfill   | LM             | 550    |
| 9.026   | Crush, Screen Minus 12.5 mm Screen Reject for Anchor Trench  | m <sup>3</sup> | 550    |
| 9.027   | Supply and Install Bentonite Cliff Edge Seal   | LS             | 1      |
| 9.03 Install Above Liner Leachate Collection System Aggregates    |  |                |        |
| 9.031   | Crush, Screen, Load, Haul, Place 200mm Thick Minus 12.5mm Screen Reject Upper Cushion  | m <sup>3</sup> | 5,844  |
| 9.032   | Install pre-purchased 8 oz. Non-woven Geotextile Separation Layer  | m <sup>2</sup> | 29,221 |
| 9.033   | Crush, Screen, Load, Haul, Place 500 mm Thick 25-75mm Coarse Drain Rock Leachate Collection Layer  | m <sup>3</sup> | 14,611 |
| 9.034   | Crush, Screen, Load, Haul, Place 200 mm Thick 12.5-25mm Clear Crush Gravel Leachate Filter Layer   | m <sup>3</sup> | 5,844  |
| 9.035   | Crush, Screen Minus 12.5mm Screen Reject for 100 mm Pipe Bedding along all LCS Pipes   | m <sup>3</sup> | 350    |
| 9.036   | Crush, Screen, Load, Haul, Place, 75-150 mm Drain Rock on LCS-1, LCS-1A, LCS-1B, LCS-2 and LCS-3 alignment and LCS sump surround (excludes 500 mm over liner area) | m3             | 1,373  |
| 10 Cell 4 Leachate Collection System Procurement and Installation |  |                |        |
| 10.01 Procure and Deliver Leachate Collection System Piping       |  |                |        |
| 10.011  | Supply 300 mm DR 11 HDPE Solid Pipe for LCS Cleanouts  | LM             | 230    |
| 10.012  | Supply 600 mm DR 11 HDPE Solid Pipe for LCS  | LM             | 390    |
| 10.013  | Supply 600 mm DR 11 HDPE Perforated Pipe for LCS   | LM             | 572    |
| 10.014  | Supply 600 mm Wyes (45)  | each           | 1      |
| 10.015  | Supply 600 mm Tees   | each           | -      |
| 10.016  | Supply 600 mm 22.5 Elbows  | each           | 5      |
| 10.017  | Supply 600 mm 45 Elbows  | each           | 4      |
| 10.018  | Supply Materials for LCS Clean Out Structures including Lock Blocks, Blind Flanges, Sampling Spiggots and Fittings   | each           | 6      |
| 10.019  | Supply 600 mm Valve Assembly   | each           | 1      |
| 10.020  | Supply LCS Precast Concrete 1500 mm dia Sump Drywell Rings come complete with Biaxial Geogrid Wrap, precast bottoms and lids.                                      | each           | 6      |
| 10.021  | Supply 25 to 50 mm Round Washed Stone for LCS Pipe Surround  | m <sup>3</sup> | 1,565  |
| 10.02 Install Leachate Collection System                          |  |                |        |
| 10.021  | Install Pre-Purchased Leachate Collector Pipe and Fittings (Perforated 600mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-3                               | LM             | 138    |
| 10.022  | Install Pre-Purchased Leachate Collector Pipe and Fittings (Solid 600 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-3                                   | LM             | 10     |
| 10.023  | Supply and Install New Manhole LMH0030 (1500 mm Solid Rings with Explosion Proof Lid) on existing 600 mm HDPE Gravity Sewer  | each           | 1      |
| 10.024  | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 Oz Geotextile Separation Layer   | LM             | 962    |
| 10.025  | Install Pre Purchased Leachate Collector Pipe and Fittings (Perforated 600mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-1,LCS-1A, LCS-1B and LCS-2      | LM             | 434    |
| 10.026  | Install Pre Purchased Leachate Collector Pipe and Fittings (Solid 600 mm DR11 HDPE) on LCS-1, LCS-1A, LCRS-1B and LCS-2  | LM             | 52     |
| 10.027  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) between LCS-2 and LCS-1 and Between LCS-3 and LCS-1 (include required trenching)           | LM             | 84     |
| 10.028  | Install LCS Precast Concrete 1500 mm dia Sump-Drywell c/w Biaxial Geogrid Wrap   | each           | 3      |
| 10.029  | Install 600 mm Cleanout Assembly including Lock blocks   | each           | 6      |
| 10.030  | Install pre purchased 300 mm LCS Clean Out Pipes   | LM             | 230    |
| 10.031  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) Berm Penetrations for LCSS-2 and LCSSS-3   | LM             | 69     |
| 10.032  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) from LCSS1 to DMH0030  | LM             | 175    |
| Total Aggregate Production, Soil and Stone Design Quantities      |  |                |        |
| Clay Soil - Owner Supplied  |  | m <sup>3</sup> | 7,749  |
| 25 to 50 mm Clear Round Washed Stone - Contractor Supplied        |  | m <sup>3</sup> | 2,640  |
| Minus 12.5 mm Screen Reject - Aggregate Production                |  | m <sup>3</sup> | 13,794 |
| 12.5 to 25 mm Clear Crush -Aggregate Production                   |  | m <sup>3</sup> | 5,844  |
| 25 to 75 mm Clear Crush - Aggregate Production                    |  | m <sup>3</sup> | 23,377 |
| 75 to 150 mm Clear Crush - Aggregate Production                   |  | m <sup>3</sup> | 13,462 |
| Total DR11 HDPE Pipe Design Lengths                               |  |                |        |
| 300 mm solid  |  | LM             | 959    |
| 300 mm perforated   |  | LM             | 564    |

INVITATION TO TENDER  
AND  
INSTRUCTIONS TO TENDERERS

CAPITAL REGIONAL DISTRICT

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
30.22.06-03

**INVITATION TO TENDER**

Sealed Tenders, plainly marked on the envelope "Tender for Construction Services for Hartland Landfill Cell 4 Liner" will be received by the **Project Manager, Parks & Environmental Services** of the Capital Regional District at their offices at **625 Fisgard Street, Victoria, British Columbia** up to **2:00pm** local time on **October 13, 2023** at which time they will be opened in private.

The works to be constructed under this Contract generally include, but is not limited to, the following:

Procure and install cell 4 liner system for the Harland Landfill. The work covered by these specifications consist of fine grading of the Cell 4 liner system sub grade (including any drilling, blasting and/or hydraulic ramming of existing quarry floor and slopes), groundwater/surface water/leachate dewatering, installation of cell 4 clay berm, crushing onsite shot rock into specified drainage aggregate types and placing/compacting drainage aggregate layers, procuring and installing 29,221 m<sup>2</sup> of HDPE and GCL liner, installation of a ground water HDPE pore pressure relief piping system, installation of a leachate collection HDPE piping system, tying-in temporary ground water and leachate piping to existing landfill piping infrastructure to allow complete functionality of Cell 4 by September 30, 2024, according to the design specifications and design intent.

Proponents may be awarded follow-on work without a competition.

Digital copies may be downloaded for no cost from [www.crd.bc.ca/about/contracts-rfps/](http://www.crd.bc.ca/about/contracts-rfps/) after registering as a vendor and at [www.bcbid.gov.bc.ca](http://www.bcbid.gov.bc.ca) without registration. Vendors are encouraged to check BC Bid regularly for updates and not rely on e-mail notifications, as e-mail is inherently unreliable and subject to interruptions.

The lowest or any tender will not necessarily be accepted.

A **MANDATORY** pre-tender site meeting will be held at the Hartland Landfill Learning Center located at #1 Hartland Avenue, Saanich BC at **11:00am, Tuesday, SEPTEMBER 26, 2023**. Tenders from non-attendees may be rejected by the Owner and returned unopened to the Tenderer. After the meeting, an optional tour of the project area will be given for those interested. CRD staff will escort the Tenderers to the project site. Tenderers will require their own vehicles capable of safely travelling on steep and winding gravel roads. Tenderers must wear steel toe shoes and a high visibility vest/jacket. Tenderers are recommended to visit the site to ensure that they have satisfied themselves of everything and of every condition that could affect the execution of the work. Tenderers are encouraged to make enquiries to satisfy themselves of the work requirements.

For information and/or enquiries on this project please contact Ian Wiebenga, Project Manager, at [PurchasingFMES@crd.bc.ca](mailto:PurchasingFMES@crd.bc.ca) .

CAPITAL REGIONAL DISTRICT

Construction Services for Hartland Landfill Cell 4 Liner  
30.22.06-03

**INSTRUCTIONS TO TENDERERS**

The "Instructions to Tenderers" include the following:

- 1.0 Conditions of Tendering
- 2.0 Bid Security, Bonding, Insurance and Letter of Credit
- 3.0 Submitting the Tender
- 4.0 Acceptance of Tender
- 5.0 Qualifications and Evaluation Criteria
- 6.0 No Claim for Compensation
- 7.0 Pre-tender Site Meeting

1.0 CONDITIONS OF TENDERING

- 1.1 A Tenderer not complying with all the requirements of these "Instructions to Tenderers" RISKS having its Tender rejected.

- 1.2 For the purposes of tendering on this project, the following definitions shall apply.

- 1.2.1 Whenever the word "Owner" appears in these documents, it shall be taken to mean the Capital Regional District.

- 1.2.2 Contract Documents mean:

- a. Instructions to Tenderers;
    - b. Tender Form;
    - c. Agreement Between the Owner and Contractor;
    - d. General Conditions;
    - e. Supplemental General Conditions;
    - f. Specifications;
    - g. Drawings;
    - h. Addenda which may be issued during Tendering period;
    - i. Appendices.

- 1.3 The Tenderer shall be subject to each and every condition, requirement and qualification contained in the Contract Documents and the submission of its tender shall be considered by both the Owner and the Tenderer as conclusive evidence that the Tenderer has carefully read all the Contract Documents, that Tenderer has ascertained the provisions and requirements of all the pertinent laws and regulations (local, provincial and federal) relating to labour; the purchase of materials; the payment of taxes and duties; the payment of freight and ferry charges; the carrying out of the work and the necessity for licenses and permits,

and that Tenderer has thoroughly examined the site and has satisfied itself as to the physical state of the site and all available public services including access to and from the site and the off-loading and storage of materials.

- 1.4 In their tendered price (lawful money of Canada), the Tenderer shall include payment of all applicable sales taxes, licences, building permits, and all or any municipal, provincial or federal charges in connection with the contract, including GST. A GST registration number and amount must be included in the tender form. The Owner will obtain the necessary permissions from the provincial government ministries and from the municipalities to construct the works. All other licences and permits shall be obtained and paid for by the Tenderer.
- 1.5 Tenders are to be subject to all relevant provincial and other legislation.
- 1.6 The Tenderer is deemed to have satisfied itself before submitting its tender as to the correctness and sufficiency of its tender and the failure or neglect of a Tenderer to receive or examine any form, instrument, or other document or to acquaint itself with existing conditions shall in no way relieve Tenderer of its obligations with respect to the tender and to the Contract.
- 1.7 A tender may only be withdrawn prior to the scheduled time for the opening of tenders.
- 1.8 Any alteration or interpretation of the Contract will be made in the form of a written Addendum which may be issued by the Owner at any time up to FIVE (5) WORKING DAYS prior to the tenders being opened.
- 1.9 Tenders must submit any request for information or questions in writing to the point of contact indicated in the Invitation to Tender preamble up to SEVEN (7) WORKING DAYS prior to the tender's close.
- 1.10 Any Addendum issued by the Owner shall be maintained via BC Bid or the CRD Public Website. Tenderers are responsible for ascertaining the existence and contents of any Addendum issued by the Owner.
- 1.11 All Tenderers shall acknowledge receipt and acceptance of each Addendum issued by signing and dating in the spaces provided and submitting the signed Addendum with the Tender. Any Tender submitted without the signed Addenda may be rejected by the Owner as an incomplete Tender.
- 1.12 Tenderers who have obtained tender documents from sources other than the Capital Regional District Public Website or BC Bid, shall register as a vendor on the CRD Public website in order to receive any Addendum issued by the Owner. It is the responsibility of each Tenderer to check the CRD Public Website or BC Bid regularly for any issued Addendum.

- 1.13 Every item in the Schedule of Prices and Estimated Quantities is to be included and if the Tenderer considers that items have been included in any other rates in the Schedule of Prices and Estimated Quantities, "NIL" is to be entered in the cost column.
  - 1.14 Prior to the award of the Contract, the Owner may require the successful Tenderer to break down a lump sum price into separate items as specified by the Owner to facilitate the making of progress payments.
  - 1.15 Within FOURTEEN (14) CALENDAR DAYS after the award of the Contract, the Tenderer shall provide:
    - 1.15.1 a detailed work plan and schedule incorporating all material, equipment, and plans of the work. The work plan and schedule shall be continually updated and submitted to the Owner at the Progress Meetings. Progress Meetings will be held at regular intervals at the time and place stipulated by the Owner; and
    - 1.15.2 a site-specific safety management plan, and any other health and safety requirements requested by the Owner, for approval by the Owner. These materials shall be approved by the Owner, if satisfactory to the Owner, prior to the issuance of the Notice to Proceed. If unsatisfactory, the Contractor shall update the plan and resubmit accordingly.
  - 1.16 The Capital Regional District will not assess the suitability of equipment to meet the Specifications prior to tender opening.
  - 1.17 Local bylaws pertaining to noise, particularly from vehicles travelling to and from the job site will be strictly enforced.
  - 1.18 This Contract, as well as any resultant studies and documents received, are under the control of the Capital Regional District, and as such are subject to the *Freedom of Information and Protection of Privacy Act*. This means that they are subject to requests for access, although items may qualify for non-disclosure under Section 21 of the Act - "...Release harmful to the business interests of a third party", or one or more of the other sections limiting access rights of requesters.
  - 1.19 The terms used in these documents are non-gender specific and refer to both the feminine and the masculine.
  - 1.20 Any discharge of waste into storm sewers or watercourses shall meet all CRD and local laws as it relates to storm sewers and watercourses.
- 2.0 BID SECURITY, BONDING, INSURANCE AND LETTER OF CREDIT
- 2.1 BID SECURITY
    - 2.1.1 Tenders shall be accompanied by a Bid Security in the form of Bid Bond, Letter of Credit, or Tender Deposit issued in the name of the Owner in the amount of not less than TEN PERCENT (10%) of the TOTAL TENDERED AMOUNT. The Bid

Bond shall be in the form provided in this document in the Tender Form, or on an acceptable similar form, and be issued by a Surety Company licensed to conduct business in the Province of British Columbia. The Letter of Credit shall be an irrevocable Commercial Letter of Credit in the form provided in this document in the Tender Form, or an acceptable similar form, and be issued by a Victoria branch of a bank licensed to conduct business in the Province of British Columbia. The Tender Deposit shall be in the form of a certified cheque issued by a Victoria branch of a bank licensed to conduct business in the Province of British Columbia. Alternative forms approved by the Canadian Construction Association may be used provided that the alternative forms do not deviate significantly from the forms included herein.

- 2.1.2 Tenders are irrevocable and no Tenderer shall withdraw a tender for any reason, including error, after the opening of tenders. If a Tenderer withdraws a tender prior to the award of the Contract, or in the event of failure on the part of any Tenderer whose tender has been accepted to perform the obligations set out in the Tender Form, including entering into a contract with the Owner, the Bid Security shall be forfeited and may be retained by the Owner as liquidated damages. If the difference between the amount of the defaulting Tenderer's bid and the price for which the Owner contracts with another Contractor to perform the work is lower than the amount of the Bid Security, then the amount of liquidated damages shall be limited to the amount of the difference. If the difference between the amount of the defaulting Tenderer's bid and the price for which the Owner contracts with another Contractor to perform the work is greater than the amount of the Bid Security, then the Owner may retain or draw down on the full amount of the Bid Security without in any way limiting or waiving any other or further remedy it may have in law or equity against the defaulting Tenderer for damages in excess of the amount of the Bid Security.
- 2.1.3 The Bid Securities submitted by the unsuccessful Tenderers shall lapse as set out below, and except as set out in 2.1.4, Bid Securities shall be returned TEN (10) CALENDAR DAYS after lapsing:
- i) On cancellation, if the bid solicitation is cancelled;
  - ii) As of bid solicitation closing date, for Tenderers whose submissions are materially non-compliant and incapable of acceptance by the Owner under the terms of the Invitation to Tender;
  - iii) As of the completion of the ranking by the Owner, for those bidders submitting compliant or irregular bids which the Owner may accept under the terms of this Invitation to Tender, who are ranked fourth or higher during the bid review by the Owner. If one or more of the bids ranked third to first is withdrawn or rejected for whatever reason, the Owner may reserve the right to hold the bid security of the next highest ranked compliant bid in order to retain security of at least three valid and complaint bids;

- iv) The execution of the Contract, for Tenderers who submit compliant bids or irregular bids which the Owner may accept under the terms of this Invitation to Tender who are ranked third to first by the Owner.

2.1.4 The Bid Security of the successful Tenderer will be returned upon the execution of the Contract Documents and the deposit with the Owner of the Performance Bond, Labour and Materials Payment Bond, WCB Certificate and copies of the Insurance Policies.

2.1.5 In the unlikely event Bid Security is not returned within the time set out in 2.1.3 or 2.1.4, the only legal or equitable remedy available to Tenderers is return of the Bid Security, not damages, interest, court costs, legal fees, or any other financial or other remedy.

## 2.2 PERFORMANCE BOND

Tenders shall be accompanied by the form letter "Undertaking of Surety - Performance Bond" indicating the willingness of the Guarantee Company in question to give such a bond in accordance with Article 34 of the General Conditions.

## 2.3 LABOUR AND MATERIALS PAYMENT BOND

Tenders shall be accompanied by the form letter "Undertaking of Surety - Labour and Materials Payment Bond" indicating the willingness of the Guarantee Company in question to give such a bond in accordance with Article 34 of the General Conditions.

## 2.4 INSURANCE

The Tenderer's attention is drawn to the provisions of General Conditions Article 55 in which the details of the insurance required to be carried by the Contractor are specified.

## 2.5 LETTER OF CREDIT FOR GUARANTEE PERIOD

The Tenderer's attention is drawn to the requirement, outlined in General Conditions Article 30, to provide a standby irrevocable commercial letter of credit to be used if necessary by the Owner to rectify deficiencies during the Guarantee Period.

## 3.0 SUBMITTING THE TENDER

3.1 The signature of the Tenderer shall be in handwriting or, if the Tenderer is a corporation, the Tenderer shall be executed by an individual with authority to bind the corporation or under corporate seal. Any tender not so executed may be rejected.

3.2 Each Tenderer shall submit, as part of its tender, completed lists provided in the Tender Form Annexures regarding information relating to previous contracts, subcontractors, equipment and material suppliers and supervisory personnel.

Tenders shall be signed, sealed and enclosed in a sealed envelope (unless submitted by e-mail in accordance with 3.3) addressed to:

Ian Wiebenga, Project Manager, Parks & Environmental Services  
Capital Regional District  
625 Fisgard Street, PO Box 1000  
Victoria, British Columbia V8W 2S6

and shall be marked:

**CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03**

and show the name of the Tenderer.

If forwarded by mail or courier, the sealed envelope containing the tender must be enclosed within a mailing envelope.

- 3.3 Tenders submitted electronically shall be complete and saved in one PDF file marked with the Tender number and name of Tenderer (other than any electronic bid bond or consent of surety, which must be provided in separate files). Tenders submitted electronically can submit the bid security required under section 2.1 separately by mail or courier, provided that all required documents are received prior to the time set for closing of tenders. Alternatively, tenders submitted electronically can be accompanied by an electronic bid bond and electronic undertakings of surety. The electronic bid bond must meet all the requirements specified in section 2.1, and the Surety Association of Canada's criteria for electronic bonds. Without limiting the foregoing, the electronic bond must meet the following criteria:
- a) The bond must contain digital signatures and digital seals. A scanned copy of a paper bond is not an acceptable electronic bond.
  - b) The version submitted by the Tenderer must be verifiable by the Owner with respect to the totality and wholeness of the bond form (including the content, digital signatures and digital seals) with the Surety Company or an approved verification service provider of the Surety Company;
  - c) The version submitted must be viewable, printable and storable in standard electronic file formats acceptable to the Owner, and in a single file. Allowable formats include pdf.
  - d) Verification may be conducted by the Owner immediately or at any time during the life of the bond and at the discretion of the Owner with no requirement for passwords or fees. The resulting verification must provide a clear, immediate, and printable indication of pass or fail regarding item (b).

Instructions for verification must be included by the Tenderer. Bonds failing the verification process will not be considered valid. The owner reserves the right to contact the Tenderer's Surety Company or Surety Company's service provider directly in order to verify the

electronic bond. The Tenderer and Surety Company should refer to the e-bonding information on the Surety Association of Canada's website, which includes a Checklist of Industry Requirements for E-Bonding Solutions.

- 3.4 Tenders shall be delivered to the above address not later than the time and date stipulated in the "Invitation to Tender" and will be privately opened at that time in the Capital Regional District offices, 625 Fisgard Street, Victoria, British Columbia. Delays caused by COVID-19 (other than CRD office closure) or any issue, including computer related issues, will not be grounds for an extension of the Closing Time. Tenders received after the Closing Time will be returned unopened to the Tenderer. The clock on the computer of the point of contract as indicated in the Invitation to Tender preamble shall be used to time stamp e-mails that are received. It is recommended that the Tenderer contact point of contract to verify that their Tender has been received, but the CRD shall not be liable for any reason should CRD not able to respond prior to the Closing Time. E-mail is inherently unreliable and Tenderers are encouraged to submit well in advance of the Closing Time to ensure receipt by CRD.

If the Capital Regional District offices are closed for any reason or access is blocked by a labour union picket line, the tender opening will be rescheduled. An Addendum will be issued by the Owner confirming the new time and location for the tenders to be received.

- 3.5 Tenders submitted by facsimile communication equipment (FAX) will not be considered nor will modifications submitted by FAX.
- 3.6 Where a Tenderer wishes to amend or alter its submitted Tender prior to closing, without withdrawing and resubmitting its complete Tender, it shall submit any alteration to its prices in the form of additions or deductions to individual line items, unit prices, quantities, or total tendered amount, without showing the total tendered amount. Amendments or alterations shall only be accepted prior to the Tender Closing. Tender alterations which show the total tendered amount (other than in the context of deduction or addition) will be irregular and the Tendering submitting same risks having his tender rejected as non-compliant with these instructions.

#### 4.0 ACCEPTANCE OF TENDER

- 4.1 Tenders not in the office of the Capital Regional District by the time and date stipulated will be returned to the Tenderer unopened.
- 4.2 Any tender which is incomplete, conditional, obscure or contains erasures, alterations, escalator clauses or irregularities of any kind may be rejected by the Owner as an irregular tender.
- 4.3 Any tender which does not include a completed schedule of force account rates and lists of previous contracts, subcontractors, supervisory personnel, equipment, equipment suppliers and major materials suppliers, and WorkSafeBC Occupational Health and Safety

Violations History form, as provided in the Tender Form Annexures, may be rejected by the Owner as an incomplete tender.

- 4.4 Any tender which lists more than one major subcontractor or supplier to provide the same service, equipment or material may be rejected by the Owner as an irregular tender.
- 4.5 Tenders, in consideration of the Owner considering this tender, shall be open for acceptance by the Owner for SIXTY (60) CALENDAR DAYS after the opening of tenders and may not be withdrawn by the Tenderer during that time. The successful Tenderer will be notified in writing by the Owner of the acceptance of Tenderer's tender as expeditiously as possible and no other act shall constitute acceptance of a tender.
- 4.6 The successful Tenderer shall execute a Contract with the Owner within THIRTY (30) CALENDAR DAYS after the date of the written notification of the acceptance of the tender. The form of Contract Agreement shall be as contained herein, with such modifications as are necessary. The Contract Documents shall include any Addenda which may be issued.
- 4.7 Following the opening of tenders, the Owner may in its discretion require any Tenderer to provide evidence that the Tenderer is a business in good standing in the Province of British Columbia and is capable of performing the Contract.

## 5.0 QUALIFICATIONS AND EVALUATION CRITERIA

- 5.1 The Tenderer is required to submit details of previous experience with the type of work proposed and demonstrate proven ability to complete the intended works within the scheduled period of time as specified in the Tender Documents. No award will be made to any Contractor who cannot give satisfactory assurance as to its ability to carry out the works both from Contractor's financial rating, and by reason of previous experience as a Contractor on work of a similar nature to that contemplated in the Contract.
- 5.2 The lowest or any tender will not necessarily be accepted. The Owner reserves the right in its absolute discretion to accept the tender which it deems most advantageous to itself and favourable in its interests and the right to waive informalities in and reject any or all tenders, in each case without giving any notice. In no event will the Owner be responsible for the costs of preparation or submission of a tender.
- 5.3 Tenders which contain qualifying conditions or otherwise fail to conform to these Instructions to Tenderers may be disqualified or rejected. The Owner, however, may at its sole discretion reject or retain for consideration tenders which are non-conforming because they do not contain the content or form required by these Instructions to Tenderers or because they have not complied with the process for submission set out in these Instructions to Tenderers.
- 5.4 Tenderers will be evaluated based on the following criteria:

- 5.4.1 Qualifications and related Landfill Liner construction experience of the Tenderer, and senior personnel and subcontractors to be assigned to this project.
  - 5.4.2 Performance of the Tenderer and subcontractors on similar landfill liner construction projects including, without limitation, the Tenderer's history with respect to quality of work, scheduling, changes in the work and force account work.
  - 5.4.3 The Tenderer's compliance with all statutes, regulations, and bylaws affecting the Tenderer's work. The Tenderer's safety performance obtained from project references and existing/past CRD contracts. The Owner will give particular attention to non-compliance violations of WorkSafeBC Occupational Health and Safety Regulations issued to the Tenderer in the past five (5) years.
  - 5.4.4 Lowest price to the Owner of having the work completed in accordance with the Contract Documents.
  - 5.4.5 The conformity of the tender to the requirements set forth in these Instructions to Tenderers.
  - 5.4.6 Conformance with the timing provided for in the Specifications.
  - 5.4.7 Greatest value based on quality, service and price.
  - 5.4.8 Potential increased costs to the Owner based on a Tenderer's past history of failures, delays, poor quality work, litigation, disputes, threatened disputes, disagreements, poor performance, or disorderly behaviour relating to work for the Owner or on any project known to or discovered by the Owner, as well as for increased cost or expense to the Owner or its agents to supervise the work of the Tenderer to ensure completion of the Work in accordance with the Contract Documents.
- 5.5 The evaluation process will be conducted at the sole discretion of the Owner and, in particular, the price to carry out the work is not the only or primary criterion which will be utilized by the Owner. The Owner reserves the right to make inquiries regarding any or all Tenderers.
- 5.6 The Owner reserves the right, at its discretion, to negotiate with any Tenderer that the Owner believes has the most advantageous tender. In no event will the Owner be required to offer any modified terms to any other Tenderer prior to entering into a contract with the successful Tenderer and the Owner shall incur no liability to any other Tenderer as a result of such negotiations or modifications.
- 5.7 Tenderers are advised that after receipt of tenders and prior to award of Contract, Tenderers may be required to provide the Owner with additional information concerning the Tenderer or its tender including, but not limited to, a further breakdown of relevant components of the Total Tendered Amount.
- 5.8 The Total Tendered Amount used in the evaluation of tenders will be corrected for any arithmetic errors. The unit rates quoted will govern and the extensions will be adjusted if there are any inconsistencies between the two amounts.
- 5.9 The Owner reserves the right to reject any tenders of a Tenderer that is, or whose principals – including affiliates, subsidiaries, officers or directors – are, at the time of tendering, or

have been within a period of five years prior to the tender closing date, engaged either directly or indirectly through another corporation or legal entity in a lawsuit or legal proceeding initiated in any court or tribunal against the Owner in relation to any contract with, or works or services provided to Owner.

- 5.10 The Owner reserves the right to reject any tenders of a company that owes, or whose principals owe, monies to the Owner at the time of tendering.
- 5.11 The Owner reserves the right, in its sole discretion, to reject any tenders of a company or individual in relation to which the CRD has received, from a municipal council represented on the CRD Board, correspondence indicating that the company or individual is not suitable to perform the work of the tender contract because of a poor performance or unprofessional conduct in relation to work similar to that being tendered.

## 6.0 NO CLAIM FOR COMPENSATION

- 6.1 Except as expressly and specifically permitted in these Instructions to Tenderers, no Tenderer shall have any claim for any compensation of any kind whatsoever, as a result of participating in the Tender, and by submitting a bid each Tenderer shall be deemed to have agreed that it has no claim.

## 7.0 PRE-TENDER SITE MEETING

- 7.1 A **mandatory** pre-tender site meeting for general contractors will be held on **September 26, 2023** at the Hartland Landfill Learning Centre at 11:00 am at #1 Hartland Avenue, Saanich BC. Tenders from non-attendees may be rejected by the Owner and returned unopened to the Tenderer.
- 7.2 The purpose of the site meeting is for a general review of the existing site and proposed work and to respond to questions from Tenderers.
- 7.3 The site meeting is provided by the Owner for the general convenience of Tenderers and is not intended to be a thorough examination of all existing site and soil conditions. Attendance to the site meeting in no way limits the responsibility of the Tenderers to make their own independent determination of site conditions and any and all other pertinent factors in preparation of this Tender.

Dear Chair and Members of the Board:

The undersigned Tenderer, having carefully read and examined the Instructions to Tenderers, Tender Form and Annexures, Contract Agreement, General Conditions, Supplemental General Conditions, Specifications, Appendices, Drawings, and Addenda hereby agrees to the same, and having carefully examined the locality and the site of the work and having full knowledge of the work required and of the materials to be furnished and used does hereby tender and offer to enter into a Contract to perform and complete the whole of the said works and provide all necessary labour, plant, tools and materials as set forth and in strict accordance with the Specifications, Drawings and other Contract Documents, and to do all therein called for on the terms and conditions and under the provisions therein at the prices which Tenderer has entered in the Schedule of Prices and Estimated Quantities at which prices the cost of the works set out therein would amount to a

TOTAL TENDERED AMOUNT of \$ 10,867,860.40 (including GST) (lawful money of Canada)

The undersigned Tenderer agrees to complete the whole of the works **no later than September 30, 2024.**

The starting date for the commencement of work shall be FOURTEEN (14) CALENDAR DAYS after the date stated in the "Notice to Proceed" letter signed by the General Manager.

The undersigned Tenderer hereby agrees to pay the sum of \$2000.00 as liquidated damages to the Capital Regional District for each and every CALENDAR DAY that the Contractor exceeds the number of CALENDAR DAYS stipulated upon the Tender Form complete the whole of the works for this Contract.

The undersigned Tenderer hereby agrees that the said Schedule of Prices and Estimated Quantities and Total Tendered Amount include and cover all applicable duties, taxes and handling charges incidental to and forming part of this Contract.

The undersigned Tenderer hereby agrees to submit to the Owner certified copies of all LIABILITY INSURANCE and PROPERTY INSURANCE policies and certificates required and specified in the General Conditions of the Contract forming part of the Contract, all within a period of FOURTEEN (14) CALENDAR DAYS after the date of the written notification of the acceptance of the tender and prior to the commencement of work or supply of materials.

The undersigned Tenderer acknowledges that the Owner shall have the right to reject any or all tenders for any reason or to accept any tender which the Owner in its sole unrestricted discretion deems most

**SCHEDULE OF PRICES AND ESTIMATED QUANTITIES**

For the purpose of comparison of tenders and for subsequent payment, the Tenderer shall break down the Total Tendered Amount into the following items of work. The cost of work not specifically mentioned in this Schedule but included in the Drawings and/or Specifications, either directly or by implication, are to be included in the item to which it is most applicable. The Tenderer shall refer to the Specifications and Drawings for a description of the work to be involved in each item. The CRD has provided a worksheet of design quantities to assist Contractors in formulating their lump sum bids and unit rate costs. This worksheet can be found in Appendix E.

The Tendered Price will represent the entire cost excluding GST to the Owner of the complete Work based on the estimated quantities in the Schedule of Quantities and Prices of the Form of Tender. Notwithstanding the generalities of the above, tenderers shall include in the tendered prices (including unit prices, lump sum prices, or other forms of pricing) sufficient amounts to cover:

- a) The cost of all labour, equipment and material included in or required for the Work, including all items which, while not specifically listed in the Schedule of Quantities and Prices, are included in the Work specifically or by necessary inference from the Contract Documents;
- b) All assessments payable with respect to labour as required by any statutory scheme such as unemployment insurance, holiday pay, insurance, CP and all employee benefits and the Workers Compensation Act;
- c) All overhead costs, including head office and on-site overhead costs, and all amounts for the Contractor's profit

The tendered prices and all subcontracts must allow for compliance with all applicable laws regarding trade or other qualifications of employees performing the Work, and payment of appropriate wages for labour included in or required for the Work.

CONTRACT 30.22.06-03

**PROVISIONAL ITEMS**

(not included in Tender Price)

This section forms part of the Contract Documents and is to be read, interpreted and coordinated with all other parts.

Provisional items quoted on will be reviewed and accepted or rejected at the Owner's option. Accepted provisional item prices will be identified in the construction agreement.

Final payment to the Contractor will be made for the actual quantities, only of work performed or materials furnished, in accordance with the plans and specifications as determined by measurements made by the CRD. It is agreed that the quantities of work to be done or materials to be furnished may be reduced and/or altered by the CRD and such alterations shall not be considered as a waiver of any condition of the Contract, or as invalidating any of the provision thereof, nor shall any changes be made in the Contract unit prices on account of such alterations, but the same unit prices shall apply as if no alteration had been made.

Coordinate related work and modify surrounding work to integrate the Work of each provisional item.

Prices quoted should not include GST.

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**TENDER ANNEXURES**

The Tender Form Annexures form part of the tender and comprise:

1. Bid Bond
2. Letter of Credit for Bid Security
3. Undertaking of Surety – Performance Bond
4. Undertaking of Surety – Labour and Materials Payment Bond
5. Schedule of Force Account Rates
6. Company Profile
7. List of Previous Contracts
8. WorkSafeBC Non-compliance Violations History
9. List of Proposed Subcontractors
10. List of Supervisory Personnel
11. List of Equipment
12. List of Proposed Equipment Suppliers
13. List of Proposed Major Materials Suppliers

The form of Bid Bond (if the Tenderer submits a Surety Bond in lieu of a Letter of Credit or Tender Deposit), Performance Bond, and Labour and Materials Payment Bond, shall be completed in accordance with the requirements specified in the Contract Documents on the forms provided herein, or on acceptable similar forms, and shall be attached to the tender.

Completion of the above annexures is mandatory.

CAPITAL REGIONAL DISTRICT

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**BID BOND**

KNOW ALL PERSONS BY THESE PRESENTS THAT

\_\_\_\_\_ as Contractor,  
(hereinafter called the Contractor), and

\_\_\_\_\_ as Surety,  
(hereinafter called the Surety),

are jointly and severally held and firmly bound unto

**The Capital Regional District** as Owner, (hereinafter called the Owner), in the penal sum of TEN PER CENT (10%) of the TOTAL TENDERED AMOUNT of lawful money of Canada, for the payment whereof unto the Owner, the Contractor and Surety jointly and severally bind themselves forever firmly by these presents.

WHEREAS, the Contractor is herewith submitting its offer for the fulfilment of:

**CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03**

NOW THEREFORE, the condition of this obligation is such that if, before the expiration of SIXTY (60) CALENDAR DAYS from the opening of tenders for the said Contract, the Contractor is awarded the said Contract and if the Contractor within the time specified in the tender for such Contract enters into, executes and delivers to the Owner an agreement in the relative form annexed and if the Contractor and Surety within the time specified in the said tender give a good and sufficient Performance Bond in the relative form annexed for FIFTY PERCENT (50%) of the TOTAL TENDERED AMOUNT to secure the performance of the terms and conditions of the said Contract, and a Labour and Materials Payment Bond in the relative form annexed for FIFTY PERCENT (50%) of the TOTAL TENDERED AMOUNT, then this obligation shall be void; otherwise the Contractor and Surety will pay unto the Owner the difference in money between the amount of tender of the Contractor and the amount for which the Owner legally contracts with another party to perform the work if the latter amount be in excess of the former, but in no event shall the Surety's liability exceed the penal sum hereof.

AND IT IS HEREBY DECLARED AND AGREED that the Surety shall be liable under this obligation as fully as if it were the Contractor, and that nothing of any kind or nature whatsoever that will not discharge the Contractor shall operate as a discharge or a release of liability to the Surety, any law, rule of equity or usage relating to the liability of sureties to the contrary notwithstanding.

**See Bid Bond in  
Separate Attachment**

AND IT IS HEREBY DECLARED AND AGREED that this obligation shall be binding upon and inure to the benefit of the Contractor, the Surety and the Owner and upon and to their respective heirs, executors, administrators, successors and assigns, and every of them as if the words "heirs, executors, administrators, successors and assigns" had been inscribed in all necessary places.

Dated this \_\_\_\_ day of \_\_\_\_\_, 20 \_\_\_\_.

**LIBERTY MUTUAL INSURANCE COMPANY**

181 Bay Street, Suite 900, Brookfield Place,  
Toronto, Ontario M5J 2T3

**BID BOND**

Standard Construction Document  
CCDC 220 - 2002

Bond No. **BDTO-920008-023-074**

Bond Amount **\$10% of tender**

**BD Hall Constructors Corp.** as Principal, hereinafter called the Principal, and **Liberty Mutual Insurance Company** a corporation created and existing under the laws of Massachusetts and duly authorized to transact the business of Suretyship in Canada as Surety, hereinafter called the Surety, are held and firmly bound unto **Capital Regional District** as Obligee, hereinafter called the Obligee, in the amount of ten percent of tender Dollars (\$10% of tender) lawful money of Canada, for the payment of which sum the Principal and the Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally.

WHEREAS, the Principal has submitted a written bid to the Obligee, dated the **13th** day of **October** in the year **2023** for

**Construction Services for Hartland Landfill Cell 4 Liner, Contract 30.22.06-03**

The condition of this obligation is such that if the Principal shall have the bid accepted within the time period prescribed in the Obligee's bid documents, or, if no time period is specified in the Obligee's bid documents, within **sixty (60)** days from the closing date as specified in the Obligee's bid documents, and the Principal enters into a formal contract and gives the specified security, then this obligation shall be void; otherwise, provided the Obligee takes all reasonable steps to mitigate the amount of such excess costs, the Principal and the Surety will pay to the Obligee the difference in money between the amount of the bid of the Principal and the amount for which the Obligee legally contracts with another party to perform the work if the latter amount be in excess of the former.

The Principal and Surety shall not be liable for a greater sum than the Bond Amount.

It is a condition of this bond that any suit or action must be commenced within seven (7) months of the date of this Bond.

No right of action shall accrue hereunder to or for the use of any person or corporation other than the Obligee named herein, or the heirs, executors, administrators or successors of the Obligee.

**IN WITNESS WHEREOF**, the Principal and the Surety have Signed and Sealed this Bond dated October 4, 2023.

CONTRACT 30.22.06-03

**SCHEDULE OF FORCE ACCOUNT RATES**

The following personnel and equipment rates will form the basis of payment for force account work carried out in accordance with Article 43 of the General Conditions. The Tenderer should list all anticipated occupations and equipment, including those to be employed on subcontracted work. Notwithstanding the rates entered by the Tenderer, the maximum rates that will be considered for force account work under Article 43 of the General Conditions shall not exceed the local labour and equipment rates as published by the Vancouver Island Construction Association or the latest edition of the Equipment Rental Guide authorized by the BC Government, commonly known as the "Blue Book", whichever is lesser. Force account rates shall be inclusive of all fuel, fuel escalation, labor premium time (for work occurring during normal business hours 7am to 5pm Mon-Fri, 7am – 2pm Sat) maintenance and materials required to operate the equipment. The personnel and force account rates provided by the Tenderer shall be valid for the duration of this Contract, including mobilization, construction, and demobilization.

| Mobilization of crew off of site                                    | 3500.00           |
| Mobilization of crew onto site                                      | 3500.00           |

\* Travel time and room & board, are extra if applicable.

\* All rates have a four (4) hour minimum.

\* All disposal fees will be charged pending location.

\* Prices do not include GST.

\* Materials will be priced at cost plus 15%.

\* Equipment mobilizations for less than three (3) days work will be charged in and out.

\* Equipment mobilizations for over three (3) days work will be charged in only.

\* Mobilization cost may vary based on size of machine and distance

\* Nightshift premium will be charged out at the Time & Half rates

\*Should the local market/rack diesel fuel rate exceed \$2.20/litre, a fuel surcharge will be calculated as per the example below:

A diesel fuel surcharge will be applied to the equipment hourly rate based on the calculation of 1.50% per every \$0.10 increase from the rate of \$2.20/litre. Example : Rate of \$2.20 - \$2.45 = (\$0.25 / \$0.10) x 1.50% = 3.75% fuel surcharge.

**NOTE: A 5% Rate Increase will be applied from January 2024 - January 2025**

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**COMPANY PROFILE**

The Tenderer shall include a company profile outlining the company's ownership, field of expertise, current number of employees, locations/business units, number and type of equipment owned, annual revenue etc.

[See Company Profile on the following page.](#)

## Hall Constructors Company Profile

### **Construction Services for Hartland Landfill Cell 4 Liner Contract 30.22.06-03**

Owned by Bryan Hall and Chad Tenney, Hall Constructors evolved out of planned succession and a need to diversify in an ever-expanding market. We have been driven by some of the most prominent and complex projects in our industry, continually expanding our areas of expertise, sighting new challenges and niche markets.

A locally owned and operated group of companies based in Langley, BC, Hall Constructors brings 13 years of experience in the construction industry across British Columbia, including Vancouver Island. The group of companies includes Hall Constructors, Hall Excavation & Shoring, Hall Shoring & Foundations, Hall Mechanical Services, Vancouver Sand & Gravel, FLL Distributors, and All Roads. Our group has over 70 project managers/ estimators/ coordinators, 20 field supervisors and 40 foremen supported by over 150 field personnel, 50 administrative/support staff and approximately 200 pieces of heavy construction equipment. The group of companies will have combined annual revenues in excess of \$200 million in 2023.

We have successfully completed numerous civil infrastructure projects in the Lower Mainland and on Vancouver Island, including landfill operations and utilities, excavation, blasting, site preparation, large-scale roadworks, underground utilities, and other major civil construction works of varying size, scope, and complexity.

To demonstrate our experience, we have included five relevant projects within this submission in the following pages of this tender form. These projects collectively involve installation of landfill liner geosynthetics and gravel, capping materials, HDPE utilities, and blasting/crushing operations. On some of these projects we have worked specifically with Sperling Hansen Associates.

We have become very well known with many governing bodies for our award-winning work with Ministry of Transportation and Infrastructure, Ministry of Environment, Agricultural Land Reserve and many local municipalities. For more information, see our website at [www.bdhall.ca](http://www.bdhall.ca) for a more complete and extensive resume of the services Hall is able to provide.

Sincerely,

Ian Lacoursiere  
Regional Director, Vancouver Island

CAPITAL REGIONAL DISTRICT

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**LIST OF PREVIOUS CONTRACTS**

The Tenderer shall fill in details below a of a minimum of three (3) recent contracts (within the past 10 years) undertaken with Landfill liner work of a nature similar to this proposed Contract. It is the intention of the Capital Regional District to use the information given below to assess the experience of the Tenderer in the appropriate fields of work. The Owner may contact the references given below before awarding the Contract. Tenderers are encouraged to provide additional information including description, pictures and project details for each reference project to support their experience. Tenderers should clearly define which entity's experience (Tenderer or Subcontractor Partner) is being referenced for each reference project. If a Subcontract Partner's experience is used as one or more of the project references, then the Tenderer shall ensure they include a minimum of three recent projects references that were completed by the Tenderer of a similar nature to this contract.

## **Related Projects**

### **Construction Services for Hartland Landfill Cell 4 Liner Contract 30.22.06-03**

#### **Project Title – Pacific Hill Offsite Civil (2023 Ongoing)**

Location – Langford BC

Contract Value – \$14,385,000

Client – Beedie

Consultant – McElhanney Ltd

Contact – Leo Huang (leo.huang@beedie.ca)

Phone Number – 604-909-8739

Description of Work – The project comprised of earthworks, blasting and crushing for future roads/utilities including:

- Stripping to stockpile – 75,000 m3
- Loading/Offsite Haul of Topsoil – 60,000 m3
- Bulk Grade Fill – 65,000 m3
- Offsite Hauling to Nearby Project – 40,000 m3
- Blasting – 160,000 m3
- Crushing – 115,000 m3

#### **Project Title – Vancouver Landfill LFG & Leachate System Upgrades (2022)**

Location – Delta BC

Contract Value – \$6,680,000

Client – City of Vancouver

Consultant – R.F. Binnie and Associates / Sperling Hansen and Associates

Contact – Rod Zedan

Phone Number – 604-606-2741

Description of Work – The project comprised of replacement of the South gas header pipe, installation of leachate collectors and number of vertical gas wells. Scope included:

- Approximately 1,100 metres of trenching in imported soil mixed with construction demolition debris to install the new gas conveyance header pipe
- Handling, loading, hauling, and disposing of material excavated from trench construction.
- Removing and disposing of the existing gas conveyance header pipe.
- Installation of 1,100 metres of 600 mm dia. HDPE gas pipe.
- Installation of 1,130 metres of 100 mm dia. HDPE air supply pipe.
- Installation of 1,100 metres of 100 mm dia. PVC conduit.
- Additional embankment (fill) as necessary for surface slope requirements.
- Installation of 640 metres of 100 mm dia. HDPE condensate drain pipe.
- Installation of condensate drain traps
- Installation of 390 metres of 200 mm dia. HDPE Catch Basin Leads

- Expose and connect to the existing leachate collectors
- Installation of approximate 300 meters of 250 mm dia. HDPE perforated leachate collection pipe and gravel bedding
- Installation of 300 mm dia. HDPE solid pipe settlement sleeves
- Installation of 3 gas sample ports, including connections to existing or new leachate collectors, HDPE pipe work, trenching and backfilling
- Install 9 new vertical gas wells
- Approximately 213 metres of drilling and completing vertical gas wells on the existing final cover system

**Project Title – Vancouver Landfill Phase 4 North Leachate, Gasworks and Legacy Lake Pipe (2021)**

Location – Delta BC

Contract Value – \$1,890,000

Client – City of Vancouver

Consultant – Sperling Hansen and Associates

Contact – Jerry Sobejko (jerry.sobejko@vancouver.ca)

Phone Number – 604-940-3203

Description of Work – The project comprised of leachate and gas collections pipes, as well as stormwater pipe including:

- 460 m of 600mm HDPE DR 17 pipe and repairs.
- 290 m of 300mm HDPE DR 17 perforated pipe supplied by the owner for leachate collection.
- 1,010 m of 150mm HDPE SDR 11 perforated gas pipe.
- 250 m of 150mm HDPE SDR 11 solid gas pipe.
- 130 m of 150mm HDPE SDR 17 gas pipe.

**Project Title – Vancouver Landfill Phase 3 South-East Closure/Gas System Upgrades (2017)**

Location – Delta BC

Contract Value – \$7,920,000

Client – City of Vancouver

Consultant – R.F. Binnie and Associates

Contact – Jerry Sobejko (jerry.sobejko@vancouver.ca)

Phone Number – 604-940-3203

Description of Work – The project comprised of closure of the Phase 3 SE area including earthworks, geomembrane installation, leachate management upgrades, surface water management upgrades, landfill gas management upgrades, and infrastructure upgrades including:

Scope included:

- 28,000 m<sup>3</sup> of capping material (Phase 3 SE).
- 96,370 m<sup>2</sup> of geomembrane installation (Phase 3 SE).
- 500 m of 100mm HDPE leachate forcemain (Phase 3 SE).
- 1,875 m of 150mm to 450mm HDPE LFG pipe (Phase 3 SE).

- Additional works in Phase 3 NE area: 644 m of perforated horizontal collector, 550 m of solid horizontal collector, 782 m of 150 mm to 250mm HDPE LFG pipe.

**Project Title – Vancouver Landfill Phase 3 West Closure/Gas System Upgrades (2014)**

Location – Delta BC

Contract Value – \$10,860,000

Client – City of Vancouver

Consultant – R.F. Binnie and Associates

Contact – Lynn Belanger (lynn.belanger@vancouver.ca)

Phone Number – 604-940-3201

Description of Work – The project comprised of closure of the Phase 3 West area including gas system upgrades, gas collection wells and piping, leachate piping, site grading and roadworks including:

- Grading of a storm water retention pond and berm.
- Surface water management – 605 m of 600mm HDPE DR17, 355 m of 600mm HDPE Dr32.5, 142 m of 600mm HDPE DR17 culvert.
- Leachate Collection: 342 m of 250mm slotted HDPE DR 17, 134 m of 300mm solid HDPE DR 17, 491 m of 450mm HDPE DR 11.
- LFG System Upgrades: 290 m of above ground 150mm HDPE, 2,030 m of below ground 150mm HDPE, 2,030m of 50mm HDPE

**Furthermore, at the end of our quote, please see proof of the following from our liner installation subtrade:**

- Proof of Certification by the International Association of Geosynthetic Installers (IAGI) Welder Certification Program
- Proof of experience in installation of over 50 HA of GCL
- Proof of experience in installation of over 100 HA of Geotextiles
- Proof of experience in installation of over 100 HA of HDPE Geomembrane

|                     |                      |                     |                           |  |                       |
|                     |                      |                     |                           |  |                       |
|                     |                      |                     |                           |  |                       |

(If additional space is required use reverse side of this page.)

## List of Supervisory Personnel

### **Construction Services for Hartland Landfill Cell 4 Liner Contract 30.22.06-03**

#### **Ian Lacoursiere**

*Regional Director, Vancouver Island*

Mr. Lacoursiere is an experienced Manager with over 25 years of experience in road and infrastructure construction in the lower mainland and Vancouver Island. Ian has been engaged extensively in estimation, negotiation and contract signing, invoicing, communication with the project owner and other stakeholders, work scheduling, procurement and hiring subcontractors, site supervision, and equipment procurement. Ian is currently involved in all of Hall's projects on Vancouver Island and is familiar with local markets. Current relevant projects with Ian's involvement include the Pacific Hill project which requires over 150,000 m3 of blasting works and over 110,000 m3 of crushing works.

#### **Mike Clapperton**

*Construction Manager, Vancouver Island*

Mr. Clapperton has over 25 years of experience in the construction industry. He has held a variety of roles such as a Construction Manager, Superintendent, Foreman, Operator, Graderman and Pipelayer. As Construction Manager, Mike is involved in all of Hall's projects on Vancouver Island. Other relevant projects in his portfolio include numerous projects at the Vancouver Landfill where Hall was responsible for installation of HDPE piping, geosynthetic liners, and placement of capping materials totalling over \$30,000,000 in value. Mike is also involved in the Pacific Hill project noted above. As Construction Manager, Mike will report directly to the Project Manager and be responsible for daily scheduling, coordination of work, and construction methodologies planning. He will ensure the planned work is consistent with the project schedule and work closely with the Project Manager to revise the work plan as needed and ensure that critical project deadlines are met. Mike will be directly responsible for the on-site workforce related to scheduling, budget, safety, and quality.

#### **Andrew Furness**

*Project Manager*

Mr. Fourness is a Project Manager possessing an educational foundation in civil engineering and 9 years of experience in the construction industry. He has a proven track record in planning, managing, and successfully delivering various sizes of civil projects, while ensuring the timely completion and adherence to budgets. Andrew is also involved in the Pacific Hill project noted above. Furthermore, Andrew's expertise, communication, and interpersonal skills have facilitated effective collaborations, resulting in the establishment of long-term and mutually beneficial partnerships. As Project Manager, Andrew will be responsible for the overall construction planning, engineering, procurement, and contract administration for the Project.

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

The Contractor shall list below proposed suppliers of major materials to be incorporated into the works of this Contract.

[illegible]

INTERNATIONAL ASSOCIATION OF GEOSYNTHETIC INSTALLERS

**Certificate of Membership**

This Certifies That

*Western Tank & Lining Ltd.*

Is a member in good standing of the International Association of Geosynthetics Installers  
dedicated to the advancement of the geosynthetics installers industry.

Valid through December 31, 2023

Andrew Sanderson  
President, IAGI

Laurie Honnigford  
Managing Director, IAGI

# Recent Landfill Expansion Project History

# Wabasca Landfill Cell 8 Expansion

**Location:** Wabasca, AB

**Owner:** CNRL

**General Contractor:** BTO Contracting

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 28,400 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 28,400 m<sup>2</sup>

# Secure South Wapiti Landfill Cell 6 Expansion

## Forceman Ridge Phase 1B Landfill Expansion

**Location:** Kitimat, BC

**Owner:** Regional District of Kitimat-Stikine

**General Contractor:** IDL Projects Inc.

**Application:** Municipal Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **9,900 m<sup>2</sup>**

Material: **60 HDPE Smooth**

Quantity: **8,300 m<sup>2</sup>**

Material: **GCL**

Quantity: **19,300 m<sup>2</sup>**

Material: **Geotextile**

Quantity: **18,200 m<sup>2</sup>**

## Silverberry Landfill Cell 9 Expansion

**Location:** Fort St. John, BC

**Owner:** Secure

**General Contractor:** BTO Contracting

**Application:** Industrial Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **40,000 m<sup>2</sup>**

Material: **High Flow Geocomposite**

Quantity: **40,000 m<sup>2</sup>**

Material: **Low Flow Geocomposite**

Quantity: **40,000 m<sup>2</sup>**

## Comox Cell 2 Landfill Expansion

**Location:** Cumberland, BC

**Owner:** Comox-Strathcona Waste Management

**General Contractor:** Hazelwood Construction

**Application:** Municipal Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **51,200 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **11,700 m<sup>2</sup>**

Material: **GCL**

Quantity: **46,100 m<sup>2</sup>**

Material: **Geotextile**

Quantity: **34,400 m<sup>2</sup>**

## Secure Zama Cell 10

**Location:** Zama City, AB

**Owner:** Secure

**General Contractor:** Secure

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 1,500 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 2,500 m<sup>2</sup>

**Material:** GCL

**Quantity:** 1,500 m<sup>2</sup>

## Jackfish Cell 4 Landfill Expansion

**Location:** Conklin, AB

**Owner:** CNRL

**General Contractor:** BTO Contracting

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 6,200 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 6,200 m<sup>2</sup>

**Material:** GCL

**Quantity:** 6,200 m<sup>2</sup>

## Secure Pembina Cell 9 Expansion

**Location:** Cynthia, AB

**Owner:** Secure

**General Contractor:** Pidherney's Inc.

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 26,500 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 26,500 m<sup>2</sup>

**Material:** GCL

**Quantity:** 1,000 m<sup>2</sup>

## Willesden Green North Cell 6 Landfill Expansion

**Location:** Rocky Mountain House, AB

**Owner:** Secure

**General Contractor:** Pidherney's Inc.

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 37,900 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 38,400 m<sup>2</sup>

**Material:** GCL

**Quantity:** 1,500 m<sup>2</sup>

## Spyhill Cell 6

**Location:** Calgary, AB

**Owner:** City of Calgary

**General Contractor:** BTO Contracting

**Application:** Municipal Waste

**Material:** 80 HDPE Double-sided Textured

**Quantity:** 50,800 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 13,700 m<sup>2</sup>

**Material:** GCL

**Quantity:** 4,200 m<sup>2</sup>

**Material:** Geotextile

**Quantity:** 40,800 m<sup>2</sup>

## South Wapiti Cell 5 Landfill Expansion

**Location:** Grande Prairie, AB

**Owner:** Secure

**General Contractor:** BTO

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 37,700 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 38,100 m<sup>2</sup>

## Prince Rupert Phase 2N

**Location:** Prince Rupert, BC

**General Contractor:** CTNCA

**Owner:** City of Prince Rupert

**Application:** Municipal Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 24,800 m<sup>2</sup>

**Material:** GCL

**Quantity:** 24,800 m<sup>2</sup>

## CNRL PeeJay Cell 1

**Location:** Fort St. John, BC

**Owner:** CNRL

**General Contractor:** BTO Contracting

**Application:** Municipal Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **9,500 m<sup>2</sup>**

Material: **GCL**

Quantity: **2,400 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **12,725 m<sup>2</sup>**

## Prince Albert Cell 1B, Cell 1A and Cell2A

**Location:** Prince Albert, SK

**Owner:** City of Prince Albert

**General Contractor:** Secure Energy

**Application:** Municipal Waste

Material: **60 HDPE White Double-sided Textured**

Quantity: **50,460 m<sup>2</sup>**

Material: **60 LLDPE Black Double-sided Textured**

Quantity: **3,829 m<sup>2</sup>**

Material: **GCL**

Quantity: **50,460 m<sup>2</sup>**

## Coronation Cell 12B

**Location:** Coronation, AB

**General Contractor:** Howitt

**Owner:** Waste Connections of Canada

**Application:** Municipal Waste

**Material:** 60 HDPE White Double-sided Textured

**Quantity:** 35,800 m<sup>2</sup>

**Material:** DRAINTUBE Geocomposite

**Quantity:** 35,800 m<sup>2</sup>

## Onion Lake Cell 1 & Cell 2

**Location:** Onion Lake, SK

**Owner:** DLCN

**General Contractor:** BTO Contracting

**Application:** Municipal Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 32,500 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 32,500 m<sup>2</sup>

## Western Regional Cell 1B

**Location:** Kindersley, SK

**Owner:** Western Regional Landfill Inc.

**General Contractor:** Willows

**Application:** Municipal Waste

Material: **60 HDPE Textured**

Quantity: **9,800 m<sup>2</sup>**

Material: **GCL**

Quantity: **9,800 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **2,700 m<sup>2</sup>**

## CNRL Wabasca Cell 6

**Location:** Wabasca, AB

**Owner:** CNRL

**General Contractor:** BTO Contracting

**Application:** Industrial Waste

**Material:** 60 HDPE Textured

**Quantity:** 10,800 m<sup>2</sup>

**Material:** DRAINTUBE Geocomposite

**Quantity:** 10,800 m<sup>2</sup>

## Tervita Fox Creek Cell 10

**Location:** Fox Creek, AB

**General Contractor:** Nuport

**Owner:** Tervita Corporation

**Application:** Industrial Waste

Material: **60 HDPE Textured**

Quantity: **21,040 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **19,290 m<sup>2</sup>**

## Secure Fox Creek Cell 5

**Location:** Fox Creek, AB

**Owner:** Secure

**General Contractor:** Willows

**Application:** Industrial Waste

**Material:** 60 HDPE Textured

**Quantity:** 9,600 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 9,700 m<sup>2</sup>

## Bigstone Cree Nation Landfill Construction

**Location:** Wabasca, AB

**General Contractor:** BTO Contracting

**Owner:** Bigstone Cree Nation

**Application:** Municipal Waste

Material: **60 HDPE Textured**

Quantity: **5,600 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **5,600 m<sup>2</sup>**

## Alpac Cell 3B

**Location:** Boyle, AB

**General Contractor:** BTD Contracting

**Owner:** City of Red Deer

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 44,000 m<sup>2</sup>

**Material:** Drintube Geocomposite

**Quantity:** 44,000 m<sup>2</sup>

## Kelowna Glenmore Area 2

**Location:** Kamloops, BC

**Owner:** City of Kelowna

**General Contractor:** Acres Enterprises

**Application:** Municipal Waste

**Material:** 60 HDPE Textured

**Quantity:** 23,500 m<sup>2</sup>

**Material:** GCL

**Quantity:** 23,500 m<sup>2</sup>

**Material:** Geotextile

**Quantity:** 23,500 m<sup>2</sup>

## South Wapiti Cell 4

**Location:** Grande Prairie, AB

**General Contractor:** Nuport

**Owner:** Tervita Corporation

**Application:** Industrial Waste

Material: **60 HDPE Textured**

Quantity: **24,330 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **24,330 m<sup>2</sup>**

## Gibraltar Mines Landfill Phase 3B Expansion

**Location:** Cache Creek, BC

**Owner:** Taseko Mines Ltd.

**General Contractor:** Pettersen Contracting

**Application:** Mine Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **9,000 m<sup>2</sup>**

Material: **Geotextile**

Quantity: **9,000 m<sup>2</sup>**

## La Glace Landfill Expansion – Cell 7

**Location:** Grande Prairie, AB

**General Contractor:** Nuport

**Owner:** Tervita Corporation

**Application:** Industrial Waste

Material: **60 HDPE Double-sided Textured**

Quantity: **15,800 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **15,500 m<sup>2</sup>**

Material: **Geotextile**

Quantity: **1,300 m<sup>2</sup>**

## Cache Creek Stage 1A

**Location:** Cache Creek, BC

**Owner:** TNRD

**General Contractor:** Belcorp Environmental Service Inc.

**Application:** Municipal Waste

Material: **60 HDPE Textured**

Quantity: **44,300 m<sup>2</sup>**

Material: **Geocomposite**

Quantity: **21,600 m<sup>2</sup>**

Material: **GCL**

Quantity: **86,300 m<sup>2</sup>**

Material: **80 HDPE Textured**

Quantity: **43,500 m<sup>2</sup>**

## Cariboo Pulp and Paper Cell 1

**Location:** Quesnel, BC

**Owner:** Cariboo Pulp and Paper Company

**General Contractor:** Cariboo Pulp and Paper Company

**Application:** Industrial Waste

**Material:** 60 HDPE Textured

**Quantity:** 19,600 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 19,600 m<sup>2</sup>

## Willesden Green Landfill Expansion – Cell 5

**Location:** Willesden Green, AB

**Owner:** Secure

**General Contractor:** Secure

**Application:** Industrial Waste

**Material:** 60 HDPE Double-sided Textured

**Quantity:** 24,600 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 24,800 m<sup>2</sup>

## Tervita Silverberry Landfill Expansion Cell 8

**Location:** Buick, BC

**General Contractor:** NLR/AE

**Owner:** Tervita Corporation

**Application:** Industrial Waste

**Material:** 60 HDPE Textured

**Quantity:** 27,300 m<sup>2</sup>

**Material:** Geocomposite

**Quantity:** 53,900 m<sup>2</sup>

# Fred Davidson

## Summary

- Supervisor at Western Tank and Lining Ltd. Since March 2019.
- 25 years of geosynthetics installation experience.
- Experience with Geosynthetics Installations at Landfills, Water and Waste Water Treatment Facilities, Earth and Concrete Reservoirs, Mine Waste Facilities, Secondary Containments, Feature Ponds, and Detention Tanks.

## Recent Projects (Full Project History can be provided upon request)

### Nanaimo North Slope Closure | Nanaimo, BC | 2022

- 40 mil LLDPE – 16,670 m<sup>2</sup>
- Geotextile – 16,670 m<sup>2</sup>

### Comox Landfill Cell 2 Expansion and Leachate Pond | Comox, BC | 2022

- 60 mil HDPE – 74,140 m<sup>2</sup>
- Geotextile – 34,390 m<sup>2</sup>
- Geocomposite – 23,190 m<sup>2</sup>
- GCL – 57,580 m<sup>2</sup>

### YVR Fuel Upgrade | Richmond, BC | 2022

- 40 mil HDPE White – 13,480 m<sup>2</sup>
- Geotextile – 26,960 m<sup>2</sup>

### Jordan River Closure | Jordan River, BC | 2021

- 40 mil LLDPE DST – 3,600 m<sup>2</sup>
- Geotextile – 3,600 m<sup>2</sup>
- Wind Defender – 3,600 m<sup>2</sup>

### Pattison Landfill Closure | Delta, BC | 2021

- 40 mil LLDPE DST – 40,000 m<sup>2</sup>
- Geotextile – 54,000 m<sup>2</sup>

### Meadowlands Landfill Closure | Delta, BC | 2021

- 40 mil LLDPE DST – 7,000 m<sup>2</sup>
- Geotextile – 8,000 m<sup>2</sup>

#### Highwest Landfill Closure | Victoria, BC | 2021

- 40 mil LLDPE DST – 22,000 m<sup>2</sup>
- Geocomposite – 5,400 m<sup>2</sup>
- Geotextile – 22,000 m<sup>2</sup>

#### Coquitlam Transfer Station Landfill Closure | Coquitlam, BC | 2021

- 40 mil LLDPE DST – 14,000 m<sup>2</sup>
- Geocomposite – 11,000 m<sup>2</sup>
- Geotextile – 3,000 m<sup>2</sup>

#### Afton Tailings Dam Raise | Kamloops, BC | 2020

- 60 mil LLDPE – 20,000 m<sup>2</sup>

#### Glenmore Landfill Area 1 | Kelowna, BC | 2020

- 60 mil HDPE DST – 21,500 m<sup>2</sup>
- GCL – 21,500 m<sup>2</sup>
- Geotextile – 21,500 m<sup>2</sup>

#### Vancouver Landfill Phase 4 Closure | Delta, BC | 2020 - Present

- 40 mil LLDPE DST – 150,820 m<sup>2</sup>
- Geotextile – 522,800 m<sup>2</sup>
- Geocomposite – 34,400 m<sup>2</sup>
- 30 mil LLDPE DST – 34,400 m<sup>2</sup>
- 60 LLDPE DST – 45,200 m<sup>2</sup>
- GCL – 29,500 m<sup>2</sup>

#### Annacis Island Super Grip Net Welding | New Westminster, BC | 2019-2020

- Extruding – 5,400 l.m.
- Patches – 2,100 ea

#### Squamish Landfill Stage 3 MSE Wall | Squamish, BC | 2019

- 60 mil HDPE – 2,500 m<sup>2</sup>
- Geotextile – 2,500 m<sup>2</sup>

#### Mission Landfill Phase C Closure | Mission, BC | 2019

- 40 mil LLDPE DST – 9,700 m<sup>2</sup>
- Geotextile – 9,700 m<sup>2</sup>
- Geocomposite – 9,700 m<sup>2</sup>

#### Coronation Cell 3 Landfill Expansion | Coronation, AB | 2019

- 60 mil HDPE DST – 13,600 m<sup>2</sup>
- GCL – 2,500 m<sup>2</sup>
- Geocomposite – 18,000 m<sup>2</sup>

#### Fox Creek Landfill Cap | Fox Creek, AB | 2019

- 40 mil LLDPE DST – 71,400 m<sup>2</sup>
- Wind Defender – 71,400 m<sup>2</sup>
- Geocomposite – 3,700 m<sup>2</sup>

Janvier 6A Repair | Janvier, AB | 2019

- 60 mil HDPE DST – 37,600 m<sup>2</sup>
- Geocomposite – 37,600 m<sup>2</sup>

## Recent Projects (Full Project History can be provided upon request)

### Kamloops Recovery Centre Landfill Expansion | Kamloops, BC | 2023

- 60 mil HDPE DST – 24,400 m<sup>2</sup>
- GCL – 24,400 m<sup>2</sup>
- Geotextile – 18,900 m<sup>2</sup>

### Secure Fox Creek West Landfill Capping | Fort St. John, BC | 2022-2023

- 60 mil HDPE DST – 105,100 m<sup>2</sup>
- 40 mil LLDPE – 102,000 m<sup>2</sup>
- Geocomposite – 25,900 m<sup>2</sup>

### Revelstoke Landfill Phase 1 Progressive Closure | Revelstoke, BC | 2022

- 40 mil LLDPE DST – 25,250 m<sup>2</sup>
- Geotextile – 75,750 m<sup>2</sup>

### Provost Storage Cell C | Provost, AB | 2022

- 60 mil HDPE SST – 72,000 m<sup>2</sup>

### Willesden Green Landfill Expansion | Rocky Mountain House, AB | 2022

- 60 mil HDPE DST – 37,900 m<sup>2</sup>
- Geocomposite – 38,400 m<sup>2</sup>

### Secure Pembina Cell 9 Expansion | Drayton Valley, AB | 2022

- 60 mil HDPE DST – 26,500 m<sup>2</sup>
- Geocomposite – 26,500 m<sup>2</sup>
- GCL – 3,200 m<sup>2</sup>

Secure Pembina Cell 5,6 & 7 Capping | Drayton Valley, AB | 2022

- 40 mil LLDPE – 62,000 m<sup>2</sup>
- 55 mil Geomembrane Ballast – 58,000 m<sup>2</sup>
- Geocomposite – 17,000 m<sup>2</sup>

Willesden Green Landfill Cap | Rocky Mountain House, AB | 2022

- 40 mil LLDPE DST – 62,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 73,000 m<sup>2</sup>
- Geocomposite – 19,000 m<sup>2</sup>

Prince Rupert Landfill Cap | Prince Rupert, BC | 2021

- 40 mil LLDPE DST – 11,000 m<sup>2</sup>
- Geotextile – 33,000 m<sup>2</sup>

Prince Rupert Landfill Expansion | Prince Rupert, BC | 2021

- 60 mil HDPE DST – 25,000 m<sup>2</sup>
- GCL – 25,000 m<sup>2</sup>
- Geotextile – 50,000 m<sup>2</sup>

Fox Creek Landfill Cap | Fox Creek, AB | 2021

- 40 mil LLDPE DST – 25,300 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 23,000 m<sup>2</sup>

Northern Rockies Landfill Expansion | Fort Nelson, BC | 2021

- 60 mil HDPE DST – 11,300 m<sup>2</sup>
- GCL – 11,200 m<sup>2</sup>
- Geocomposite – 23,800 m<sup>2</sup>

Northern Rockies Landfill Cap | Fort Nelson, BC | 2021

- 40 mil LLDPE DST – 7,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 9,100 m<sup>2</sup>
- Geocomposite – 1,600 m<sup>2</sup>

Willesden Green Landfill Cap | Rocky Mountain House, AB | 2021

- 40 mil LLDPE DST – 48,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 48,000 m<sup>2</sup>
- Geocomposite – 10,000 m<sup>2</sup>

Willow Creek Landfill Cap | Hinton, AB | 2021

- 40 mil LLDPE DST – 96,500 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 106,000 m<sup>2</sup>
- Geocomposite – 28,300 m<sup>2</sup>

Trochu Waste Water Lagoon | Trochu, AB | 2020

- 60 mil HDPE Smooth – 76,000 m<sup>2</sup>
- 60 mil HDPE SST – 22,000 m<sup>2</sup>
- Geotextile – 98,000 m<sup>2</sup>

Gold Creek Cap | Grande Prairie, AB | 2020

- 40 mil LLDPE DST – 45,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 47,000 m<sup>2</sup>
- Geocomposite – 4,100 m<sup>2</sup>

Prince Rupert Leachate Lagoon | Prince Rupert, BC | 2020

- 60 mil HDPE DST – 5,400 m<sup>2</sup>
- GCL – 5,400 m<sup>2</sup>

Wapiti Landfill Cell 4 | Grande Prairie, AB | 2020

- 60 mil HDPE DST – 24,000 m<sup>2</sup>
- Geocomposite – 24,000 m<sup>2</sup>

Silverberry Landfill Cap | Fort St. John, BC | 2020

- 40 mil LLDPE DST – 47,100 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 39,400 m<sup>2</sup>
- Geocomposite – 34,400 m<sup>2</sup>

Ridley Terminal Pond | Prince Rupert, BC | 2020

- 60 mil HDPE Smooth – 8,000 m<sup>2</sup>
- 12oz Nonwoven Geotextile – 8,000 m<sup>2</sup>

New Afton Gold Mine | Kamloops, BC | 2019

- 60 mil LLDPE Smooth – 26,500 m<sup>2</sup>

Blackfalds Detention Tank | Blackfalds, AB | 2019

- 60 mil HDPE – 300 m<sup>3</sup> (2 Tanks)
- 80 mil HDPE – 550 m<sup>3</sup>

Babkirk Landfill Cell 1A Cap | Wonowon, BC | 2019

- 40 mil LLDPE DST – 15,500 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 16,000 m<sup>2</sup>
- Geocomposite – 2,000 m<sup>2</sup>

Silverberry Landfill Cap | Fort St. John, BC | 2019

- 40 mil LLDPE Microspike – 68,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 78,000 m<sup>2</sup>
- Geocomposite – 7,500 m<sup>2</sup>

Harmac Mills Landfill Expansion | Nanaimo, BC | 2018

- 60 mil HDPE DST (extra rough texturing) – 40,000 m<sup>2</sup>
- 16 oz Nonwoven Geotextile – 40,000 m<sup>2</sup>

Silverberry Landfill Cap Phase 1 | Fort St. John, BC | 2018

- 40 mil LLDPE DST – 50,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 50,000 m<sup>2</sup>
- Geocomposite – 9000 m<sup>2</sup>

**Silverberry Landfill Cap BGM Repair | Fort St. John, BC | 2018**

- 40 mil LLDPE DST – 45,000 m<sup>2</sup>
- Wind Defender 55 mil Liner Ballast – 45,000 m<sup>2</sup>
- S6 Platipus Soil Anchors - 100

**Willesden Green Cell 4 | Rocky Mountain House, AB | 2018**

- 60 mil HDPE DST – 50,000 m<sup>2</sup>
- Geocomposite – 50,000 m<sup>2</sup>
- GCL – 6000 m<sup>2</sup>

**3<sup>rd</sup> and Chesterfield Development Vapor Barrier| North Vancouver, BC | 2018**

- 80 mil HDPE Textured – 3,000 m<sup>2</sup>
- 12 oz Geotextile – 6,000 m<sup>2</sup>
- SS304 Mechanical Attachment Liner to Concrete – 600 m

**Big Valley Landfill Cell 2E North | Big Valley, AB | 2017**

- 60 mil HDPE DST – 25,000 m<sup>2</sup>
- Geocomposite – 25,000 m<sup>2</sup>
- GCL – 600 m<sup>2</sup>

**Thorhild Landfill Cell 2A | Thorhild, AB | 2017**

- 60 mil HDPE DST – 155,000 m<sup>2</sup>
- Geocomposite – 155,000 m<sup>2</sup>
- GCL – 5,500 m<sup>2</sup>
- Geonet – 5,500 m<sup>2</sup>

**Marshall Landfill Expansion | Marshall, AB | 2017**

- 60 mil HDPE DST – 25,000 m<sup>2</sup>
- Geocomposite – 25,000 m<sup>2</sup>
- GCL – 25,000 m<sup>2</sup>

**Bonnyville Landfill | Bonnyville, AB | 2017**

- 60 mil HDPE DST – 35,000 m<sup>2</sup>
- Geocomposite – 30,000 m<sup>2</sup>
- GCL – 3,000 m<sup>2</sup>
- Geotextile – 2,000 m<sup>2</sup>

**Thorhild Landfill Cell 1C | Thorhild, AB | 2017**

- 60 mil HDPE DST – 60,000 m<sup>2</sup>
- Geocomposite – 30,000 m<sup>2</sup>
- GCL – 2,000 m<sup>2</sup>
- Geotextile – 30,000 m<sup>2</sup>
- Geonet – 2,000 m<sup>2</sup>

**Delta Grand Lagoon | Kelowna, BC | 2017**

- 80 mil HDPE Smooth Conductive – 5,500 m<sup>2</sup>

Ucluelet Sewage Pond | Ucluelet, BC | 2017

- 80 mil HDPE Smooth – 12,000 m<sup>2</sup>
- Geotextile – 12,000 m<sup>2</sup>

Chetwynd Landfill Closure Cap | Chetwynd, BC | 2016

- 40 mil LLDPE DST – 14,000 m<sup>2</sup>
- Geotextile – 28,000 m<sup>2</sup>

Golden Wastewater Treatment Plant Upgrades | Golden, BC | 2016

- 60 mil HDPE DST – 6,000 m<sup>2</sup>
- Geotextile – 6,000 m<sup>2</sup>

Coronation Landfill Expansion | Coronation, AB | 2016

- 60 mil HDPE DST – 20,000 m<sup>2</sup>
- Geocomposite – 20,000 m<sup>2</sup>

Highest Landfill Cell 3 and 4 Expansion | Victoria, BC | 2016

- 60 mil HPE DST – 12,000 m<sup>2</sup>
- Geocomposite – 12,000 m<sup>2</sup>
- GCL – 12,000 m<sup>2</sup>

Hartland Landfill | Victoria, BC | 2016

- 60 mil LLDPE DST – 22,000 m<sup>2</sup>
- Geotextile – 22,000 m<sup>2</sup>

Sulphur Block Closure Pad | Rainbow Lake, AB | 2016

- 40 mil HDPE – 35,000 m<sup>2</sup>
- Geotextile – 35,000 m<sup>2</sup>

Forceman Landfill | Terrace, BC | 2016

- 60 mil HDPE – 70,000 m<sup>2</sup>
- Geocomposite – 70,000 m<sup>2</sup>
- GCL – 70,000 m<sup>2</sup>

Comox Landfill | Comox, BC | 2016

- 60 mil HDPE DST – 82,000 m<sup>2</sup>
- GCL – 21,000 m<sup>2</sup>

Secure Fox Creek | Fox Creek, AB | 2016

- 60 mil HDPE DST – 30,000 m<sup>2</sup>
- Geocomposite – 30,000 m<sup>2</sup>
- GCL – 1,000 m<sup>2</sup>

McGregor Country Estates | Vulcan, AB | 2015

- 60 mil HDPE Smooth – 30,000 m<sup>2</sup>

### Newalta Landfill | Elk Point, AB | 2015

- 60 mil HDPE DST – 51,000 m2
- Geocomposite – 51,000 m2
- GCL – 1,000 m2

### Silverberry Landfill | Silverberry, AB | 2015

- 60 mil HDPE DST – 42,000 m2
- Geocomposite – 42,000 m2
- GCL – 1,000 m2

### Afton Dam Raise | Kamloops, BC | 2015

- 60 mil LLDPE Smooth – 3,000 m2

### Eagle Creek Reservoir | West Vancouver, BC | 2015

- 80 mil HDPE Smooth – 3,000 m2

### Cross Iron Cistern | Calgary, AB | 2015

- 60 mil HDPE Smooth – 1,000 m2

### Norm Castione | Okotoks, AB | 2015

- 60 mil HDPE – 1,500 m2

### Janvier Repair | Janvier, AB | 2015

- 60 mil HDPE DST – 8,000 m2
- Geocomposite – 10,000 m2

### Janvier Landfill Cap | Janvier, AB | 2015

- Geocomposite – 11,500 m2

### Cargill | High River, AB | 2015

- 60 mil HDPE Smooth – 45,000 m2
- Geocomposite – 24,000 m2
- GCL – 24,000 m2
- Geonet – 23,000 m2

### AOC | Fox Creek, AB | 2015

- 40 mil LLDPE DST – 30,000 m2
- Geotextile – 30,000 m2

### Ridley Terminal | Kitimat, BC | 2014

- 60 mil HDPE Smooth – 7,000 m2

### CCS Tower Road | Carrot Creek, AB | 2014

- 60 mil HDPE DST – 22,000 m2
- Geocomposite – 22,000 m2
- GCL – 1,000 m2

### CCS Rainbow Lake | Rainbow Lake, AB | 2014

- 60 mil HDPE DST – 32,000 m2

## Site Supervisor – Kristopher Wood

---

- Geocomposite – 32,000 m<sup>2</sup>
- GCL – 32,000 m<sup>2</sup>

### Secure Saddle Hills | Gordondale, AB | 2014

- 60 mil HDPE DST – 40,000 m<sup>2</sup>
- Geocomposite – 40,000 m<sup>2</sup>
- GCL – 2,000 m<sup>2</sup>

### Thorhild Landfill Cell 1A South | Thorhild, AB | 2014

- 60 mil HDPE DST – 255,000 m<sup>2</sup>
- Geocomposite – 60,000 m<sup>2</sup>
- GCL – 6,000 m<sup>2</sup>
- Geotextile – 70,000 m<sup>2</sup>
- Geonet – 11,000 m<sup>2</sup>

### Vancouver Landfill | Delta, BC | 2013

- 40 mil LLDPE DST – 265,000 m<sup>2</sup>

### Hartland Landfill | Victoria, BC | 2013

- 60 mil HDPE DST – 22,000 m<sup>2</sup>

### Frac Pond | Fox Creek, AB | 2013

- 40 mil LLDPE – 20,000 m<sup>2</sup>

### Wabasca Landfill | Wabasca, AB | 2013

- 60 mil HDPE DST – 20,000 m<sup>2</sup>

### South Fraser Landfill | Delta, BC | 2011

- 40 mil LLDPE – 98,000 m<sup>2</sup>

### Suncor Landfill | McKay River, AB | 2011

- 60 mil HDPE – 20,000 m<sup>2</sup>

### Creston Landfill | Peace River, BC | 2011

- 40 mil LLDPE – 15,000 m<sup>2</sup>

### Skway Landfill | Chilliwack, BC | 2011

- 40 mil LLDPE – 11,000 m<sup>2</sup>

### Omni Peace Landfill | Peace River, BC | 2011

- 60 mil HDPE – 20,000 m<sup>2</sup>

## AGREEMENT BETWEEN THE OWNER AND CONTRACTOR

CAPITAL REGIONAL DISTRICT

30.22.06-03 CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER

**AGREEMENT BETWEEN THE OWNER AND CONTRACTOR**

THIS AGREEMENT made this \_\_\_\_\_ day of \_\_\_\_\_ in the year 20\_ by and between the Capital Regional District, herein called the "Owner", and \_\_\_\_\_, herein called the "Contractor".

WITNESSETH: That the Contractor and the Owner undertake and agree as follows:

ARTICLE 1.

The Contractor shall:

- i) Be and assume the responsibilities of the Prime Contractor as defined in Part 3 of the Workers' Compensation Act of the Province of British Columbia, and note this fact on the Notice of Project submitted to WorkSafeBC, and comply with the provisions and amendments thereto of the Workers' Compensation Act of the Province of British Columbia, the WorkSafeBC Occupational Health and Safety Regulation and all other applicable federal, provincial, regional, and municipal laws, regulations, ordinances, codes, policies and procedures.
- ii) Provide all necessary materials, labour, supervision and equipment and perform all work, and fulfil everything as set forth and in strict accordance with the Contract Documents and 4 Addenda for the project entitled "CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER 30.22.06-03".
- iii) Commence to proceed actively with the work of the Contract within a period of FOURTEEN (14) CALENDAR DAYS of receipt of the Notice to Proceed and complete all Cell 4 liner construction work under this Contract by September 30, 2024 subject to the provisions herein for the extension of Contract time, and shall guarantee all materials furnished and work performed, for a period of One (1) YEAR from the date of substantial completion contained in the Certificate of Completion.

ARTICLE 2.

The Owner will pay to the Contractor as full compensation for the performance and fulfilment of this Contract, the sum or sums of money specified herein in the manner and at the times specified in the Contract Documents.

ARTICLE 3.

The Invitation to Tender, Instructions to Tenderers, executed Tender Form, General Conditions, Supplemental General Conditions, Specifications, Appendices, Drawings and all Addenda incorporated herein, are annexed hereto and form a part of this Agreement as fully to all intents and purposes as though recited in full herein, and the whole shall constitute the Contract between

the parties, and it shall inure to the benefit of and be binding upon them and their successors, executors, administrators, and assigns.

ARTICLE 4.

No implied contract of any kind whatsoever, by or on behalf of the Owner, shall arise or be implied from anything contained in this Contract or from any position or situation of the parties at any time, it being understood and agreed that the express contracts, covenants and agreements contained herein and made by the parties hereto are and shall be the only contracts, covenants and agreements on which any rights against the Owner may be founded.

ARTICLE 5.

Subject to Article 3, this Agreement shall supersede all communications, negotiations and agreements, either written or verbal, made between the parties hereto in respect of matters pertaining to this Agreement prior to the execution and delivery hereof.

ARTICLE 6.

All communication in writing between the parties or between them and the Engineer shall be deemed to have been received by the addressee, or to a member of the firm, or any officer of the corporation for whom they are intended as per the following delivery schedule conditions:

- i) By hand – on the date of delivery of the communication
- ii) By facsimile – ONE (1) CALENDAR DAY following date of the communication
- iii) By registered mail – THREE (3) CALENDAR DAYS following date of the communication
- iv) By regular mail – SEVEN (7) CALENDAR DAYS following date of the communication

If, between the time of mailing and the actual receipt of the communication, there occurs a mail strike, slowdown of postal service, or other labour dispute which affects the delivery of such communication, then such communication shall be deemed to be received when actually delivered.

PERFORMANCE BOND

CAPITAL REGIONAL DISTRICT

30.22.06-03 CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER

**PERFORMANCE BOND**

KNOW ALL PERSONS BY THESE PRESENTS THAT

\_\_\_\_\_ as Contractor,  
(hereinafter called the Contractor), and

\_\_\_\_\_ as Surety,  
(hereinafter called the Surety) are held and firmly bound unto

THE CAPITAL REGIONAL DISTRICT, as Owner, hereinafter called the Owner, in the amount of FIFTY PERCENT (50%) of the TOTAL TENDERED AMOUNT, namely

\_\_\_\_\_ DOLLARS (\$\_\_\_\_\_)  
lawful money of Canada, for the payment of which sum, well and truly to be made, the Contractor and the Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Contractor has entered into a written Contract with the Owner, dated the \_\_\_\_ day of  
, 20 \_\_\_\_\_.

for: **30.22.06-03 CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER**

in accordance with the Drawings and Specifications submitted therefor which Contract, Drawings, Specifications, and all other Contract Documents, and amendments thereto, to the extent herein provided for, are by reference made part hereof and are hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if the Contractor shall promptly and faithfully perform said Contract then this obligation shall be null and void; otherwise it shall remain in full force and effect.

Whenever the Contractor shall be, and declared by the Owner to be, in default under the Contract, the Owner having performed the Owner's obligations thereunder, the Surety may promptly remedy the default, or shall promptly:

- (1) Complete the Contract in accordance with its terms and conditions, or,
- (2) Obtain a bid or bids for submission to the Owner for completing the Contract in accordance with its terms and conditions, and upon determination by the Owner and Surety of the lowest responsible bidder, arrange for a Contract between such bidder and the Owner and make available as work progresses (even though there should be a default or a succession of defaults under the Contract or Contracts of completion arranged under this paragraph)

sufficient funds to pay the cost of completion less the balance of the contract price, but not exceeding, including other costs and damages for which the Surety may be liable hereunder, the amount set forth in the first paragraph hereof. The term "Balance of the Contract Price" as used in this paragraph, shall mean the total amount payable by the Owner to the Contractor under the Contract less the amount paid by the Owner to the Contractor.

Any suit under this Bond must be instituted before the expiration of TWO (2) YEARS from the date on which the Notice of Acceptance is issued.

The Surety shall not be liable for a greater sum than the specified penalty of this Bond.

No right of action shall accrue on this Bond to or for the use of any person or corporation other than the Owner named  
herein or the heirs, executors, administrators or successors of the Owner.

IN TESTIMONY WHEREOF, the Contractor has hereto set its hand and affixed its seal, and the Surety has caused these presents to be sealed with its corporate seal duly attested by the signature of its Attorney-in-fact, this \_\_\_\_\_ day of \_\_\_\_\_ 20\_\_\_\_.

In the case of incorporated company:

LABOUR AND MATERIALS PAYMENT BOND

CAPITAL REGIONAL DISTRICT

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**LABOUR AND MATERIALS PAYMENT BOND**

KNOW ALL PERSONS BY THESE PRESENTS THAT:

\_\_\_\_\_ as Contractor,  
(hereinafter called the Contractor), and

\_\_\_\_\_ as Surety,  
(hereinafter called the Surety), are held and firmly bound unto

THE CAPITAL REGIONAL DISTRICT, \_\_\_\_\_ as  
Owner, its successors or assigns, as obligee, hereinafter called the Owner, for the use and benefit of  
claimants as herein below defined, in the amount of FIFTY PERCENT (50%) of the TOTAL TENDERED  
AMOUNT, namely

\_\_\_\_\_ DOLLARS, (\$ \_\_\_\_\_)  
lawful money of Canada for payment of which sum, well and truly to be made, the Contractor and the  
Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and  
severally, firmly by these presents.

WHEREAS, the Contractor has entered into a written Contract with the Owner, dated the \_\_\_\_ day of  
\_\_\_\_\_, 20 \_\_.

for: CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER 30.22.06-03

in accordance with the Drawings and Specifications submitted therefor which Contract, Drawings,  
Specifications and all other Contract Documents, and amendments thereto, to the extent herein  
provided for, are by reference made part hereof and are hereinafter referred to as the Contract.

NOW THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if the Contractor shall  
promptly make payment to all claimants as hereinafter defined, for all labour and material used or  
reasonably required for use in the performance of the Contract then this obligation shall be void,  
otherwise it will remain in full force and effect, subject, however, to the following conditions:

- (1) A claimant is defined as one having a direct Contract with the Contractor for labour, material,  
or both, used or reasonably required for use in the performance of the Contract, labour and  
material being construed to include that part of water, gas, power, light, heat, oil, gasoline,  
telephone service or rental of equipment (but excluding rent of equipment where the rent

(2) The above-named Contractor and Surety hereby jointly and severally agree with the Owner that every claimant as herein defined, who has not been paid in full before the expiration of a period of NINETY (90) CALENDAR DAYS after the date on which the last of such claimant's work or labour was done or performed, or materials were furnished by such claimant, may sue on this bond, prosecute the suit to final judgement for such sum or sums as may be justly due the claimant, and have execution thereon.

(a) Unless the claimant shall have given written notice to the Contractor at:

(b) After the expiration of ONE (1) YEAR following the date of which the Contractor ceased work on said Contract including work performed under the guarantees provided in the Contract;

(4) The amount of this bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Sureties of builders liens which may be filed on record against said improvement, whether or not claim for the amount of such lien be presented under and against this bond;

PROVIDED, HOWEVER, that no variation or alteration of the terms of the said Contract made by agreement between the Owner and Contractor, or in the extent, nature or method of performance of the work to be constructed, maintained, and completed thereunder, and no allowances of time by the Owner or Engineer under the said Contract nor in any waiver, forbearance, or forgiveness in or in respect of any matter or thing concerning the said Contract or the conduct or performance thereof by the Contractor on the part of the Owner or the said Engineer, shall in any way release the Surety from any liability under the above-written bond. Notice to the Surety of any such variation, alteration, allowance of time, waiver, forbearance or forgiveness is hereby waived by the Surety.

IN TESTIMONY WHEREOF, the Contractor has hereto set its hand and affixed its seal, and the Surety has caused these presents to be sealed with its corporate seal duly attested by the signature of its Attorney-in-fact, this \_\_\_\_\_ day of \_\_\_\_\_, 20 \_\_\_\_.

CAPITAL REGIONAL DISTRICT

CONSTRUCTION SERVICES FOR HARTLAND LANDFILL CELL 4 LINER  
CONTRACT 30.22.06-03

**GENERAL CONDITIONS**

1. DEFINITIONS

- 1.1. "Calendar Day" shall be defined as 24 hours/day, 365 days of the year, inclusive of all statutory holidays.
- 1.2. "Certificate of Completion" shall have the meaning assigned to it by the *Builders Lien Act*.
- 1.3. "Contract Documents" or "Contract" shall mean the entire agreement between the Owner and Contractor and shall include all of those documents set out in the Table of Contents including the agreement between the Owner and Contractor, the general conditions, specifications and drawings, and tender documents as well as any addenda incorporated therein.
- 1.4. "Contract Price" shall mean the negotiated value of the work which the Owner requires done as stipulated in the Contract.
- 1.5. "Contractor" shall mean the successful Tenderer and the person who enters into the Contract with the Owner.
- 1.6. "Disease" means COVID-19 or other pandemic, epidemic, outbreak, or contagion.
- 1.7. "Disease-Related Reason" means as a shortage of labour, interruption in supply chain, or health and safety of workers and the public resulting directly from a Disease.
- 1.8. "Engineer" shall mean the General Manager of the Parks & Environmental Services department of the Capital Regional District or an authorized representative as designated to the Contractor at the pre-construction meeting.
- 1.9. "Equipment" or "Plant" shall mean anything and everything used by the Contractor in performance of the work, except people, and except material as defined herein.
- 1.10. "Herein" and "Hereof" and similar expressions wherever used in the Contract Document, shall relate to the whole of the Contract Documents, and not to any one paragraph alone, unless the context specifically requires it.
- 1.11. "Material" or "Materials" shall, unless otherwise specified, mean anything and everything other than persons or the Contractor's equipment which is manufactured, processed or transported to the site, or existing on the site, and incorporated into the completed works.
- 1.12. "*Builders Lien Act*" shall mean the *Builders Lien Act*, SBC 1997, c 45 (BC).

- 1.13. "Multi-Employer Site" shall mean location of work which meets the criteria for a multi-employer site as defined by the *Worker's Compensation Act* of the Province of British Columbia.
- 1.14. "Overhead" means the percentage which the Contractor may add to the cost of personnel, equipment and materials supplied on a force account basis and shall include head office overhead, project management, bonding, insurance, site office accommodations, site supervision, clerical and all other expenses incurred by the Contractor in relation to the Work.
- 1.15. "Owner" shall mean the Capital Regional District.
- 1.16. "Payment Certifier" shall mean the person responsible for a payment certification as provided for under the *Builders Lien Act* and for the purposes of this Contract shall mean the Engineer.
- 1.17. "Place of Work" shall mean the location of work as defined by the Contract and can include any or all of the following: Capital Regional District property, non-Capital Regional District property, private property, public property, public or private road.
- 1.18. "Subcontractor" shall mean any person engaged by the Contractor or another subcontractor to perform or provide part or parts of the work or to supply material intended to be incorporated into the completed works, but does not include a worker or a person engaged by an architect, engineer or a material supplier.
- 1.19. "Supply" or "Provide" shall mean supply and pay for or provide and pay for.
- 1.20. "Tenderer" shall mean the person or persons who submit a tender for the work to be done and materials to be supplied.
- 1.21. "Total Tendered Amount" shall mean the Contractor's offer to do all the work called for under the Contract at the total tendered amount (including GST) shown in the Tender Form.
- 1.22. "Work" or "Works" shall, unless the context otherwise requires, mean the whole of the work, equipment, materials, labour, matters and things required to be done, furnished, and performed by the Contractor under this Contract.
- 1.23. "Working Days" shall be defined as the normal working hours of the Capital Regional District which is five (5) days/week (7:00 a.m. to 6:00 p.m.) and excludes all legal holidays.

## 2. INTENT OF CONTRACT

The intent of the Contract is that the Contractor shall provide all materials, supervision, labour, equipment, and all else necessary for the complete performance of the Work. It is not intended, however, that the Contractor shall supply materials, equipment or labour not consistent with, covered by or properly inferable from the Contract Documents.

### 3. DRAWINGS AND SPECIFICATIONS FURNISHED

Except as provided for otherwise, a maximum of three (3) copies of drawings and specifications for the execution of the work shall be furnished to the Contractor without charge. Additional instructions may be issued by the Engineer during the progress of the work by means of drawings or otherwise for clarification of the drawings and specifications, or as may be necessary to explain or illustrate changes in the work to be done. One (1) complete set of all drawings and specifications shall be maintained at the jobsite by the Contractor and shall be available to the Engineer at all times. Additional copies of drawings and specifications may be obtained by the Contractor, on payment of the charge per document set out in the Invitation to Tender.

### 4. DOCUMENT CONFLICTS AND OMISSIONS

4.1. In case of any inconsistency or conflict between the provisions of the Contract Documents, the provisions of such documents and addenda thereto will take precedence and govern in the following order:

- (a) Agreement Between the Owner and Contractor
- (b) Addenda
- (c) Supplemental General Conditions
- (d) General Conditions
- (e) Specifications
- (f) Drawings
- (g) Tender Form
- (h) Instructions to Tenderers
- (i) Invitation to Tender
- (j) All other documents

4.2. Figured dimensions on a drawing take precedence over measurements scaled from the drawing, and large scale drawings take precedence over those of smaller scale. Supplementary drawings and specifications supersede their antecedents. In case of conflict between figured dimensions on a drawing and the dimensions of a specified product, the dimensions of the specified product will govern. The drawings and specifications complement each other and anything called for by one will be as binding as if called for by both.

4.3. Neither party to the Contract shall take advantage of any apparent error or omission in the drawings or specifications, but the Engineer shall be permitted to make such corrections and interpretations as may be necessary for fulfilment of the intent of the drawings and specifications.

### 5. DISCREPANCIES

Any discrepancies found between the drawings and specifications or any errors or omissions in the drawings or specifications shall immediately be reported to the Engineer, who shall promptly correct

such error or omission in writing. Any work done after discovery of such discrepancies, errors or omissions shall be done at the Contractor's risk.

## 6. CONTRACT INTERPRETATION AND DECISIONS

- 6.1. The Engineer will be, in the first instance, the interpreter of the Contract Documents and the judge of the performance of both parties to the Contract. Interpretations and decisions of the Engineer shall be consistent with the Contract Documents and made in consultation with both parties. In making a decision the Engineer will not show partiality to either the Owner or the Contractor.
- 6.2. Either the Owner or the Contractor may at any time, by written request in sufficient detail and accompanied by sufficient supporting documentation to reasonably describe the matter, refer any question, including claims relating to the performance of the work or the interpretation of the Contract Documents, to the Engineer for an initial decision and the Engineer shall render a written decision within a reasonable time, with copies to both the Owner and the Contractor.
- 6.3. If a party does not agree with an interpretation or decision of the Engineer then resolution of the matter shall be dealt with in accordance with the provisions of Article 58.

## 7. SHOP DRAWINGS

- 7.1. The Contractor shall furnish to the Engineer, at proper times, all shop drawings including diagrams, illustrations, schedules, performance charts, brochures and other data necessary to clarify the work intended or to show its relation to adjacent work of other trades. The Contractor shall provide such additional drawings and shall make any changes or additions to such drawings or diagrams which the Engineer may require consistent with the Contract and will submit sufficient copies of the revised prints for review, all but three (3) of which shall be returned to the Contractor following review.
- 7.2. Prior to submission to the Engineer the Contractor shall review all shop drawings. By this submission, the Contractor represents that it has determined and verified all field measurements, field construction criteria, materials, catalogue numbers and similar data and that it has checked and coordinated each shop drawing with the requirements of the work and of the Contract Documents.
- 7.3. The Contractor shall submit shop drawings to the Engineer for review with reasonable promptness and in orderly sequence so as to cause no delay in the work of other contractors. If either the Contractor or the Engineer so requests, they shall jointly prepare a schedule fixing the dates for submission and return of shop drawings. Shop drawings shall be submitted in the form of a reproducible transparency or prints as the Engineer may direct. At the time of submission, the Contractor shall notify the Engineer in writing of any deviations in the shop drawings from the requirements of the Contract Documents.
- 7.4. The Engineer will review and return shop drawings in accordance with any schedule agreed upon, or otherwise with reasonable promptness so as to cause no delay. The Engineer's

review shall be for conformity to the design concept and for general arrangement only and such review shall not relieve the Contractor of responsibility for errors or omissions in the shop drawings or of responsibility for meeting all requirements of the Contract Documents unless a deviation on the shop drawings has been specifically approved in writing by the Engineer.

- 7.5. The Contractor shall make any changes in shop drawings which the Engineer may require consistent with the Contract Documents and resubmit unless otherwise directed by the Engineer. When resubmitting, the Contractor shall notify the Engineer in writing of any revisions other than those requested by the Engineer.

## 8. LOCATION OF THE WORKS

- 8.1. Where location dimensions for the works are not shown on the drawings, the locations are intended as being approximate.
- 8.2. Unless otherwise specified, the Engineer will show the locations of legal survey markers and survey monuments on the drawings and will provide an elevation bench mark. The Contractor shall perform all detailed layout and shall be responsible for all necessary detailed layout dimensions and elevations.
- 8.3. The Contractor shall carefully preserve bench marks, reference points, and stakes. In case of wilful or careless destruction or disturbance of such markers, Contractor shall be charged with the expense of replacing them and shall be responsible for any mistakes that may be caused by their destruction, loss, or disturbance.
- 8.4. Legal survey markers, disturbed or removed by the construction operation, that existed at a horizontal distance of 1.5 metres or more from the work being installed shall be replaced at the Contractor's expense. If it is necessary to remove or disturb existing legal survey markers that are within 1.5 metres of the work, the Engineer shall be so notified before such removal or disturbance, and replacement will be at the Owner's expense.

## 9. INVESTIGATION BY CONTRACTOR OF CONDITIONS AFFECTING WORK

The Contract between Owner and Contractor is made and entered into by the Contractor and the Owner on the distinct understanding that the Contractor has, before execution, investigated and satisfied itself of everything and of every condition affecting the work to be executed and the labour and material to be provided, that the execution of this Contract by the Contractor is founded and based upon Contractor's examination, knowledge, information and judgement, and not upon any statement, representation or information made or given or upon any information derived from any representative of the Owner; and furthermore, the Contractor shall make no claim against the Owner for any loss or damage sustained in consequence of or by reason of any such statement, representation or information being incorrect or inaccurate.

## 10. ENGINEER'S STATUS

- 10.1. The Engineer will be the Owner's representative during the construction period and will observe work in progress on behalf of the Owner. The Engineer will have the authority to stop the work whenever such stoppage may be necessary, in Engineer's opinion, to ensure the proper execution of the work in accordance with the provisions of the Contract. The Contractor shall obey such order immediately. Neither the giving or carrying out of such orders shall thereby entitle the Contractor to any extra payment.
- 10.2. The Contractor shall obey, perform and comply with the Engineer's orders or instructions with respect to the work or concerning the conduct thereof promptly, efficiently and to the satisfaction of the Engineer. However, if the Contractor is of the opinion that such orders or instructions are not authorized under the provisions of the Contract or involve a change for which a change order should be issued as described in Article 42, Contractor shall so notify the Engineer in writing before proceeding to carry them out and, in any event, within TEN (10) CALENDAR DAYS of the receipt of such orders or instructions. If the Contractor does not so notify the Engineer within the time so limited, Contractor shall not claim at any time thereafter that the orders or instructions were not authorized or should have been subject to a change order. Nevertheless, the giving of such notice to the Engineer shall not relieve the Contractor of its obligations to carry out and obey such orders and instructions.
- 10.3. The Engineer may delegate to other persons such of the powers of the Engineer as the Engineer deems appropriate.
- 10.4. The Engineer or the Owner may appoint any person or company or the employee of any such person or company or of the Engineer to be an Inspector. Such Inspector shall have the authority of the Engineer to reject materials, procedures or workmanship as not complying with provisions of the Contract and to order the Contractor to stop work until the materials, procedures or workmanship comply with such provisions.

## 11. INSPECTION OF WORK

- 11.1. The Contractor shall allow the Engineer and/or Owner or their duly appointed Inspector access and provide adequate facilities for access to any part of the works at all times. If the specifications, Engineer's instructions, laws, ordinances or any public authority requires any work to be specially tested or approved, the Contractor shall give the Engineer 24 hours minimum notice of Contractor's preparedness for such inspection, and if the inspection is by an authority other than the Engineer, of the date fixed for such inspection. The Engineer will inspect the work promptly and without causing unreasonable delay to the Contractor. Extra payment will not be made to the Contractor for delay occasioned by an inspection, and extension of completion time will not be allowed for delay resulting therefrom.
- 11.2. On request by the Engineer, the Contractor shall open for inspection any part of the work that has been covered up. If the Contractor refuses to comply with such request, the Owner may employ other persons to uncover the work. If the work is found to be in accordance with the Contract requirements then the cost of uncovering and recovering the work shall be borne by the Owner. If any of the work was covered by the Contractor in contravention of the Engineer's instructions, or if the uncovered work is found not to be in accordance with the

Contract requirements, then the cost of uncovering and recovering the work shall be charged to the Contractor.

- 11.3. The lack of comment on the part of the Engineer on methods of construction employed by the Contractor shall not relieve the Contractor of responsibility for any errors therein, and shall not be regarded as an acceptance for work done by the Contractor.

## 12. SUPERVISION AND LABOUR

The Contractor shall keep on the work at all times during its progress a competent superintendent who is approved by the Engineer, which approval may be withdrawn at any time. The superintendent shall represent the Contractor in their absence and directions given to superintendent shall be held as being given to the Contractor. The superintendent shall give efficient and effective supervision to the work until its completion.

## 13. LANDS BY OWNER

The Owner will provide the lands upon which the work is to be performed. Where work is to be performed on lands owned by others, the Owner will obtain the necessary easements or rights-of-way. The Owner will endeavour to obtain the necessary easements or rights-of-entry in time to permit construction to proceed as scheduled by the Contractor. When this is not possible, the Contractor shall withhold work on property owned by others until such time as easements or rights-of-entry have been obtained. Delay in providing these lands, or in obtaining easements or rights-of-way which, in the opinion of the Engineer, delays the work or results in extra cost to the Contractor, will be deemed proper cause for adjustment in the time of completion and adjustment of the Contract amount to cover the extra cost to the Contractor.

## 14. LANDS REQUIRED BY CONTRACTOR

Any lands other than those which are to be provided by the Owner and which may be required by the Contractor for temporary facilities, storage purposes, or access to the work site, shall be obtained by the Contractor at no cost to the Owner.

## 15. PRIVATE LAND

- 15.1. It shall be the Contractor's responsibility to ascertain the boundaries within which the work must be confined. The Contractor shall not enter lands other than those provided by the Owner for any purpose without obtaining prior written permission of the land owners and occupiers. The Contractor shall not enter upon lands owned by others on which the Owner has easements or rights-of-entry without having received the written authorization of the Owner for such entry. It shall be the Contractor's responsibility to ascertain from the Owner the conditions on which easements or rights-of-entry have been granted on private lands and to abide by these conditions throughout the course of construction. Any supplementary construction agreements made between the Contractor and the owner of private property in lieu of or in addition to the condition sheets provided by the Owner and forming part of this

document shall be signed by the Owner and an authorized representative of the Contractor and a copy forwarded to the Engineer.

- 15.2. The Owner will not be responsible for any supplementary construction agreements other than those to which the Owner is a signed party.

#### 16. ASSIGNMENT OF CONTRACT

Neither party shall sublet, sell, transfer, assign, or otherwise dispose of the Contract or any portions thereof, or its right, title, or interest herein, or its obligations thereunder without written consent of the other party, except for an assignment to a bank of the payments to be received hereunder.

#### 17. SUSPENSION OF WORK BY OWNER

The Owner may at any time suspend the work, or any portion thereof, provided it gives the Contractor FIVE (5) CALENDAR DAYS written notice of suspension. The Contractor shall resume work upon written notice of the Owner within TEN (10) CALENDAR DAYS after the date set forth in such notice, or in a subsequent notice to resume work. The Owner will reimburse the Contractor for costs and expenses incurred by the Contractor necessitated by such suspension of work or portion thereof, but the Contractor shall not recover from the Owner payment for any loss of anticipated profits or damages.

#### 18. OWNER'S TERMINATION OF THE CONTRACTOR'S RIGHTS

- 18.1. The Owner will have the right to terminate the Contractor's right to continue with the work if the Contractor at any time becomes bankrupt, makes an assignment of Contractor's property for the benefit of the creditors, or if a receiver or liquidator should be appointed. Such termination shall be effective upon the Owner giving notice thereof.

- 18.2. If at any time the Engineer is of the opinion and so states in writing to the Owner that the Contractor:

- (a) Has failed to commence work or to recommence work after a suspension within the time specified in the Contract Documents;
- (b) Has failed or is failing to furnish or to maintain a detailed work schedule and plan of operation as required by Article 41 herein;
- (c) Has failed or is failing to use diligence or has failed to comply with the instructions of the Engineer to expedite Contractor's work or is otherwise failing to make such progress with the work as is necessary to ensure the completion of the work or any part thereof in the time specified in the Contract Documents;
- (d) Has failed or is failing to supply enough competent workmen, management, materials or suitable equipment; or

- (e) Has become in any way unable to carry on the work or any part thereof;

the Owner may give notice in writing to the Contractor of such opinion and requiring that such default or defaults be remedied forthwith. If, within FIVE (5) CALENDAR DAYS of such notice, such default or defaults are not remedied to the satisfaction of the Engineer, the Owner may terminate the Contractor's right to perform further the work under the Contract. Such termination shall be effective immediately.

18.3. Upon such termination, the Owner may employ such means as it sees fit to complete the works. In such cases:

- (a) The Contractor shall have no claim for any further payment in respect of work performed, but shall be liable for all damages and expenses which may be suffered by the Owner by reason of such default or delay, or the non-completion by the Contractor of the works;
- (b) No objection or claim shall be raised or made by the Contractor by reason of or on account of the ultimate cost of the works so taken over for any reason proving greater than, in the opinion of the Contractor, it should have been;
- (c) All materials and all rights, proprietary or otherwise, licences, powers, and privileges, whether relating to or affecting real or personal property, acquired, possessed, or provided by the Contractor for the purposes of the work under the provisions of this Contract will become or remain and be the property of the Owner for all purposes incidental to the completion of the work and may be used, exercised, and enjoyed by the Owner as fully to all intents and purposes connected with the works as they might therefore have been used, exercised and enjoyed by the Contractor; and
- (d) The Owner may forthwith enter into possession of all the Contractor's equipment on the site of the work and may use the same in any way it sees fit in order to complete the works without the Owner being in any way liable for damage or any other cost in connection with such use by the Owner. Upon completion of the work, such equipment may be returned to the Contractor or may be sold by the Owner and the net proceeds of such sale credited to the Contractor's account.

18.4. If the Contractor's right to perform the work is terminated in accordance with the provisions of this clause, the Contractor shall not be entitled to receive any further payment until the work is completed.

18.5. Upon completion of the work the Engineer shall determine:

- (a) The amount which would have been due to the Contractor under the Contract if all of the work had been performed by Contractor; and
- (b) The costs and expense borne by the Owner in completing the work and damages for delay in completion, if any.

18.6. The Contractor shall be entitled to receive the balance of the Contract Price less such costs and expense, or if such costs and expense exceed such price, the Contractor shall pay the amount of such excess to the Owner on demand.

18.7. The Owner shall have the option, under the provisions of this Article, to be exercised in its absolute discretion, to terminate the right of the Contractor to perform any part or parts of the work and to permit the Contractor to continue to perform the rest of the work. All the provisions of this Article shall apply to such part or parts with such modifications as the circumstances may require.

## 19. CONTRACTOR'S TERMINATION OF THE CONTRACT

19.1. The Contractor shall have the right to terminate the Contract for any of the following reasons:

- (a) In the event of any order of any court or other public authority, other than the Owner, causing the work to be stopped or suspended, and when the period of such stoppage or suspension exceeds NINETY (90) CALENDAR DAYS, and when such stoppage or suspension occurs through no act or fault of the Contractor, Contractor's agents, or Contractor's servants; or
- (b) In the event that the Owner fails to pay, except as provided in the Contract Documents, any sum certified by the Engineer within TWENTY (20) CALENDAR DAYS from the due date of payment, and fails to remedy such default within TEN (10) CALENDAR DAYS of the Contractor's written notice to do so.

19.2. In either event, the Contractor will receive from the Owner payment for all work performed and losses sustained in respect of any materials. For termination under (a) above, the Owner will not be liable for any such loss of anticipated profits, damages, or expenses incurred by the Contractor as a result of such stoppage or suspension, but under (b) above, the Contractor will be paid for loss of profits, damages and expenses. Such termination shall be effective upon the Contractor giving notice thereof.

19.3. The amount due to the Contractor for work performed and losses sustained shall be determined by the Engineer and certified by Engineer to the Contractor and to the Owner.

## 20. SEPARATE CONTRACTS

20.1. The Owner reserves the right to let other contracts in connection with the work. The Contractor shall afford other contractors reasonable opportunity for the introduction and storage of their materials and the execution of their work and shall properly connect and coordinate Contractor's work with theirs.

20.2. If any of the Contractor's work, as specified herein and shown on the drawings, depends upon the work of any other contractor, the Contractor shall inspect and measure the work in

place and determine whether anything in such work renders it unsuitable for proper execution of Contractor's work. Contractor shall promptly report the results of such inspection and measurement to the Engineer if anything in such work renders it unsuitable for proper execution of Contractor's work. Contractor's failure to inspect and report promptly shall constitute an acceptance of the other contractor's work and Contractor shall have no claim against the Owner by reason of anything in such work rendering the same unsuitable for proper execution of Contractor's work.

## 21. SUBCONTRACTS

21.1. The subcontractors named in the Tender Form, and others as may be approved by the Engineer following execution of the Contract, shall not be changed nor shall additional subcontractors be employed except with the written approval of the Engineer. The Contractor is responsible to the Owner for the acts and omissions of Contractor's subcontractors and of their employees, to the same extent that Contractor is responsible for the acts or omissions of persons employed by Contractor. Nothing in the Contract Documents shall create any contractual relation between any subcontractor and the Owner. The Contractor shall bind every subcontractor to the terms of the Contract Documents.

21.2. The subcontracts shall contain a provision that the Certificate of Completion of the work by the subcontractor shall be binding on the Contractor and the subcontractor.

## 22. ORAL AGREEMENTS

No oral instruction, objection, claim, or notice by any party to the other shall affect or modify any of the terms or obligations contained in any of the Contract Documents, and none of the provisions of the Contract Documents shall be held to be waived or modified by reason of any act whatsoever, other than by a waiver or modification thereof in writing and agreed to by the parties to the Contract.

## 23. NON-WAIVER

23.1. Any failure by the Owner or the Engineer at any time, or from time to time, to enforce or require the strict keeping and performance of any of the terms or conditions of the Contract will not constitute a waiver of such terms or conditions and will not affect or impair such terms or conditions in any way or the right of the Owner or the Engineer at any time to avail itself or themselves of such remedies as it or they may have for any breach of such terms or conditions.

23.2. No provision in the Contract which imposes or may be deemed to impose extra or specific responsibilities or liabilities on the Contractor shall restrict the general or other responsibilities or liabilities of the Contractor in any way.

## 24. MATERIALS BY CONTRACTOR

24.1. The Contractor shall supply all materials unless it is expressly specified to the contrary. Materials used in the work shall meet the requirements of the specifications, or where not

detailed in the specifications, shall be to the Engineer's satisfaction. Unless otherwise specified, all materials shall be new.

24.2. Unless otherwise specified, the Contractor shall provide all water, light, power, heating and equipment necessary for the execution of the work.

24.3. All materials provided by the Contractor in order to complete the work shall vest in and become the property of the Owner as soon as the same are delivered to the site of the works, but shall remain in the custody and at the risk of the Contractor.

## 25. MATERIALS BY OWNER

25.1. The Owner will provide only such materials as are specifically listed as being supplied by the Owner.

25.2. The materials to be provided by the Owner are as follows:

- a. Shot Rock
- b. Clay for Cell 4 Liner construction located in Clay Stockpile #1 or Clay Stockpile #2.
- c. Precast Concrete Materials. Contractor to verify dimensions and the suitability of these materials and ensure that they meet the Design Specification. If these materials do not meet the specification, then the Contractor shall not use the materials and the Contractor shall ensure their Tender includes all the materials required. Precast materials available for use by the Contractor for Cell 4 construction located at the Hartland Landfill include:
  - i) Four (4) perforated concrete 1500mm o.d. dia x 900 mm drywell barrels.
  - ii) One (1) perforated concrete 1500mm o.d. dia x 900 mm drywell barrels with base
  - iii) Two (2) concrete barrel 1500mm o.d. dia lids.
  - iv) Three (3) concrete risers barrels (1500mm o.d. dia x 600mm)
  - v) Six (6) concrete risers barrels (1500mm o.d. dia x 1200mm)

## 26. MATERIALS STORAGE

The Contractor, at Contractor's own cost, shall store all materials provided for the work either by itself or the Owner until they have been incorporated into the completed works. Materials shall be stored so as to ensure the preservation of their quality and fitness for the work, and shall be protected from vandalism and theft. Stored materials shall be located so as to facilitate prompt inspection. Faulty materials shall not be stored on the site, and any material in storage found to be faulty shall promptly be removed from the site by the Contractor.

To minimize price escalation risk for the Contractor, the Owner will approve pre-purchasing all geosynthetic materials including GCL, HDPE geomembrane, geotextiles and pipe. The Contractor will be authorized to progress draw the cost of purchasing these materials when they are delivered to site or to a designated supplier storage area located in Victoria or the Lower Mainland.

## 27. TESTING, REJECTED WORK AND MATERIALS

- 27.1. If, in the opinion of the Engineer, testing is required, the Engineer will arrange for a testing firm to carry out tests to determine whether the applicable standards and specifications have been met. Where initial testing indicates inadequacies additional testing may be required by the Engineer.
- 27.2. The Contractor as directed by the Engineer shall supply specimens or samples for testing.
- 27.3. All materials which do not conform to the requirements of the Contract Documents, are not approved by the Engineer, or are in any way unsatisfactory or unsuited to the purpose for which they are intended, will be rejected. Any defective work, whatever the cause thereof, and without limiting the generality of the foregoing, whether the result of poor workmanship or use of defective materials, shall be removed within FIVE (5) CALENDAR DAYS after written notice is given by the Engineer, and the work shall be re-executed by the Contractor. The fact that the Engineer may have previously overlooked such defective work shall not constitute an acceptance. The removal of work and the re-execution thereof shall be at the expense of the Contractor, and Contractor shall pay the cost of replacing the work which shall include materials of other contractors destroyed or damaged by the removal of the rejected work or materials and the subsequent replacement with acceptable work. The Contractor shall also reimburse the Owner for initial testing and any additional engineering, inspection, testing or other contractor's costs incurred in respect of rejected work or materials, whether such work or materials are replaced or not or are accepted at a lower price.
- 27.4. If, in the opinion of the Engineer, it is not expedient to re-execute defective work the Owner may deduct from the Contract Price, the difference in value between the work as done and that called for by the Contract, the amount of which shall be determined by the Engineer.

## 28. OWNER'S RIGHT TO CORRECT DEFICIENCIES

Upon failure of the Contractor to perform the work in accordance with the Contract, the Owner may, without notice and without prejudice to any other remedy Owner may have, correct such deficiencies. The cost of work performed by the Owner in correcting deficiencies shall be paid by the Contractor or may be deducted from monies payable to the Contractor.

## 29. PERSONNEL

All workers must have sufficient knowledge, skill, and experience to perform properly the work assigned to them. Any foreman or worker employed by the Contractor or subcontractor who, in the opinion of the Engineer, does not perform work in a skilful manner, or appears to be incompetent or to act in a disorderly or intemperate manner shall, at the written request of the Engineer, be removed from the site of the work immediately and shall not be employed again in any portion of the work without the approval of the Engineer.

## 30. GUARANTEE PERIOD

- 30.1. Neither the Notice of Acceptance nor a Notice of Partial Acceptance, as described in Articles 50 and 51, nor any payment by the Owner shall relieve the Contractor of responsibility for faulty materials or defective workmanship. The Contractor guarantees to maintain the work against any defects arising from faulty installation, faulty materials supplied under the Contract or faulty workmanship which may appear within One (1) year of the date of Substantial Completion contained in the Certificate of Completion. If a Notice of Partial Acceptance has been issued, the guarantee period shall begin from the date of such certificate except for the work still to be performed and the defects and deficiencies still to be corrected which are listed on such certificate. Faulty materials shall be replaced and defects discovered and failures which occur during the guarantee period shall be rectified to the satisfaction of the Engineer and in accordance with the Contract Documents, including, if deemed necessary by the Engineer, replacement of all or a portion of the work. The same guarantee as is herein provided and for the same period shall attach to such replacement materials or rectified work and the period shall begin on the date the Engineer accepts such replacement material or rectified work.
- 30.2. If the Owner observes through use of the works, or if it is discovered by tests or inspection of the works prior to the end of the guarantee period, that a deficiency or defect exists in the materials or workmanship in respect to the works, the Owner shall immediately notify the Contractor, by whatever means are available, of the defect or deficiency and instruct Contractor to rectify the fault. Such notification shall be confirmed by the Owner in writing to the Contractor. In the event that this work, in the opinion of the Owner, must be done immediately to prevent serious damage, injury, or loss of life, the Owner may perform, or cause to be performed, the necessary work, and shall notify the Contractor accordingly. Work required under guarantee shall, except as otherwise provided herein for emergencies, be carried out by the Contractor or its representative within TEN (10) CALENDAR DAYS of the Owner's written instruction to perform the work. In the event that this work is not done by the Contractor within the TEN (10) CALENDAR DAY period, or such further period as may be approved by the Engineer, the Owner may take whatever action is necessary to have the work done.
- 30.3. All costs relating from the necessity to do work under the guarantee requirement, whether it be done by the Contractor, its representative, or the Owner, as provided herein, shall be borne by the Contractor. The Contractor shall, in addition, be liable to the Owner for all expenses, losses, or damages incurred by the Owner as a result of faulty materials and defective workmanship as are referred to in the first paragraph of Article 30, or as a result of the Contractor's failure to meet the guarantee requirements as specified herein, including, but without limiting the generality hereof, all costs of engineering, inspection and testing. All costs may be deducted by the Owner from the guarantee amount as described herein.
- 30.4. In addition to the provisions of the Performance Bond, the Contractor shall, prior to issuance of the Certificate of Completion or the Notice of Partial Acceptance, deposit with the Owner a Standby Irrevocable Commercial Letter of Credit in the amount of TWENTY THOUSAND DOLLARS (\$20,000), to be drawn on a local bank, that may be used by the Owner for the rectification of defects or deficiencies for ONE (1) YEAR from the Certificate of Completion.

30.5. The Form of the Letter of Credit (for Guarantee Period) shall be as laid out herein:

LETTER OF CREDIT  
[Applicable to Contract Guarantee Period]

Letter of Credit No: \_\_\_\_\_ Amount: \_\_\_\_\_

TO: The Capital Regional District  
ADDRESS: 625 Fisgard Street, PO Box 1000  
Victoria, BC V8W 2S6

WE HEREBY AUTHORIZE YOU TO DRAW ON THE (name and address of bank) for the account of (name of Contractor) UP TO AN AGGREGATE AMOUNT OF (dollars in writing and in numbers) available on demand.

PURSUANT TO THE REQUEST OF our customer: (name of Contractor) we the (name of bank) hereby establish our Irrevocable Commercial Letter of Credit in your favour in the above amount which may be drawn on by you at any time and from time to time, upon written demand for payment made upon us by you, which demand we shall honour without enquiring whether you have the right as between yourself and the said customer to make such demand, and without recognizing any claim of our said customer, or objection by it to payment by us.

THE LETTER OF CREDIT we understand relates to those services and financial obligations set out in an Agreement between the customer and the Capital Regional District and referred to as (name and number of Contract).

THE AMOUNT of this Letter of Credit may be reduced from time to time as advised by notice in writing to the undersigned from time to time by the Capital Regional District.

THIS LETTER OF CREDIT will continue in force for a period of 1 year.

DATED at \_\_\_\_\_, British Columbia, this \_ day of \_\_\_\_\_, 20\_\_\_\_.

COUNTERSIGNED BY: \_\_\_\_\_  
(name of bank)  
Per: \_\_\_\_\_  
\_\_\_\_\_

The issuance of a Certificate of Completion in relation to a subcontract shall not relieve the Contractor of Contractor's obligation under this Article 30 - Guarantee Period.

### 31. WORKERS' COMPENSATION INSURANCE

- 31.1. Prior to commencing the work and prior to receiving payment on completion of the work, the Contractor shall provide evidence of compliance with the requirements of the *Workers' Compensation Act*, including payments due thereunder.
- 31.2. At any time during the term of the Contract, when requested by the Owner, the Contractor shall provide such evidence of compliance by Contractor and its subcontractors.

### 32. DAMAGE TO WORK

The Contractor shall be responsible for all loss and damage whatsoever which may occur on or to the works, completed or otherwise, until such time as the entire works have been completed and the Notice of Acceptance has been issued by the Owner. In the event of any loss or damage occurring, the Contractor shall, on notice from the Engineer, immediately put the works into the condition it was immediately prior to such loss or damage all at the Contractor's expense, except where such loss or damage was caused solely by an act of the Owner.

### 33. INDEMNITY

The Contractor shall release, save harmless and indemnify the Owner and its directors, officers and employees, servants, agents, and the Engineer from and against all claims, actions, costs, expenses, judgements, damages, fines and fees of whatever kind, including solicitors' fees on a solicitor and own client basis, which the Owner or any other person, partnership or corporation may have or incur and which arises out of or in connection with any act or omission or alleged act or omission of the Contractor, Contractor's agents, employees or subcontractors in the execution of the Work and otherwise in the performance of or failure to perform the Contract.

### 34. BONDS

- 34.1. To ensure the faithful execution and proper fulfilment of this Contract, the Contractor shall provide the Owner with the following bonds at the time of Contractor's execution of the Contract:
- (a) Performance Bond in the amount of fifty percent (50%) of the Total Tendered Amount covering the faithful performance of the Contract and maintenance of the Contract for TWO (2) YEARS after the Notice of Acceptance; and
  - (b) Labour and Materials Payment Bond in the amount of fifty percent (50%) of the Total Tendered Amount.
- 34.2. The above bonds must be issued by a surety company licensed to conduct business in the Province of British Columbia and shall be provided on the forms contained within the Contract Documents, or on accepted alternative forms.

- 34.3. Notwithstanding anything contained elsewhere in the Contract Documents, the Owner shall not be required to make any payment whatever to the Contractor until the above bonds, duly executed, have been delivered to the Owner.

### 35. PATENTS AND ROYALTIES

The Contractor shall pay all royalties and licence fees with respect to and shall assume the defence of and indemnify the Owner and the Engineer, their employees, officers and agents from all claims relating to inventions, copyrights, trademarks, or patents used in doing the work and in the subsequent use and operation of the work or any part thereof upon completion. The Contractor shall not be liable hereunder with respect to any claims arising from a construction method, process or equipment specified by the Owner in the documents submitted to the Contractor before Contractor submitted its tender.

### 36. PERMITS AND REGULATIONS

- 36.1. The Contractor shall, at Contractor's own expense, procure all permits, certificates and licences required for the construction of the work and shall comply with all federal, provincial, and local laws, regulations and by-laws affecting the execution of the work, save insofar as the Contract Documents specifically provide otherwise.

- 36.2. The Owner will obtain all necessary governmental approvals for the design of the completed work, and all permits and licences required by law for the completed works.

### 37. SAFETY REQUIREMENTS

By agreeing to be the designated Prime Contractor, the Contractor agrees to the following:

- 37.1. The Contractor is the Prime Contractor as defined in Part 3 of the *Workers' Compensation Act* of the Province of British Columbia and shall note this fact on the Notice of Project submitted to WorkSafeBC. A copy of the Notice of Project will be posted on site and another delivered to the Engineer.
- 37.2. Notwithstanding the above, the Owner may from time to time assign the responsibilities of Prime Contractor to another contractor in writing. When a contractor has been assigned the obligations of Prime Contractor, the contractor will become the Prime Contractor and will be required to comply with all of the regulatory requirements for Prime Contractor. Compensation for performing the requirements of Prime Contractor will only be considered when the Owner did not previously disclose these obligations.
- 37.3. The Contractor shall comply with the provisions and amendments thereto of the *Workers' Compensation Act* of the Province of British Columbia, the WorkSafeBC Occupational Health and Safety Regulation and all other applicable federal, provincial, regional and municipal laws, Owner's policies and procedures, ordinances, codes and regulations. Where any of these are in conflict the more stringent shall be followed.

- 37.4. The Contractor is responsible to assess the scope of work, project site and surrounding environment and determine if hazards exist.
- 37.5. Refer to Appendix A for Owner's declaration of known hazards associated with the property.
- 37.6. The Contractor is responsible for all functions related to the coordination of the health and safety activities at the job site in accordance with the *Workers' Compensation Act* and WorkSafeBC Occupational Health and Safety Regulation and the amendments thereto. This requirement shall apply during the Contract period and not be limited to normal working hours.
- 37.7. Throughout the duration of the project the Contractor will ensure that all workers on site are complying with *Workers' Compensation Act* and WorkSafeBC Occupational Health and Safety Regulation. This will include periodic inspections of the workplace and follow through with documentation of actions taken.
- 37.8. The Contractor will post at the site the name of the qualified Workplace Safety Coordinator, a site drawing showing the boundaries of the Prime Contractor's area of responsibility, with project layout, first aid location, emergency transportation provisions and the evacuation marshalling points.
- 37.9. The Contractor shall prepare a site-specific safety management plan for approval by the Owner. The site-specific safety management plan and any other health and safety requirements requested by the Owner, unless otherwise approved by the Owner, shall be submitted not later than FOURTEEN (14) CALENDAR DAYS after the date of the Notice of Award and shall be approved by the Owner, if satisfactory to the Owner, prior to the issuance of the Notice to Proceed. If unsatisfactory, the Contractor shall update the plan and resubmit accordingly.
- 37.10. The Contractor will ensure a copy of the site-specific safety management plan, safety program, written procedures designed to protect the health and safety of workers at the site and the *Workers' Compensation Act* and WorkSafeBC Occupational Health and Safety Regulation are available on site.
- 37.11. The Contractor will ensure that the person who is appointed as the Workplace Safety Coordinator is qualified, by reason of a combination of training, education and experience to perform the required duties effectively.
- 37.12. When conditions or activities on the site affect the workers of more than one employer, or where there are overlapping or adjoining work activities by two or more employers, the Contractor will ensure that the Workplace Safety Coordinator coordinates the occupational health and safety activities at the site.
- 37.13. The Contractor will alert all workers to all reasonably foreseeable hazards to which they are likely to be exposed.

- 37.14. The Contractor will hold meetings as often as necessary with the other contractors on the site to discuss hazards, overlapping work, scheduling, work sequencing and the controls that are in place to reduce the risk to workers.
- 37.15. The Contractor will conduct daily Field Level Hazard Assessments and hold daily tailgate meetings with all workers to alert them to the sequence of work and the hazards being created by the work. Accidents and near misses will be discussed as well as the procedures in place to reduce the risk to workers.
- 37.16. The Workplace Safety Coordinator will conduct weekly safety inspections to ensure all contractors are meeting their contractual obligations and not allowing unsafe conditions to develop.
- 37.17. In an emergency affecting the safety of life, or of the works, or of adjoining property, the Contractor, without the necessity of authorization from the Engineer, shall act in a responsible manner to prevent loss or injury.
- 37.18. The Contractor shall satisfy the Engineer that a jobsite specific construction safety program has been developed in accordance with the WorkSafeBC Occupational Health and Safety Regulation, and safe work practices and procedures of WorkSafeBC, and shall incorporate all of the Owner's site requirements and restrictions. The Contractor to complete and provide to the Engineer a project Risk Assessment using a Risk Matrix that is based on Safety Critical Tasks. Safety Critical Tasks are tasks performed on a safety-critical elements which, if performed incorrectly due to lack of technical skills or knowledge or due to behavior attributes, can lead to a major accident hazard.
- 37.19. The Contractor shall provide the Engineer, prior to commencement of the work, the Safety Data Sheets and site specific precautions for the application of all controlled chemical products including any products that require local or general ventilation control.
- 37.20. The Contractor shall, without further order, provide and maintain at all times during the progress or suspension of the work, suitable barricades, fences, signs, signal lights and traffic control persons as are necessary to ensure the safety of the public and those engaged in the work. All work shall be carried out in a manner that will cause the least interruption to vehicular and pedestrian traffic and access to commercial and other private property and the Contractor shall, without further order, provide and maintain at all times during the progress or suspension of work, signs as are necessary to advise the public of access to commercial property.
- 37.21. Where work requiring the use of cranes or large equipment is to be carried out and the limits of approach to power lines could be violated, the Contractor shall prepare and submit to the Engineer, prior to starting the work, a detailed written work procedure prepared in consultation with the site foreman and superintendent.
- 37.22. Work in confined spaces will be performed in accordance with the WorkSafeBC Occupational Health and Safety Regulation. Prior to commencement of work, the Contractor

shall submit a copy of their confined space entry program including written confirmation of training and instruction of confined space personnel.

37.23. Any notice of violation issued to the Contractor, Sub-contractor, other worksite employer or worker by the Workers' Compensation Board for non-compliance of WorkSafeBC Occupational Health and Safety Regulations shall be considered a breach of Contract and may result in termination or suspension of the Contract and/or any other actions deemed appropriate, all at the discretion of the Owner.

37.24. Level 2 first aid services are provided by the Owner during the hours of 6:30 a.m. to 5:30 p.m., Monday to Friday and 7:00 a.m. to 3:30 p.m., Saturdays. In all cases, the Contractor shall provide the means of summoning first aid services to their respective places of work. If the Contractor is permitted to work outside the normal working hours, the provision of first aid services shall be the responsibility of the Contractor and must conform to the first aid section of the WorkSafeBC Occupational Health and Safety Regulation for high risk workplaces.

### 38. EMERGENCIES

The Engineer has authority in an emergency to stop the progress of the work whenever in Engineer's opinion such stoppage may be necessary to ensure the safety of life, or the work, or neighbouring property. This includes authority to make changes in the work, and to order, assess and award the cost of such work, extra to the Contract or otherwise, as may in Engineer's opinion be necessary. The Engineer shall within TWO (2) WORKING DAYS confirm in writing any such instructions. In such a case if work has been performed under direct order of the Engineer, the Contractor shall keep Contractor's right to claim the value of such work.

### 39. NOTICE TO PROCEED

39.1. Following the execution of the Contract by the Contractor and the provisions of the required bonds and insurance policies, a written Notice to Proceed with the work will be given to the Contractor by the Owner. The Contractor shall begin work within FOURTEEN (14) CALENDAR DAYS following receipt of the Notice to Proceed and shall prosecute the work regularly and without interruption thereafter, unless otherwise directed in writing by the Engineer or Owner, in such a manner as to secure completion of the work within the time stated in the Contract. Time shall be of the essence of the Contract.

39.2. If, however, when the Notice to Proceed is given, a strike or lockout affecting workers of a classification required to organize or begin performance of the work reasonably prevents the Contractor from beginning work promptly, the completion date stated in the Contract will be extended by the same number of WORKING DAYS as the strike or lockout. If the strike or lockout affects workers of several classifications and such strike or lockout ends on different dates, the end of the strike or lockout will be deemed to occur when all workers of a classification required to organize or begin performance of the work are permitted to work for the Contractor. No extension of time herein provided, shall be grounds for any claim whatsoever by the Contractor for extra payment.

39.3. If when the Notice to Proceed is given, the Contractor believes that a Disease or Disease-Related Reason prevents the Contractor from beginning work promptly, the Contractor shall provide any and all evidence that the Engineer in its sole discretion believes is necessary to determine that the delay is directly related to a Disease or Disease-Related Reason, including but not limited to evidence related to availability of staff, availability of materials, availability of work by others, and such other information and documents requested by the Engineer. If after reviewing the evidence the Engineer determines that a Disease or Disease-Related Reason prevents the Contractor from beginning the work promptly, the Engineer may recommend in writing to the Owner that the completion date stated in the Contract be extended by the same number of WORKING DAYS as the delay. The Owner may then extend the completion date to reflect the Engineer's determination. No extension of time herein provided, shall be grounds for any claim whatsoever by the Contractor for extra payment. If after reviewing the evidence the Engineer determines that the Contractor is not prevented from beginning the work promptly, or if the Owner determines not to extend the completion date, the Contractor shall begin the work within FOURTEEN (14) CALENDAR DAYS following receipt of the Notice to Proceed, as per section 39.1.

#### 40. FAILURE TO COMPLETE ON TIME

40.1. If the Contractor fails to complete the work within the time required by the Contract Documents, the Owner, in addition to any other rights and remedies Owner may have, shall be entitled to deduct from any payments due to the Contractor the daily amount stipulated in the Tender Form as liquidated damages.

40.2. No bonus will be allowed by the Owner for completion of the works in less time than specified in the Contract.

#### 41. SCHEDULE OF COMPLETION

41.1. The Contractor shall prepare a detailed work schedule and plan of operation for approval by the Engineer. The work schedule and plan of operation, unless otherwise approved by the Engineer, shall be submitted to the Engineer not later than FOURTEEN (14) CALENDAR DAYS after the date of the Notice of Award and shall be approved by the Engineer prior to the issuance of the Notice to Proceed. Upon receipt and approval of such work schedule and plan of operation by the Engineer, the schedule shall become the approved construction schedule. Neither the plan of operation nor the approved construction schedule shall be changed without the prior written approval of the Engineer.

41.2. The work schedule and plan of operation shall describe the proposed labour force and equipment, sequence and methods of operation, restraints, delivery windows, shop drawing submittal and review times, activities on the critical path, project float time, milestones and projected weekly progress to show completion of all work within the Contract time beginning with the date of Notice to Proceed and concluding with the date of Substantial Completion. The schedule shall be based on a standard 5-day, 40-hour work week and shall be provided in bar-chart form, on maximum 11 inch by 17 inch size paper, and in digital form on a USB

stick or CD using an approved project planner software package. The float time shown is a project resource available to both parties to meet milestones and the Contract time for completion. Pursuant to the float-sharing requirement, no time extensions will be granted nor delay damages paid until a delay occurs that (i) impacts the project's critical path, (ii) consumes available float or contingency time, and (iii) extends the work beyond the Contract completion date. The schedule requirement herein is the minimum required. The Contractor may prepare a more sophisticated schedule if such will aid in the execution and timely completion of the Work.

- 41.3. If the Engineer should be of the opinion, and so state in writing to the Contractor, that the rate of progress of the work is insufficient to enable the whole of the work or any part or parts thereof to be completed within the time specified for such completion in the approved construction schedule, the Contractor shall take whatever steps the Engineer may in Engineer's absolute discretion specify in writing to the Contractor to expedite the progress of the work. Such steps may include, but shall not be limited to adoption of shift work and/or the provision of additional workers or equipment. The Contractor shall not be entitled to any extra payment by reason of such order of the Engineer.
- 41.4. The contractor shall maintain the schedule of completion and prior to receiving payments on each progress certificate, except on the first one, and provide to the owner an update on schedule completion.

## 42. CHANGES IN THE WORK

- 42.1. The Owner, without invalidating the Contract, may make changes by altering, adding to, or deducting from the work. The Contractor shall proceed with the work as changed and the work shall be executed under the provisions of the Contract. No change shall be undertaken by the Contractor, without written order of the Engineer, except in an emergency endangering life or property, as described in Article 38, and no claims for additional compensation shall be valid unless the change was so ordered. No payment for extra work or changes in any contract will be entertained by the Owner unless a "Change Order" form is completed and signed by the Engineer and Contractor.
- 42.2. If, in the opinion of the Engineer, such changes affect the time of Contract completion or the Contract amount, these will be adjusted at the time of ordering the changes. The value of the addition or deduction from the Contract amount, and the method of determining such value, shall be decided by the Engineer. The Engineer will use one (1) or more of the following methods in deciding such value:
- (a) By unit prices or combinations of unit prices in the Tender Form;
  - (b) By unit prices submitted by the Contractor and accepted by the Owner;
  - (c) By lump sum submitted by the Contractor and accepted by the Owner; or

(d) On a force account basis as specified in Article 43.

42.3. If the Contractor and the Owner cannot agree on the method of determining such value, the Engineer shall decide and certify the unit prices or lump sum to be used which are or is in Engineer's opinion fair and reasonable to both parties and Engineer's decision shall be final, subject only to Article 58.

#### 43. FORCE ACCOUNT WORK

Compensation for work done on a force account basis shall be made as follows:

- (a) Force account rates for personnel and equipment as specified in the Tender Form will form the basis of payment to the Contractor. Where personnel and equipment are not listed on the Tender Form and rates are not agreed to by the Owner in writing in advance of the work commencing, no payment shall be owing for such personnel and equipment and no claims may be made in relation to provision of same. All tendered force account rates shall include a maximum of ten percent (10%) mark-up on costs for all overhead incurred in relation to the work and a maximum of ten percent (10%) mark-up on actual costs for profit.
- (b) Materials incorporated into the Work by the Contractor provided by the Contractor shall be at the Contractor's actual cost, as evidenced by invoice, including all transportation, freight and haulage costs plus a markup of ten percent (10%) on such actual cost to cover all overhead, handling (including materials unloading and delivery FOB destination) and profit. Where the Contractor uses materials from its own stock, Contractor and Owner shall agree on the price in advance of use. The Contractor shall not use materials from its own stock in advance of agreement. Where materials are provided by the Owner, no additional costs, overhead, profit, or markup shall be payable.
- (c) Force account work performed by a sub-contractor shall be paid at the force account rates specified in the Tender Form. Where a sub-contractor's personnel and equipment are not listed on the Tender Form and rates are not agreed to by the Owner in writing in advance of the work commencing, no payment shall be owing for such personnel and equipment and no claims may be made in relation to provision of same. All material incorporated into the work by the sub-contractor and provided by the sub-contractor shall be at the sub-contractor's actual cost, as evidenced by invoice, including all transportation, freight and hauling costs plus a ten percent (10%) markup on such actual cost to cover all overhead, handling (including materials unloading and delivery FOB destination) and profit. The Contractor, upon submission of the sub-contractor's costs, shall be permitted to add five percent (5%) to materials costs submitted by the sub-contractor to cover all overhead, handling and profit. Where the sub-contractor uses materials from its own stock, Contractor and Owner shall agree on the price in advance of use. The sub-contractor shall not use materials from its own stock in advance of agreement. Where materials are provided by the Owner or the Contractor to the sub-contractor, no additional costs, overhead, profit, or markup shall be payable.

- (d) The cost of the work done each day shall be submitted to the Engineer by the Contractor in a satisfactory form on each succeeding day after force account work is carried out and shall be approved or adjusted by the Engineer. Records shall show labour and equipment by class on a shift-by-shift basis, as well as quantity of materials incorporated into the work. Where one individual is performing multiple classes of work or trades, that individual's work shall clearly identify what work is occurring. No claim for compensation for extra work or materials shall be considered or allowed unless such report shall have been made or the Engineer shall have extended the time for such reports or released the Contractor therefrom. For clarity, submission of the forms is a necessary condition for any entitlement to payment: a failure to submit forms releases and forever discharges the Owner from any and all claims in law or equity of any kind arising or related to the force account work claimed by the Contractor or subcontractor. The submission to, or acceptance or approval by, the Engineer of daily force account cost records shall not at any time be deemed to be an admission that the work is properly chargeable to force account. Where a dispute arises relating to work done on force account, the Contractor shall cease work on the force account work until the dispute can be resolved with the Engineer. The Contractor shall keep reasonable records substantiating its labour, equipment, materials and other costs and expenses as well as work performed and provide access to such records on reasonable demand of the Engineer.
- (e) Where in the opinion of the Engineer, force account work can be done in conjunction with the Work without a schedule delay, no additional live-out allowances for personnel shall be paid, unless additional personnel are necessary for the work done on force account and are reasonably required to live-out.
- (f) No stand-by rates for labour or equipment used for the Work or the work done on force account shall be payable where the Work can be performed, in the opinion of the Engineer, without delay to the Work caused or attributable to the work done on force account. The Owner shall not pay for equipment that is inoperable due to breakdown; if the Contractor suspends work; or if the Contractor is maintaining or repairing the equipment.
- (g) The Owner will not pay rental or other charges for tools or equipment with a replacement value of \$500 or less, unless otherwise agreed in writing.
- (h) In completion of the work done based on force account, the Contractor shall take all reasonable efforts to minimize the effects and cost of the work. If in the opinion of the Engineer, the Contractor is using an unsuitable methodology or operating in a way that will not comply with the project schedule, the Contractor will be immediately advised that work based on force account is to cease until the Contractor has presented an acceptable methodology or provided an updated and sufficient project schedule capable of completing the work to the satisfaction of the Engineer.

- (i) No compensation is payable for any labour or personnel connected with the Contractor's forces above the classification of foreman and having only general supervisory responsibility for the force account work unless agreed to in writing in advance.
- (j) No compensation is payable by the Owner to the Contractor or subcontractor for profit in excess of that specified in 43(a), (b) and (c); loss of anticipated profit; home office overhead; consequential damages, including loss of bonding capacity, loss of bidding opportunities, or insolvency; indirect costs; legal fees, claims preparation expenses, or costs of litigation; or interest.
- (k) Where the work done on force account results in any product, goods, materials or wastes with salvage value, or where the Owner is charged for any tool or equipment necessary to conduct the work meant to be retained by the Contractor or Subcontractor, the Contractor shall provide the Owner with a credit for the salvage value, as determined by the Engineer acting reasonably, unless otherwise agreed.
- (l) Neither the Contractor nor any subcontractor shall do any work payable on force account without prior written direction of the Engineer.
- (m) At the conclusion of the work done on force account, or, at the Engineer's option with each invoice claiming payment for work done on force account, the Engineer shall review the daily work forms under Article 43(d) and invoices submitted by the Contractor to determine entitlement to payment. Work done on force account that is not disputed may be included in any progress payments. Work that is disputed that either the work forms under Article 43(d) have not been submitted for or where the Contractor is not entitled and the consent of the Engineer to the rates, materials, or work was not given in writing in advance shall be disallowed and there shall be no entitlement to payment and no claim against the Owner for such payment.

#### 44. EXTENSION OF CONTRACT TIME

44.1. The time for completion of the work under the Contract may be extended by the Owner in the event of one (1) or more of the following:

- (a) Where extra work as herein provided is added to the work under this Contract;
- (b) Where the work is suspended as provided for in Article 17;
- (c) Where the work is delayed on account of conditions which could not have been foreseen or which were beyond the control of the Contractor (other than a Disease or Disease-Related Reason) and which were not the result of the fault or negligence of the Contractor, its agents, or employees, provided, however, rain, wind, flood, or other natural phenomena of normal intensity for the area shall not be construed as cause for an extension of time for completion of the work;

- (d) Where the work is delayed on account of a Disease or Disease-Related Reason;
- (e) Where delay occurs in the progress of the work as a result of the act or neglect of the Owner or its employees, or by other contractors employed by the Owner;
- (f) Where delay occurs as a result of an act of a public authority;
- (g) Where the Engineer causes delay in furnishing of drawings or necessary information;
- (h) Where strikes, lockouts, or labour disputes prevent or substantially interfere with the progress of the work; or
- (i) Where, in the opinion of the Engineer, the Contractor is entitled to an extension of time.

44.2. For any claim for extension of Contract time other than a claim under 44.1(d), the claim shall only be considered when submitted by the Contractor to the Engineer in writing within SEVEN (7) CALENDAR DAYS of the occurrence of the delay on which the claim is based, provided, however, that in the case of a continuing cause of delay, only one (1) claim shall be necessary. Within a reasonable period after the Contractor submits a request for an extension of time, the Engineer will present a written recommendation to the Owner stating Engineer's opinion on whether or not the delay justifies an extension of time; and, if so, the number of WORKING DAYS extension due to the Contractor. The Owner will make the final decision on all requests for extension of time.

44.3. Granting of additional time to complete the work pursuant to this Article shall not constitute grounds for any claims whatsoever for additional payment, save on the grounds set out in (b) and (e) above.

44.4. If a claim for extension of Contract time is made under section 44.1(d) such claim process is subject to the following:

44.4.1 If after the notice to proceed is given, but before the work commences, the Contractor believes that a Disease or Disease-Related Reason will affect the start date, the Contractor must declare whether Disease will affect the start date. The Contractor must make such declaration a minimum of SEVEN (7) CALENDAR DAYS prior to the commencement of the Work, unless the Contractor does not become aware of the anticipated delay during this time period, in which case the Contractor must make such declaration as soon as possible after becoming aware of the anticipated delay. If so declared, the Contractor shall provide all evidence that the Engineer in its sole discretion believes is necessary to determine that the delay is directly related to a Disease or Disease-Related Reason, including but not limited to evidence related to availability of staff, availability of materials, availability of work by others, and such other information and documents requested by the Engineer ("Sufficient Evidence").

- 44.4.2 For any and each Disease or Disease-Related delay identified after Work has commenced, the Contractor shall within SEVEN (7) CALENDAR DAYS of becoming aware of the anticipated delay declare the additional delay and shall provide Sufficient Evidence as indicated in 44.4.1.
- 44.4.3 Failure to provide Sufficient Evidence in the opinion of the Engineer or timely notice as required by 44.4.1 and 44.4.2 will result in no additional time delays for Disease being considered by the Engineer or the Owner.
- 44.4.4 Within a reasonable period after the Contractor submits a request for an extension of time because of Disease or a Disease-Related Reason, the Engineer will present a written recommendation to the Owner stating Engineer's opinion on whether or not the evidence provided by the Contractor justifies an extension of time; and, if so, the number of WORKING DAYS extension due to the Contractor. The Owner will make the final decision on all requests for extension of time. For certainty, granting of additional time to complete the work under this 44.4 shall not constitute grounds for any claims whatsoever for additional payment. However, when considering lengthy Disease or Disease Related, if the Engineer believes that temporary works are required to maintain the Work in a safe manner until the Work recommences, the Owner may require that as a condition of granting an extension of time, the Contractor must install such temporary works. If the Owner requires the Contractor to install such temporary works, the Owner shall pay to the Contractor its additional expenses relating to temporary works needed to maintain the Work in a safe manner until Work recommences, as determined by the Engineer using the process specified in 42.2.

#### 45. USE OF COMPLETED PORTIONS

The Owner will have the right to take possession of and use any completed or partially completed portions of the work, whether the time for completing the entire work or such portions has or has not expired, but such taking possession and use will not be deemed an acceptance of any work so taken possession of or used. If such prior use increases the cost of, or delays the completion of uncompleted work or causes refinishing of completed work, the Contractor shall be entitled to such extra compensation or extension of time, or both, as the Engineer may determine.

#### 46. PROGRESS PAYMENTS

- 46.1. At the end of each calendar month the Engineer will calculate all progress payments for that month and will prepare certificates for payment by the Owner. Where unit prices apply, payment will be calculated on the basis of the tendered prices and the units of work completed as determined by the Engineer. Where a lump sum price applies, payment will be calculated on the basis of the Engineer's estimate of the percentage of work completed.
- 46.2. The payment certificate shall show as of the end of the last day of each calendar month the value of all labour and materials incorporated into the works, including extras, and all adjustments previously made whether additions or deductions. The certificate shall also show the aggregate of previous payments, the amounts withheld to comply with the builder's lien legislation,

and the amount, if any, of the holdback released in respect of completed subcontracts. Except in respect of the final progress payment, the gross amount shown on such certificate, less the aggregate of all previous payments, previous sums withheld, and the amount then required to be withheld to comply with the applicable builder's lien legislation as set out below, shall become due and be payable by the Owner to the Contractor on or before the last day of the next month. In those cases where the work is such that the builder's lien legislation does not apply or does not require the retention of a holdback, the Owner will nevertheless retain holdbacks to the same extent as if such legislation applied to the work.

46.3. Ten percent (10%) of each progress payment shall be retained by the Owner to comply with the *Builders Lien Act* until payment is due in accordance with the provision of Article 54.

46.4. The monthly estimates shall not bind the Owner or Engineer in any manner in the preparation of the final estimate of the work done, but shall be construed and held to be approximate only, and shall in no case be taken as an acceptance of the work or as a release of the Contractor from Contractor's responsibility therefor.

#### 47. STATUTORY DECLARATION

The Contractor shall, prior to receiving payment on each progress certificate except the first one, provide to the Owner a Statutory Declaration, stating that "all employees, sub-contractors and suppliers used in connection with the work have been fully paid and satisfied by the Contractor, and that all fees and assessments have been paid or are in good standing, and that there is no claim outstanding or pending in respect of the work carried out and that no lien has been filed against the Owner's lands or against any materials or equipment for work done or materials supplied under the Contract."

#### 48. PAYMENT WITHHELD

48.1. Upon receipt of a certificate in writing from the Engineer stating that, in Engineer's opinion, justification exists and stating the basis and the amount of such deduction, the Owner may withhold or nullify, on written notice to the Contractor specifying the ground or grounds relied on, the whole or part of any progress payment to the extent necessary to protect itself from loss on account of one (1) or more of the following:

- (a) That the Contractor is not making satisfactory progress in the opinion of the Engineer;
- (b) That defective work is not being remedied at all or in a manner satisfactory to the Engineer;
- (c) That a claim or claims of lien has been filed against the lands and premises on which the work is done or is being done, or reasonable evidence of the probable filing of such claims or claims of lien;
- (d) That the Contractor is failing to make prompt payments as they become due to subcontractors or for material or labour; or

- (e) That there exist unsatisfied claims for damages caused by the Contractor to anyone employed on the site or in connection with the work.
- (f) That the Contractor owes a debt to the Owner under a separate contract, agreement or offer between the Owner and the Contractor which remains unpaid for more than THIRTY (30) CALENDAR DAYS from the last day of the month in which the invoice was issued.

48.2. Where subcontractors or suppliers of materials are not receiving prompt payment, the Owner may make payment to such subcontractors or suppliers directly and deduct the amount of such payments from amounts otherwise due to the Contractor.

#### 49. BUILDERS' LIENS

49.1. The Contractor shall remove or cause to be removed all claim of lien or liens filed or registered against the lands and premises on which the work is being performed which claim of lien or liens arise out of anything done or to be done under the Contract. Such removal shall be effected by the Contractor forthwith upon demand by the Owner or the Engineer.

49.2. The Owner shall release a holdback in respect of a completed subcontract if a Certificate of Completion has been issued in respect of that subcontract and the holdback period established under the *Builders Lien Act* has expired without any claims of a lien being filed that arose under that subcontract.

49.3. Notwithstanding anything elsewhere contained in the Contract Documents, the Contractor shall indemnify and hold harmless the Owner from all demands, damages, costs, losses and actions arising in any way out of claims of lien or liens which arise out of anything done or to be done under the Contract whether the lien period binding on the Contractor has expired or not.

49.4. The obligations imposed on the Contractor by the provisions of this Article 49 shall not extend to claims of lien or liens properly and lawfully filed by the Contractor itself.

#### 50. COMPLETION AND NOTICE OF ACCEPTANCE

50.1. When the Contractor is of the opinion that Contractor has substantially performed the work, Contractor shall inspect the work to ensure that all work has in fact been substantially performed, that it is in a clean and tidy condition and that it is ready for use by the Owner. Contractor should then submit a written request to the Engineer to determine whether the Contract has been substantially performed. The Engineer will make an inspection and if Engineer determines that the Contract has been substantially performed, the Engineer shall so advise the Owner and the Contractor, and a Certificate of Completion will be issued in accordance with the *Builders Lien Act*.

50.2. The Engineer will notify the Contractor in writing of any defects or deficiencies which require correction. When the defects or deficiencies have been corrected and the work is ready in all respects for acceptance by the Owner and the Contractor has submitted to the Engineer a written statement that all claims and demands of the Contractor for extra work or otherwise in connection with the Contract have been presented in writing to the Engineer, and after the Letter

of Credit has been deposited in accordance with Article 30 and after the statutory declaration required under Article 47 has been provided, the Engineer will recommend to the Owner that a Notice of Acceptance be issued to the Contractor. The Owner, subject to their acceptance of the Engineer's recommendation, will issue the Notice of Acceptance.

## 51. PARTIAL COMPLETION AND NOTICE OF PARTIAL ACCEPTANCE

- 51.1. If the Contractor considers that, by reason of climatic or similar problems beyond Contractor's reasonable control, not all the work can be performed or defects or deficiencies corrected promptly, Contractor may in writing request of the Engineer a Notice of Partial Acceptance and a determination of whether the Contract has been substantially performed to the extent possible. Such request shall be accompanied by a written statement that all claims and demands of the Contractor for extra work or otherwise in connection with the work to be accepted have been presented in writing. If the Engineer considers such request to be reasonable, Engineer will carry out an inspection and will notify the Contractor in writing of any defects or deficiencies which require correction before Engineer will recommend partial acceptance. The Engineer will prepare an additional list of defects and deficiencies which in Engineer's opinion do not impair the usefulness to the Owner of the whole work and the correction of which may reasonably be deferred. This list shall show the amount which the Engineer considers to be the cost of completing such work and correcting such defects and deficiencies.
- 51.2. When all work has been performed and defects and deficiencies corrected other than those on this list and after the Engineer determines the Contract to be substantially performed to the extent possible, the Engineer shall so advise the Owner and the Contractor, and after the Letter of Credit has been deposited in accordance with Article 30, the Engineer will recommend to the Owner that a Notice of Partial Acceptance be issued to the Contractor. The Owner, subject to their acceptance of the Engineer's recommendation, will issue the Notice of Partial Acceptance. The Notice of Partial Acceptance shall list the work to be performed and the defects and deficiencies to be corrected and the estimated cost thereof and shall fix a date within which all such works shall be performed and the defects and deficiencies corrected.
- 51.3. In considering the Engineer's recommendation, the Owner will consider the effect of the deferred performance of work on the provisions of the applicable builder's lien legislation and may make acceptance conditional on the Contractor providing written consents of sureties under any Performance or Labour and Materials Payment Bonds or other evidence that no guarantor or surety will be relieved of its obligations.
- 51.4. When all such work has been performed and the defects and deficiencies corrected, the Contractor shall call for final inspection in accordance with Article 50 - Completion and Notice of Acceptance.
- 51.5. If all work is not performed and all defects and deficiencies are not corrected by the date set out in the Notice of Partial Acceptance, the Owner shall be entitled to deduct from any payments due to the Contractor the daily amount stipulated in the Tender Form as liquidated damages. In addition, the Owner may have the work performed and the defects and deficiencies

corrected by any means the Owner thinks suitable, and may recover the costs thereof from any money withheld from the Contractor or from the Contractor if such money is insufficient.

## 52. FINAL PROGRESS PAYMENT

52.1. The final progress payment certificate will be prepared following the issuance of the Notice of Acceptance. The Engineer will review with the Contractor all work quantities and all claims and demands of the Contractor for extra work in connection with the Contract. The final progress payment certificate will show the total amount of the payment due to the Contractor less the amount required to be retained under the applicable lien legislation.

52.2. The final progress payment shall be made by the Owner within THIRTY (30) CALENDAR DAYS of the date of the final progress payment certificate.

## 53. PROGRESS PAYMENT AFTER PARTIAL COMPLETION

If the Owner issues a Notice of Partial Acceptance, the Engineer will prepare a progress payment certificate in the same detail as required for a final progress payment certificate. From the amount shown on such certificate to be due to the Contractor shall be deducted the amount required to be retained under the applicable lien legislation and twice the amount shown on the Notice of Partial Acceptance to be the estimated cost of performing the remaining work and correcting the defects and deficiencies. Payment of the net amount due to the Contractor shall be made by the Owner within THIRTY (30) CALENDAR DAYS of the date of this progress payment certificate.

## 54. RELEASE OF HOLDBACK

54.1. A Certificate of Completion shall be conclusively deemed between the Owner and the Contractor to start the period within which liens must be filed by the Contractor under the applicable lien legislation, and holdback must be released by the Owner.

54.2. The Owner shall pay the holdback to the Contractor within FOURTEEN (14) CALENDAR DAYS of the expiry of the statutory time for release of holdback, provided that:

- (a) The Contractor has provided to the Owner a certificate from the proper office to register liens to prove that, as of a date TWO (2) CALENDAR DAYS after the expiry of the statutory period, no notice of lien or liens has been filed or other matters recorded to make effective any lien;
- (b) The Contractor has complied with any conditions imposed by the Owner in Owner's acceptance of the recommendation of the Engineer to issue a Notice of Partial Acceptance;
- (c) The Workers' Compensation Board has, at the request of the Contractor, filed with the Owner a certificate that all assessments due to the Board by the Contractor have been paid, such certificate being dated after the expiry of the statutory period for filing liens;

- (d) If, under the applicable lien legislation, there is no person who can provide the certificate referred to in (a) above, in which case the Contractor shall furnish to the Owner a Statutory Declaration, dated not earlier than SEVEN (7) CALENDAR DAYS after the expiry of the statutory lien period, stating why no certificate as is referred to in (a) above is possible, and stating that all employees, subcontractors and suppliers used in connection with the work have been paid and satisfied by the Contractor and that there is no claim outstanding or pending in respect of the work carried out and no lien has been filed against the Owner's lands against any materials or equipment used in connection with the work;
- (e) The Contractor has certified to the Owner that there are no funds owing by the Owner to the Contractor other than those funds held back; and
- (f) The Contractor has provided a Standby Irrevocable Letter of Credit as stipulated in Article 30.

54.3. The statutory period within which liens must be filed is FORTY-FIVE (45) CALENDAR DAYS after the Certificate of Completion was issued, and the statutory period for the release of holdback is FIFTY-FIVE (55) CALENDAR DAYS after the Certificate of Completion was issued.

## 55. INSURANCE

Without restricting the generality of Article 33, Indemnity, the Contractor shall, at Contractor's own expense, provide and maintain the following insurance coverages listed herein unless otherwise stipulated.

Each policy shall contain a clause stating that: "This policy will not be cancelled or materially changed without the Insurer giving at least THIRTY (30) CALENDAR DAYS' notice by registered mail to the Owner."

Unless specified otherwise the duration of each insurance policy shall be from the date of Notice to Proceed until the date of the Owner's Notice of Acceptance.

Certified copies of these policies shall be filed by the Contractor with the Owner within FOURTEEN (14) CALENDAR DAYS after the date of written notification of the acceptance of Contractor's tender, and prior to commencement of the work or the supply of materials. Wherever the word "Owner" or "Engineer" is to appear in these policies, the legal name shall be inserted.

The Contractor shall be responsible for any deductible amounts under the policies. The cost of all insurance required by this Contract shall be included in the Total Tendered Amount.

If the Contractor fails to provide or maintain insurance as required by this Article 55, then the Owner shall have the right to provide and maintain such insurance and give evidence thereof to the Contractor. The cost thereof shall be payable by the Contractor to the Owner on demand or the Owner may deduct the costs thereof from monies which are due or may become due to the Contractor.

### Wrap Up Liability Insurance

Wrap Up Liability Insurance acceptable to the Owner with limits of liability of not less than THREE MILLION DOLLARS (\$3,000,000.00) inclusive, for bodily injury and property damage for any one occurrence or series of occurrences arising out of one cause and not less than THREE MILLION DOLLARS (\$3,000,000.00) for personal injury.

The insurance shall be in the joint names of the Contractor, the Owner, and the Owner's Prime Consultant (Sperling Hansen Associates), and all subcontractors. It shall include employees and directors as additional insureds.

The Wrap Up Liability Insurance shall include but not necessarily be limited to the following coverage:

- (a) Premises and operations liability;
- (b) Products and completed operations liability;
- (c) Blanket contractual liability;
- (d) Bodily injury and property damage on an "occurrence" basis;
- (e) "All Risk" property damage including the loss of use of property;
- (f) Owner's and Contractor's protective liability;
- (g) Loading and unloading of automobiles;
- (h) Operation of attached machinery;
- (i) Elevator and hoist liability;
- (j) Contingent employer's liability;
- (k) Personal injury liability arising out of false arrest, detention or imprisonment or malicious prosecution; libel, slander or defamation of character; invasion of privacy, wrongful eviction or wrongful entry;
- (l) Shoring, blasting, excavating, underpinning, demolition, pile driving and caisson work, work below ground surface, tunnelling and grading, as applicable;
- (m) Limited pollution liability arising out of hostile fire and sudden and accidental release of contaminants; and
- (n) Cross liability or severability of interest clause.

The insurance shall continue for a period of at least ONE (1) YEAR beyond the date of the Owner's Notice of Acceptance for the completed operations hazard.

#### Automobile Liability Insurance

Automobile Liability insurance in respect of licensed vehicles shall have limits of not less than THREE MILLION DOLLARS (\$3,000,000.00) inclusive per occurrence for bodily injury, death, and damage to property, in the following forms:

- (a) Standard non-owned automobile policy including standard contractual liability endorsement; and
- (b) Standard owner's form automobile policy providing third party liability and accident benefits insurance and covering licensed vehicles owned or operated by or on behalf of the Contractor.

#### Builder's Risk Course of Construction Insurance

Builder's Risk insurance acceptable to the Owner, insuring the full value of the work in the amount of the Total Tendered Amount, and full value as stated of products, if any, that are specified to be provided by the Owner for incorporation into the work.

The insurance shall be in the joint names of the Contractor, the Owner and . and the Owner's Prime Consultant (Sperling Hansen Associates), and shall include the interests of the Contractor, the Owner, the subcontractors and all others having an insurable interest in the work.

The policy shall preclude subrogation claims by the insurer against anyone insured thereunder and shall contain the following clause:

"It is agreed that the right to subrogation against the Owner and the Engineer or any of their parent, subsidiary, or affiliated companies or corporations or any employee thereof is hereby waived."

The policy shall be written to insure the work on an "All Risks" basis granting coverage at least equivalent in scope to that provided by the form known and referred to in the Insurance Industry as IAO Form 507, All Risks Builders Risk - Comprehensive Form, including flood and earthquake, subject to a deductible not exceeding FIVE THOUSAND DOLLARS (\$5,000.00) for all losses except TWENTY-FIVE THOUSAND DOLLARS (\$25,000.00) flood and TEN PERCENT (10%) earthquake.

The policy shall provide that, in the event of a loss or damage, payment shall be made to the Owner and the Contractor as their respective interests may appear. The Contractor shall act on behalf of the Owner and itself for the purpose of adjusting the amount of such loss or damage payment with the insurers. When the extent of the loss or damage is determined the Contractor shall proceed to restore the work. Loss or damage shall not affect the rights and obligations of either party under the Contract except that the Contractor shall be entitled to such reasonable extension of Contract time relative to the extent of the loss or damage as the Engineer may decide in consultation with the Contractor.

#### Contractor's Equipment Insurance

Notwithstanding anything contained elsewhere herein, it is understood and agreed that the Owner and/or Engineer will not be liable for any loss or damage to the Contractor's equipment including loss of use thereof. Each and every policy insuring the Contractor's equipment to be used on this project shall contain the following clause:

"It is agreed that the right to subrogation against the Owner and the Engineer or any of their parent, subsidiary or affiliated companies or corporations or any employee thereof is hereby waived."

#### 56. GOODS AND SERVICES TAX (GST)

Federal law states that a five percent (5%) tax be paid on all goods and services. The Contractor is required to identify this tax on all invoices and the Owner is liable to pay this amount to the Contractor.

#### 57. NORMAL HOURS OF WORK

The normal hours of work shall be a maximum of ten (10) hours per day, between the hours of 7:00 am and 5:00 pm, Monday through Friday. No work shall be done at other times or on legal holidays except to carry out such work as is necessary for the proper care and protection of the work already performed, or in case of emergency, or in special cases that the Contractor has requested in writing and the Engineer has approved in writing. Inspection personnel will be provided by the Owner between the hours of 8:00 am and 4:30 pm, Monday through Friday. If the Contractor elects to work outside these hours they must first make arrangements to do so with the Engineer. The additional cost (if any) of inspection by the Owner outside the hours of 8:00 am to 4:30 pm, Monday through Friday shall be refunded by the Contractor to the Owner.

## 58. DISPUTE RESOLUTION

### (a) Basic Process

A Dispute between the parties shall be resolved in accordance with the Dispute resolution process set out in this Article. The steps in the process must be followed in the order set out below unless both parties agree otherwise in writing:

- i) request/obtain initial decision from the Engineer under Article 6;
- ii) deliver Dispute Notice;
- iii) appoint and obtain decision of Referee;
- iv) demand Settlement Meeting;
- v) If both parties agree, proceed to arbitration; otherwise proceed to litigation.

For reference, a schematic diagram of the steps in the process is provided in Article 60. If there are any inconsistencies between the diagram and the wording of this Article then the wording of this Article prevails.

### (b) No Delay

The Contractor shall not delay the work or any portion of the work on account of any Dispute, or any proceeding taken under this Article.

In the event of a Dispute, the Engineer shall give such instructions as in the Engineer's opinion are necessary to achieve the proper performance of the work and to prevent delays. The parties shall immediately comply with such instructions. Such compliance shall be without prejudice to either party's rights under the Contract.

If it is subsequently determined that such instructions were at variance with the Contract, or constituted a change in the scope of the work, then such compliance shall be considered a change in the work under Article 42. If the Contractor intends to make a claim that such compliance is a change in the work under Article 42, then the Contractor shall prepare and submit cost records in accordance with Article 43. The Owner shall not be liable to pay for any work based on force account for which the daily force account records were not prepared and submitted under Article 43.

(c) Initial Decision of Engineer

Neither the Owner nor the Contractor shall be entitled to pursue any Dispute without first requesting an initial decision from the Engineer under Article 6.

(d) Dispute Notice

A party shall not be entitled to pursue a Dispute but shall be conclusively deemed to have accepted the decision of the Engineer rendered under Article 6 with respect to any Dispute unless, within TEN (10) WORKING DAYS after receipt of the Engineer's decision, the disputing party gives a written notice of dispute (the "Dispute Notice") to the other party and to the Engineer.

If the Contractor or the Owner is of the opinion that the Engineer has failed or refused within a reasonable time:

- i) to render a decision as required by Article 6, or
- ii) to give any other direction or instruction required by the Contract Documents,

then the disputing party may give the Engineer THREE (3) WORKING DAYS written notice to remedy the alleged failure or refusal. If at the end of the THREE (3) WORKING DAYS, the disputing party is not satisfied with the Engineer's action, then the disputing party may give a Dispute Notice and the provisions of this Article shall apply.

The Dispute Notice shall include particulars of the Dispute reasonably available to the disputing party, including any claimed adjustments to the Contract time or Total Tendered Amount, and the provisions of the Contract Documents on which the disputing party relies.

A Dispute Notice shall be given by separate written notice delivered to the other party and mention of a dispute in minutes of meetings or similar documents, even if received by the other party and the Engineer, shall not qualify as a Dispute Notice.

(e) Negotiation

The parties shall make all reasonable efforts to resolve a Dispute by amicable negotiations and shall provide frank, candid and timely disclosure of all relevant facts, information and documents to facilitate negotiations.

For the purpose of negotiating a Dispute, each of the parties shall consider appointing new representatives, where possible, who have not been directly involved in the work, although neither party shall be obligated to do so.

(f) Referee

Before proceeding further with the Dispute, including demanding a Settlement Meeting, requesting arbitration, or commencing litigation, a disputing party shall obtain a decision on the Dispute from

a Referee, appointed as set out below. The Referee's review may be omitted only with the written approval of both parties.

If a Dispute is not completely resolved by the parties through negotiations within FIVE (5) WORKING DAYS of the delivery of the Dispute Notice, then either party may initiate the appointment of a Referee in accordance with this clause if that party wishes to proceed with dispute resolution, unless the parties agree in writing to proceed to a Settlement Meeting.

The procedure for the appointment of a Referee shall be as follows:

- i) a party shall submit in writing the names of three acceptable candidates for Referee to the other party;
- ii) the parties shall, by negotiations, decide upon the identity of the Referee who need not be one of the three persons on the list submitted under I);
- iii) if the parties have not agreed upon a Referee within THREE (3) WORKING DAYS of the submission of names under I), then either party may request in writing the *Master Municipal Construction Document Committee of the Consulting Engineers of British Columbia* to appoint the Referee without further consultation and the parties shall accept the Committee's appointment. If for any reason the Committee fails to appoint a Referee within FIVE (5) WORKING DAYS of the written request, then such failure shall be deemed to be an agreement between the parties to waive the Referee process and either party may request a Settlement Meeting and proceed with the remaining steps in the Dispute resolution process as described below.

If a Referee is selected for appointment as provided by this Article, then the parties shall enter into an agreement with the Referee by signing a letter in the form as set out in Article 59. A failure or refusal by either party to sign a copy of the above letter to appoint a Referee selected by the other party in accordance with the provisions of the Contract Documents shall be considered a default under this Contract and the provisions of Article 18 or Article 19, as the case may be, shall apply, except that the time period to sign the letter and remedy the default shall be ONE (1) WORKING DAY.

Upon receipt of a letter of appointment, in the form set out in Article 59, and a copy of the Dispute Notice, the Referee shall have the authority to review the Dispute.

The fees, disbursements and other costs of the Referee, in the amounts as agreed between the parties and the Referee as set out in the letter of appointment, shall be shared equally by the Owner and the Contractor. The Referee shall submit all invoices directly to the Engineer. The Owner shall pay the Referee all amounts properly owing to the Referee as set out in such invoices, and deduct 50% of such amounts from any amounts owing by the Owner to the Contractor.

The Referee shall conduct a review of the Dispute in the manner the Referee decides is most suitable, including a review of the Contract Documents, the Engineer's initial decision, the Dispute Notice, the other party's reply, if any, an inspection of the place of the work and discussions with any persons. The parties shall comply with all reasonable requests from the Referee for additional

information and documents which the Referee considers necessary for the review. Any information given to the Referee by one party shall also be given to the other party.

The Referee may, with the written approval of both parties, retain others to assist with the review.

The Referee shall render a brief written decision on the Dispute, with copies to both parties within TEN (10) WORKING DAYS of the Referee's appointment or such longer period as agreed to in writing by both parties. The decision shall include consideration of the amount, if any, of an adjustment of the Contract time and Total Tendered Amount that should be made arising out of the matters relating to the Dispute.

After a lapse of TEN (10) WORKING DAYS from the time when the Referee delivers the Referee's written decision on the Dispute to both parties then, as the final duty regarding the Dispute, the Referee shall promptly ask each party whether the Dispute has been settled, and then provide a written report to each party summarizing the Referee's understanding of the status of the Dispute.

If both parties have given Dispute Notices relating to the same matters (claim and counterclaim) then the Referee shall consider both Dispute Notices at the same time and the Referee's decision shall be with respect to both Dispute Notices.

A Referee appointed to review a Dispute shall, subject to the timely availability of that Referee, be the Referee to review all other Disputes arising under the Contract unless the parties agree otherwise.

A Referee's decision is not binding on the parties, and a Referee's review shall be sought only for the purpose of assisting the parties to reach agreements with respect to the Dispute.

A Referee who has made a decision on a Dispute may be retained by either or both parties, to assist in mediation or settlement proceedings with respect to that Dispute conducted pursuant to this Article. A Referee may not be called by either party to give evidence with respect to the Dispute in any subsequent arbitration or litigation proceeding to resolve the Dispute, nor shall either party refer to or enter into evidence the decision of the Referee in such proceedings.

The parties will agree to release and save harmless the Referee from any liability arising from a review undertaken by the Referee.

(g) Settlement Meeting

If the Dispute is not completely resolved by agreement between the parties within TEN (10) WORKING DAYS of the receipt of the Referee's decision, then either party may give the other party written demand for a settlement meeting (the "Settlement Meeting"). A Settlement Meeting will be a meeting of a senior representative(s) of the parties who will meet to attempt to resolve the Dispute. If possible the representatives will be persons who have not previously been directly involved with the matter in Dispute. With the agreement of both parties the Settlement Meeting may be in the form of mediation conducted with the assistance of an independent mediator, acceptable to both parties.

The parties' representatives shall convene the Settlement Meeting within TWENTY (20) WORKING DAYS of the written demand for a Settlement Meeting.

A party shall not make a request for arbitration or commence litigation without first making a written demand for a Settlement Meeting.

(h) Arbitration or Litigation

If within FIVE (5) WORKING DAYS of the commencement of the Settlement Meeting, the matter is not settled by agreement, or if either party fails or refuses to participate in the Settlement Meeting within the time limit set out in this Article, then either party may request the other party to agree to submit the Dispute to binding arbitration, or may without further notice commence litigation.

The request for arbitration shall be made in writing and shall specify the issue or issues to be submitted to arbitration, and shall name a person to act as arbitrator. Within FIFTEEN (15) CALENDAR DAYS after receipt of such written request, the other party by written notice shall choose and name a second arbitrator. The two (2) arbitrators so chosen shall immediately and jointly select a third arbitrator, giving written notice to both parties of the choice, and fixing a place and time for meeting not later than THIRTY (30) CALENDAR DAYS after the date of selection of the third arbitrator, at which both parties may appear and be heard, regarding the dispute. If the two (2) arbitrators fail to agree upon a third arbitrator, or in case the party notified of the request for arbitration fails to name the second arbitrator within the time stipulated, the third arbitrator (or the second arbitrator as the case may be) upon the application of either party, of which the other shall be given notice, shall be named by a Justice of the Supreme Court of the Province of British Columbia. The parties may agree to submit the matter to one (1) arbitrator.

The arbitration shall be carried out under the *Commercial Arbitration Act* (British Columbia). The decision of the arbitrator(s) shall be made in writing within THIRTY (30) CALENDAR DAYS after the completion of hearings, and when signed by a majority of them shall be final and conclusive upon the parties thereto.

Arbitration proceedings shall not take place until after the completion or alleged completion of the work except; (a) on a question of certificate for payment; or (b) in a case where either party claims that the matter in dispute is of such a nature as to make immediate arbitration proceedings necessary while the evidence is available. The arbitrator(s) in their decision shall determine which party shall bear all or a portion of the costs and expenses of the arbitration including the fees of the arbitrator(s), and the arbitrator(s) may in any decision allocate costs and expenses between the parties.

(i) Strict Compliance with Time Limits

The parties agree that timely resolution of any Dispute is mutually beneficial and, in order to achieve timely resolution the time limits, as set out in this Article, shall be strictly enforced.

59. LETTER AGREEMENT WITH REFEREE

## SUPPLEMENTAL GENERAL CONDITIONS

This section contains Supplemental General Conditions which take precedence over the General Conditions.

### 59.1 Add: Article 59 – Contract Administration Forms

The following standard forms are included in the Contract and shall be used where applicable:

59.2 Form 1 – PRIME CONTRACTOR REQUIREMENT

59.3 Form 2 – RISK ASSESSMENT FORM

### 59.2 Add: Article 60 – Policy and Safety Compliance

60.1 **D.1 Policies** In any case where the Vendor, its employees or its sub-contractors, if applicable, shall be working alongside, interacting with or working in the vicinity of CRD employees or volunteers in the performance of the Agreement, the Vendor shall ensure that it and all its employees and sub-contractors, if applicable, comply and are familiar with the following CRD policies:

- Communicable Disease Prevention Plan
- Respectful Workplace, ADM73
- Violence in the Workplace Policy, ADM66
- Substance Use Abuse Policy, ADM64
- Smoking In the Workplace Policy, ADM58

### **FORM 1 - PRIME CONTRACTOR REQUIREMENT**

The Prime Contractor shall complete the follow form and provide to the Owner prior to the execution of the contract.

| Prime Contractor Requirement   | WorkSafeBC<br>OH&S Regulation    | Yes | No |
|--|----------------------------------|-----|----|
| Is there Notice of Project (NOP) <b>on site</b> ?  | OHSR 20.2 (1)                    |     |    |
| Are <b>areas of responsibility</b> completed on the NOP?   | OHSR 20.2 (2)(a)                 |     |    |
| Is there a <b>written agreement</b> between the owner and the directing contractor, designating them as a prime contractor (PC) for the purpose of health and safety for the project?      | WC Act 118 (1)(a)                |     |    |
| Has the prime contractor <b>appointed a qualified coordinator</b> to ensure the coordination of health and safety activities for the worksite?   | OHSR 20.3 (2) (a)(i)             |     |    |
| Has the prime contractor assigned duties to their qualified coordinator to ensure that subcontractors and workers are informed of the hazards created?                                     | OHSR 20.3 (3)(a)                 |     |    |
| Has the prime contractor <b>assigned duties</b> to their qualified coordinator to ensure the hazards are being addressed throughout the duration of the work activities?                   | OHSR 20.3 (3)(b)                 |     |    |
| Has the prime contractor received from each subcontractor on site, the name of the <b>person designated to supervise</b> their workers?  | WC Act 118 (3)                   |     |    |
| Has the prime contractor received from each subcontractor, <b>the name of the qualified person</b> designated to be responsible for the subcontractor's site health and safety activities? | OHSR 20.3 (2)(b)                 |     |    |
| Does the prime contractor hold <b>site meetings</b> with subcontractors to coordinate safety and to ensure the compliance with the Act/ Regulation?  | WC Act 118 (2)(a) b)             |     |    |
| Does the prime contractor have a system to ensure <b>suitable access for the safe delivery</b> of equipment and material to the areas on the worksite where they will be used?             | OHSR 20.4 (2)                    |     |    |
| Does the prime contractor have a system to <b>identify</b> foreseeable or reasonably known hazards?  | WC Act 118 (2)(b)                |     |    |
| Does the prime contractor have a system to ensure that subcontractors <b>notify them in advance</b> of any undertaking likely to create a hazard for a worker of another subcontractor?    | WC Act 118 (2)(b) & OHSR 20.3(1) |     |    |

|  |                                     |  |  |
|--|-------------------------------------|--|--|
| Does the prime contractor have a system to <b>communicate</b> any known hazards to all the affected subcontractors and workers?  | WC Act 118 (2)(b) & OHSR 20.3(3)(a) |  |  |
| Does the prime contractor have a system in place to ensure <b>corrective action</b> of the hazards?  | WC Act 118 2(b) & OHSR 20.3(3)(b)   |  |  |
| Does the prime contractor have a system to ensure <b>effective inspections</b> are carried out to prevent the development of unsafe acts, practices or conditions?   | WC Act 118 (2)(a)(b)                |  |  |
| Has the prime contractor provided <b>up-to-date information</b> that includes a set of construction procedures designed to protect the health and safety of workers at the workplace, developed in accordance with the requirements of the Regulation? | OHSR 20.3 (4)(c)                    |  |  |
| Does the prime contractor have a system to ensure that all persons employed on the worksite <b>attend site health and safety orientation</b> ?   | WC Act 118 (2)(b)                   |  |  |
| Does the prime contractor have a system to ensure subcontractors hold regular <b>site safety meetings or toolbox talks</b> ?   | WC Act 118 (2)(b)                   |  |  |
| Has the prime contractors ensured an <b>emergency response plan</b> (ER plan) is maintained for the worksite?  | WC Act 118 (2)(b)                   |  |  |
| Has the prime contractor ensured the ER plan is <b>communicated</b> to all workers on site?  | WC Act 118 (2)(b)                   |  |  |
| Has the prime contractor provided up-to-date information including a <b>site drawing (posted)</b> that shows the project layout, first aid location, emergency transportation provisions, and the evacuation marshalling station?                      | OHSR 20.3(4)(b)                     |  |  |
| Does the emergency response plan include a system to address work by contractors <b>outside regular hours</b> ?  | WC Act 118 (2)(b)                   |  |  |
| Has the prime contractor ensured:  | OHSR 3.20 (2)(b)                    |  |  |
| first aid <b>services</b> for the worksite?  | OHSR 3.20 (2)(b)                    |  |  |
| first aid <b>equipment and/or facilities</b> for the worksite?   | OHSR 3.20 (2)(b)                    |  |  |
| first aid <b>supplies</b> for the worksite?  | OHSR 3.20 (2)(b)                    |  |  |
| a <b>system of transportation</b> of injured workers to medical treatment?   | OHSR 3.20 (2)(b)                    |  |  |
| a system of first aid coordination <b>after regular working hours</b> (weekends, stat holidays, etc.)?   | OHSR 3.20 (2)(b)                    |  |  |
| Does the prime contractor have a system to ensure subcontractors <b>report incidents</b> , promptly to the prime contractor, including near misses?  | WC Act 118 (2)(b)                   |  |  |

|  |                   |  |  |
|--|-------------------|--|--|
| Does the prime contractor have a system to ensure incidents <b>are reviewed</b> , including near misses? | WC Act 118 (2)(b) |  |  |
|--|-------------------|--|--|

**END OF FORM 1 – PRIME CONTRACTOR REQUIREMENT**

## **FORM 2 – RISK ASSESSMENT FORM**

The Prime Contractor shall complete a Risk Assessment and provide to the Owner prior to the execution of the contract. The following sample form can be obtained from the Canadian Centre for Occupational Health and Safety.

|   |
|---|
| Sample Risk Assessment Form (Canadian Centre for Occupational Health and Safety)  |
| Name of person doing assessment:  |
| Date:   |
| Activity / Procedure being assessed:  |
| Known or expected hazards and risks associated with the activity:   |
| Possible consequences: What are the possible consequences? How likely are these consequences to occur? What is the possible severity of the harm? |
| Who is at risk?   |
| Measure to be taken to eliminate the hazard or lower the level of risk:   |
| Is there a risk of the control measures failing? What would the consequences be?  |
| Training requirements:  |
| Level of risk remaining:  |
| Action to be taken in an emergency:   |
| References, if any:   |
| Signature of Assessor   |

## Specifications

---

### 1. BACKGROUND

- 1.1. Hartland Landfill is the primary waste disposal facility for the Capital Regional District. The project site is located within the Hartland Landfill property located at 1 Hartland Avenue in Victoria, B.C. and is comprised of Phase 1 (Closed) and Phase 2 (Active) Landfills. The Phase 2 Landfill is situated in Heal Basin. It is being developed in six Cells. Currently, landfill operations are occurring in Cell 3. Cell 3 is expected to reach capacity in Q4 2024 at which time landfill operations must shift into Cell 4. The scope of this Contract is to construct all the permanent and temporary environmental control infrastructure required for the Cell 4 expansion to allow seamless transition of landfilling operations from Cell 3 to Cell 4 by October 1, 2024.
- 1.2. The Site Plan, shown on the Drawings, provides the general locations of the main entrance from Hartland Avenue, the Hartland North entrance (off Willis Point Rd), stockpile locations and on-site roads. Construction access to the Site will be provided through the Landfill's South entrance, off Hartland Avenue. Each Contractor employee and subcontractor employee must attend a Hartland Landfill orientation prior to starting any work. Employees will sign in each day before starting work at the administration building located at the Hartland South (Hartland Avenue) entrance. Employees must sign out no later than 5:15pm each day unless special arrangements to stay longer have been arranged with the CRD Engineer.
- 1.3. All material brought onsite will be required to scale in and out and provide weigh-slips for all incoming loads of material delivered to the Site. On-Site scale facilities at Hartland South Scale will be available for Contractor use.

### 2. GENERAL REQUIREMENTS

#### 2.1 PAYMENT

Related Information: See Measurement and Payment Specification 01 20 00 for description of payment items. Payment items follow the Schedule of Prices and Estimated Quantities (SOPQ) in the tender submittal.

#### Instructions Regarding Form of Tender

- i. Work completed under this Contract will be paid for at the lump sum prices and unit prices set out in the Tender Schedule of Prices and Estimated Quantities.
- ii. Incorporate all costs associated with performing all work specified herein in the prices set out in the Schedule of Prices and Estimated Quantities; allow for Contractor's overhead and profit.
- iii. Any claim by Contractor for extra payment on grounds that work performed in accordance with the drawings and/or specifications could not be properly charged to items listed in the Schedule of Prices and Estimated Quantities, will not be considered by the Owner.

- iv. Include costs for work not expressly listed in the Schedule of Prices and Estimated Quantities, but included in the drawings and/or specifications by either direct mention or implication, in items to which they pertain most closely.
- v. Prorate costs of a general nature that do not pertain to any one item among all items.

Progress Payments

Monthly progress payments will be made in accordance with Article No. 46 and 47 of the General Conditions.

Substantial Performance and Release of Holdback

Payment of holdback amounts will be made in accordance with Article No. 54 of the General Conditions.

Final Payment

Final payment will be made in accordance with Article No. 52 of the General Conditions.

Description of Payment Items

- i. "m<sup>3</sup>" is cubic metres.
- ii. "m<sup>2</sup>" is square meters
- iii. "m" or LM is lineal meters
- iv. Work set out in the Schedule of Prices and Estimated Quantities includes, but not be limited by, the descriptions set out in the Scope of Work.

2.2. SANITATION: The Contractor shall provide and maintain, so long as any of his men are employed on the work, adequate sanitary conveniences for their use. The provision, maintenance and removal shall accord in every way with the requirements of the Health Inspector

2.3. FIRST AID SAFETY: The Contractor shall provide and maintain, readily accessible at the work, all first aid equipment and installations required by the Workers' Compensation Act, and all safety and lifesaving equipment appropriate to the nature of the work

2.4. PUBLIC SAFETY AND ACCESS:

The Contractor shall effectively warn and protect the public and landfill employees from any danger as a result of the work being done.

Smoking is not permitted on landfill property. Fines will be assessed according to CRD By-law #2338.

No material or equipment shall be stored where it will interfere with the free and safe passage of landfill traffic or in such a manner that it creates a hazard.

Supplies of gasoline, fuel oils, or other petroleum products shall be stored in accordance with the British Columbia *Fire Marshal Act*. Fuels and oils shall be stored in a safe manner such that they cannot escape to any body of water.

Site security of the main work zone shall be at the responsibility of the Contractor.

Contractor is responsible for developing and ensuring safe and adequate access/egress within the rock extraction area zone noted on the drawings, which will be deemed the main work zone. Contractor is responsible for developing and ensuring safe and adequate access/egress within the stockpile areas as well. Site security of the main work zone shall be the responsibility of the Contractor.

## 2.5. SITE MAINTENANCE AND CLEANUP

The working area and natural surroundings shall be maintained in an orderly manner and shall not be encumbered with equipment, materials or debris.

Cleanup shall be a continuing process from the start of the work to final acceptance of the project. The Contractor shall at all times, and without further order, keep property on which work is in progress free from accumulation of waste materials or rubbish caused by employees or by the work. Accumulations of waste materials which might constitute a fire hazard will not be permitted. Spillage from the Contractor's hauling vehicles shall be cleaned up promptly. On completion of construction, the Contractor shall remove all temporary structures, rubbish and waste materials resulting from his operations. The cost of cleaning up shall be included in the tender price. There is no burning permitted on site.

2.6. PROGRESS MEETINGS AND REPORTS: On request, the Contractor shall attend on-site meetings as required with the Engineer for the purpose of discussion of the work performed and anticipated production. The Contractor shall provide a Weekly Progress Report for these meetings, showing the work performed, together with an accounting for delays of any kind

2.7. WEATHER CONDITIONS: The Engineer may decide that adverse weather conditions do not permit certain portions of the work to be carried out, and he may order the Contractor to discontinue the work on these portions. The Contractor shall comply with the Engineer's order, and the Contractor shall stop work on these portions and shall not continue work on these portions until he has received permission from the Engineer to proceed. The Contractor shall have no claim against the Owner for any delays due to stoppage of work by the Engineer due to adverse weather conditions.

2.8. TIME OF WORK: All operations shall be approved by the Engineer, and shall be conducted Monday through Friday inclusive during normal landfill working hours. Saturday work (7am to 2pm) may be permitted with written authorization from the Engineer. See General Conditions Article 57.

## 2.9. SAFETY

Site safety provisions shall conform to all applicable federal, provincial and regional laws, the Owner's policies and procedures developed for the landfill site (Appendix B), ordinances, codes and regulations. Where any of these are in conflict, the most stringent shall apply. The Owner's site safety rules and provisions related to the Contractors' activities at Hartland landfill include but are not limited to: traffic control; personal protective equipment; response to fire; site operating hours; accident and incident reporting; summoning first aid; safe access/egress within the main work zone and stockpile areas; open excavations; accommodation of other contractors and the public using or working on the landfill site; and signage for Prime Contractor responsibility within their main work zone. Prime Contractor signage must be present at specific entrances/exits into the main work zone.

Contractor shall clearly provide signage and delineate their main work zone to notify the public, CRD, and others coming into contact with their main work zone that they are the Prime Contractor within this area. Prime Contractor signage to include details relating to topics such as: reporting to site office first when entering the main work zone; Personal Protective Equipment to be worn at all times within the main work zone; exposure to silica and rock dust possible when in the main work zone; and all safety related aspects pertaining to the main work zone; etc. to meet WorkSafeBC standards and to the satisfaction of the Engineer.

**The Contractor will satisfy the Engineer that a job site specific safety program (SSSP) has been developed by a Qualified Person in accordance with the Workers' Compensation Board Occupational Health and Safety Regulation, and Part 3 of the *Workers' Compensation Act*, and shall incorporate all of the Owner's site requirements and restrictions. The credentials of the Qualified Person must be listed on the SSSP. The Contractor is required to submit this SSSP to the Owner at least 5 working days prior to the Notice to Proceed being given, for acceptance by the Owner. No on-site work shall commence before the SSSP is accepted by the CRD.**

The Contractor's SSSP will outline the implementation of a Respirable Crystalline Silica and Rock Dust exposure control plan as per WorkSafeBC Occupational Health Safety Regulation, Sections 6.110 to 6.115.1.

The Contractor is advised that the construction of this project is being performed adjacent to buried waste and refuse. During construction activity the potential exists to encounter pockets of landfill gas under pressure.

The Contractor is responsible for all aspects of safety at the blast site as well as protecting the active face of the landfill, and ensuring no damage to the nearby Residuals Treatment Facility and adjacent Regional Parks bike trails.

The Contractor is required to adequately communicate blasting days with the public through signage and close off the adjacent mountain bike park (gates) during blasting events. There is a map showing the area (Appendix C).

The Contractor shall inform all workers, sub-trades and their workers and the public attending the job site of the potential for the presence of methane, landfill gases, airborne silica, and other potentially hazardous conditions and of the safety precautions to be followed while at the job site.

Level 2 first aid services are available through the Owner during the hours of 6:30 a.m. to 5:30 p.m., Monday to Friday and 6:30 a.m. to 3:00 p.m., Saturday. In all cases, the Contractor shall provide the means of summoning first aid services to their respective places of work. If the Contractor is permitted to work outside the normal working hours, the provision of first aid services shall be the responsibility of the Contractor and must conform to the first aid section of the WCB Occupational Health and Safety Regulation for high risk workplaces

### **3. SCOPE OF WORK**

#### **3.1. Summary of Work**

Design drawings and specifications depict the improvements required for Cell 4 liner construction. Accurate layout of the improvements according to the design intent is the responsibility of the Contractor. Should the Contractor require more information than that shown on the drawings to accurately layout the work (ie. Coordinates, elevations etc.), the CRD will provide such information to the Contractor within 5 business days from a written request For Information (RFI) submittal. No additional cost will be provided to the Contractor to layout and/or survey the improvements as depicted in the design drawings. The Contractor's tender shall include all drafting, surveying and supervision required for it to accurately layout all improvements according to the design drawings and design intent. Construction of the Cell 4 liner will involve the following

- i. A clay berm will be constructed to solid bedrock to contain any leachate within Cell 4. Clay is available in Clay Stockpile1 & 2 on Hartland Landfill Property. The CRD Engineer shall designate the stockpile that the Contractor will utilize upon notification from the Contractor that the Clay is required. The Contractor shall load, transport, unload and place and compact clay according to the design drawings, specifications and design intent. The Contractor shall leave all existing CRD clay stockpiles in a manner that sheds surface water off the stockpile and away from roads or loading areas, so as to prevent clay runoff and mud/pooling
- ii. A total of 5 pore pressure relief underdrain ditches labelled 1A, 1B, 1, 2 and 3 (typically 1 m deep, 5 m wide at base) with 300 mm perforated pipe and aggregate materials will collect and convey collected subsurface water to three pore pressure relief system sumps (PRSS) located just upstream of the clay berm
- iii. Solid pipes from the three sumps PRSS-1, PRSS-2 and PRSS-3 will be pre-placed through the clay berm during berm construction
- iv. Blast impacted groundwater flow from PRSS-1 and PRSS-2 is to be conveyed to an existing manhole DMH0025 on the existing 450 mm PVC/ultra rib line via a new 300 mm HDPE line
- v. Leachate captured in PRSS-3 is to be conveyed into a new manhole LMH0030 on the existing 600 mm HDPE leachate gravity sewer pipe via a new 300 mm solid HDPE

pipe

- vi. GCL and Geomembrane liner totaling 29,221 m<sup>2</sup> will be installed on top of the pore pressure relief underdrain blanket in Cell 4
- vii. A total of 5 leachate collection lines mirror the same alignment as the PRS pipes (directly above) with a 600 mm perforated HDPE pipe and aggregate leachate collectors. These lines will convey leachate to the three leachate sumps (LC-1, LC-1A, LC-1B conveyed to LCSS-1 and LC-2 conveyed to LCSS-2 and LC-3 conveyed to LCSS-3).
- viii. Drain rock for the various drainage blanket and filter layers and roads/berms/fill will be crushed and screened to gradation specifications in this Contract from on-site shot rock stockpiles. The shot rock stockpile in future Cell 5A Liner area will be depleted first, down to original ground and contours (approximately 34,682 m<sup>3</sup> of shot rock). Straw has been placed on the 2.5:1 northern slope before shot rock filling began in the Cell 5A liner area. This will assist the Contractor's operator to discern when they are at design grade on the side slope. It is the responsibility of the Contractor to reclaim the shot rock in Cell 5A back to original quarry side slope and quarry floor smooth surfaces. Any shot rock shortfall for the production of aggregates will come from the NW or NE Shot Rock Stockpile at the direction of the CRD Engineer
- ix. The contractor shall supply all Quality Control testing required for aggregate testing sieve analysis and for compaction testing as per the design specifications.

### **3.2. Detailed Scope of Work**

The details scope of work follows the Schedule of Prices and Estimated Quantities (SOPQ) format in the tender submittal.

#### **3.2.1. Groundwater and Leachate Pumping Control - Item 4 of SOPQ:**

From 14 days from the Notice to Proceed until June 30, 2023, the Contractor shall mobilize personnel and equipment to the site to mitigate ground water, storm water and leachate flows onsite to protect the construction area and to ensure leachate containment for the site while under construction. The Contractor will work at the direction of the CRD Engineer and execute a pumping strategy. Responsibilities include:

Have available the following equipment to deploy at immediate notice:

- Four 2" diameter gas or diesel driven self priming pumps and no less than 200 meters of flexible discharge hose and water tight connections.
- Two 3" diameter gas or diesel driven self priming pumps with no less than 100 meters of flexible discharge hose and water tight connections
- One 4" diameter gas or diesel driven self priming pumps with no less than 50 meters of flexible discharge hose and water tight connections
- Sufficient suction hose and suction strainers/filters.
- Pump fuel tank capacity shall be sufficient to operate for up to 12 hours at full capacity without requiring top-up.

Be appropriately resourced with manpower and equipment to continuously fuel and run the pumps 24 hours per day, 7 days per week during the rainy season (September 15, 2023 to June 30, 2024) as required and at the direction of the CRD Engineer.

The CRD has a large ~1500 gpm portable diesel operated fire pump and 1000 feet of 8" flexible 200 psi rated hose onsite. The CRD will require the Contractor to setup, fuel and operate the pump in conjunction with the Contractor pumps onsite. Fuel and maintenance of the CRD fire pump will be the responsibility of the CRD.

Move pumps around the site as required and as directed by the CRD Engineer.

Update the CRD Engineer every 12 hours with progress of pumping activities. Alert the CRD Engineer of any developments onsite so that water and leachate management plans can be adapted with changing conditions.

Conduct appropriate preventative pump maintenance to ensure continuous operation. Repair or replace any leaking fittings/hoses as required.

Prior to the Pore Pressure Relief System (PRS) being fully functional, the Contractor shall be responsible for all groundwater and leachate inflows seeping into the quarry. All seepage shall be collected in sumps and pumped into the 600 mm HDPE line if deemed impacted by the Engineer, and into the 450 mm PVC line if considered suitable by the Engineer.

Groundwater captured by the PRS system PR-1, PR-1A, PR-1B and PR-2 collectors shall be conveyed by a 300 mm pipe to an existing manhole downstream of liner expansion area 5A. The future Cell 5A PRS trench to the MH0025 shall be excavated to final design geometry as part of this Contract to allow installation of the LCS and PRS piping from Cell 4 at design grades.

### **3.2.2.Cell 4 Final Grading – Item 5 of SOPQ**

The existing quarry floor surface was blasted and excavated to the grades shown in the existing topography drawings. The surface is a mixture of fractured rock and bedrock. Any cuts into the existing surface shall require the Contractor to drill, blast, rip or hammer the quarry floor and slopes. Cell 4 Liner surface preparation is broken into 4 areas (see drawing 24-W1057-301), as follows:

- **Quarry Floor Regrading:** Requires the Contractor to cut (approx. 1,631 m<sup>3</sup>) and fill (approx. 1,745m<sup>3</sup>) the existing quarry floor surface to achieve the Cell 4 sub liner Pore Pressure Relief Design Slopes (PRS) and contours. Fill material shall be done using 75-150 mm clear crush, which is the same aggregate that will be placed in the first layer of fill for the Pore Pressure Relief System aggregate drainage layer, as shown on drawing 24-W1057-

302. Excavation will require drilling, blasting, ripping or hammering (as determined by the Contractor).

- **Trenches for PRS system** including PR1, PR1A, PR1B, PR1C, PR2 and the first 90m of PR3 (approx. 9,435 m<sup>3</sup> Cut): Requires the Contractor to excavate by drilling, blasting, ripping or hammering (as determined by the Contractor) to achieve a smooth surface for the PRS system piping as detailed in Drawings 24-W1057-301 and 24-W1057-308.
- **Overburden Pile Cleanup and PR3 Trench excavation:** Excavation in this area is comprised of existing stockpiles of overburden, till, boulders, shot rock and in some cases Cell 2 garbage (along PR3 trench center alignment), representing approximately 7,048m<sup>3</sup> of cut material. Excavation in these areas will be relatively easy and won't require blasting or drilling etc. Excavation of overburden on stockpiles shall extend down to the original black liner as viewed adjacent to the stockpiles. The 965 m<sup>3</sup> of fill in this area represents engineered fill required to be placed and compacted for the future 140m bench road support and to be used to anchor Cell 4 liner.
- **DMH-0025 & LMH-0030 Deep excavation** (341 m<sup>3</sup> Cut). Excavation to install tie into DMH-0025 and install new manhole LMH-0030.

The following outlines where excavated & cleanup materials will be deposited:

- Biosolids Growing Media stockpile (as identified on drawing 24-W1057-102) shall not be disturbed or moved. If the Contractor requires removal to complete Contract work, the Contractor shall relocate the soil upslope of its's current position, in an area designated by the CRD Engineer. No additional cost will be paid to relocate any Biosolids Growing Media.
- Large Boulders: boulders larger than 600 mm. in diameter shall be reduced to a maximum size of 600 mm. diameter and placed in one of the shot rock stockpiles onsite as designated by the CRD Engineer.
- Excavated rock (600 mm minus) shall be moved to the Shot Rock pile in Cell 5A. If the shot rock stockpile in Cell 5A is depleted, then the Contractor will move shot rock to the North East or North West shot rock stockpile at the direction of the CRD Engineer.
- Overburden, glacial till or soil: All boulders larger than 150mm shall be removed before transporting to a designated overburden/glacial till stockpile located in the North East stockpile storage area as designated by the CRD Engineer
- Recyclable Material (Metal, culverts etc): Shall be cleaned of soil and rocks and moved to the Hartland Recycle depot and placed in the mixed recycle bin.

- Garbage or old landfill infrastructure (tarps, HDPE, PVC pipe etc): Shall be hauled to and deposited at the landfill active face as directed by the CRD Engineer.

**Item 5.01 of SOPQ - Drilling, Blasting, Excavation of PRS Trenches (9,435 m3)**

Trench excavation shall be completed to a minimum 50 meters past the Cell 4 Clay liner berm on the East side of Cell 4 liner. PR1 trench shall extend past cell 5A liner limits to allow installation of the PR1C pipe and the deep excavation required to tie into DMH0025 and the new DMH0030 manhole.

Contractor to provide all labour, material, and equipment required for drilling, blasting, loading, hauling and stockpile material, on-site in PRS trenches as directed by the Engineer. Includes shaping of any over-excavation in trench to final design subgrade geometry with minus 200 mm shot rock. Also includes the removal of isolated boulders or rock fragments larger than 200 mm in diameter. Design tolerance for the trench is  $\pm 75$  mm from design surface. Includes all additional blasting and grading required for placing the pipe bedding and coarse crush PRS drainage layer in the trench. Excessive drilling, blasting and ripping outside work areas shall not be the responsibility of the Owner. All such exceedances shall be at the Contractor cost. Unless otherwise specified in the Contract, calculation of quantities will be on a neat line basis, as calculated from the design lines shown on the Drawings, adjusted to incorporate design changes and field-fits authorized by the Engineer. Any material placed or excavated beyond the design lines is considered Unauthorized Work and the Contractor will not be entitled to any additional compensation.

**Item 5.02 of SOPQ - Shallow Rock Excavation using Ripping and Pneumatic Breakers (Depths less than 1.0 m) from Quarry Floor (1,631m3)**

All labour, equipment and materials required to excavate any loose gravels, cemented, dense and compacted materials and all fractured, solid rock or bedrock ledges including loading, hauling and stockpile material, on-site in an area as directed by the Engineer. The Contractor is responsible at its own cost to evaluate and ensure that the proposed equipment is suitable for the intended purpose and onsite bedrock quality. Includes all additional rock excavation and grading required for establishing the design subgrade surface for PRS and liner deployment as outlined in the Contract Documents or as directed by the Engineer in its sole assessment. Grading tolerance is  $\pm 75$  mm from design surface. Excessive rock excavation outside work areas shall not be the responsibility of the Owner. All such exceedances shall be re-and-re at the Contractor's cost. Unless otherwise specified in the Contract, the calculation of quantities will be on a neat line basis, as calculated from the design lines shown on the Drawings, adjusted to incorporate design changes and field-fits authorized by the Engineer. Any material placed or excavated beyond the design lines is considered Unauthorized Work and the Contractor will not be entitled to any additional compensation. Schedule 2 of the Specifications provides Coordinates & Elevations of the Design Subgrade Surface for PRS and liner deployment. Also included are coordinates for to assist with location of the Cell 4 Liner infrastructure.

**Item 5.03 of SOPQ - Load, Haul, Place 75-150 mm Drain Rock in designated fill areas on Quarry Floor to reach design subgrade elevation (1,745m<sup>3</sup>)**

All labour, loading from stockpile, hauling, placing and shaping, equipment, and all other incidental work required to place 75 to 150 mm clear crush in all designated fill areas on the quarry floor to reach design subgrade elevation, as defined on Drawing 24-W1057-300. Also includes all survey control, quantity calculations. Also includes loading, hauling, placement and stockpiling in a manner acceptable to the engineer of all the screened products.

**Item 5.04 of SOPQ - Loose Fill Excavation and Haul to Designated Stockpile Area (depths Variable) from Historic Stock Pile Areas (7,048m<sup>3</sup>)**

All labour, equipment to excavate, load and haul and re-stockpile the removed materials at the designated stockpile locations, as designated in Section 00 51 00 Subsection 1.03 and in the Scope of Work, section 3.2.2 paragraph "Overburden Pile Cleanup and PR3 Trench excavation". Work shall include excavating all materials down to temporary liner, hauling, placing and shaping, equipment, and all other incidental work required to remove all stockpiled overburden and expose existing liner. Also includes all survey control, quantity calculations.

**Item 5.05 of SOPQ - Subgrade Grading, Picking, Smoothing and Proof-Rolling (Lump Sum)**

All labor, equipment and materials required for grading, picking, smoothing, and proof-rolling of all areas in preparation for their respective material placement. Removing all oversize or protruding debris larger than 50 mm. Also includes decommissioning and safe storage of any pipe, culverts, manholes. The storage area will be established by the Engineer. As part of this item, the Contractor is required to remove, dispose, and replace any wet, soft, or otherwise unsuitable materials, as determined by the Engineer, and replace them with Owner-supplied or equivalent clean fill. Scarify areas showing excessive compaction to minimum depth of 150 mm. The Contractor shall fully satisfy itself to the full extent of the work during the mandatory site visit

**Item 5.06 of SOPQ - Grading Fill in Stockpile Area for 140 m Bench Road (965 m<sup>3</sup>)**

All labor, equipment to excavate, load and haul place and compact 75 – 150mm Clear Crush grading Fill in Stockpile Area to support 140 m Bench Road. Also includes all survey control, quantity calculations. Compact to min 92% MMPD in 300 mm lifts as per Contract Documents. Payment to include all labor, materials, and compaction testing.

**Item 5.07 of SOPQ - Deep Excavation and Backfill for Pipe at DMH-0025 & LMH-0030 (341 m<sup>3</sup>)**

Contractor shall provide all labour, equipment to excavate and temporarily stockpile excavated materials near excavation to allow for installation of 300 mm PRS-1&2 discharge pipes into existing DMH-0025 and a new manhole (LMH-0030) to tie into the existing 600mm leachate pipe from LCSS1 (600mm) and PR3 (300mm). Excavations will be up to 6 m deep. Contractor is responsible for developing excavation and shoring plan that meets trenching safety requirements of Worksafe BC. Contractor to ensure that existing 600 mm HDPE pipe remains supported during excavation. Contractor to re-use

any well graded backfill material removed during excavation. Any poor quality soil/boulders/till from excavation shall be hauled to the NE overburden/till stockpile. Clean, well graded & engineered backfill to be placed into excavation with excavator in 300 mm loose lifts and compacted with excavator mounted compactor to 90% Modified Proctor. Also includes all survey control, quantity calculations. Also includes stockpiling in a manner specified in these documents and acceptable to the Engineer. Payment to include all labour, materials, and compaction testing..

### **3.2.3. Clay Seals and Key Trenches – Item 6 of SOPQ**

#### **Item 6.01 of SOPQ - Shot Rock Excavation for South Clay Seal (1,200 m3)**

All labour, equipment and materials required to excavate any loose gravels, cemented, dense and compacted materials and all fractured, loose rock or bedrock ledges including loading, hauling and stockpile material, on-site in an area as directed by the Engineer. Excavation shall continue until all loose rock is stripped down to solid bedrock in clay seal area. The volume calculation shall be conducted by determining the volume between the existing (pre-construction surveyed) surface and a surveyed surface of the solid bedrock.

#### **Item 6.02 of SOPQ - Compacted Clay Seal Placement on Quarry Floor in South Clay Seal and North Clay Seal (1,800 m3)**

All labour, equipment to load Owner supplied clay from clay stockpile, haul to Clay Seal Areas, spread, moisture condition and compact clay in 300 mm loose lifts to 95% Modified Proctor Density to achieve design subgrade elevations in the clay seal areas. Density to be verified with nuclear densometer at frequency of one test per 25 lineal m of trench. Contractor responsible for groundwater control during excavation. Clay shall not be placed below water level, dewater first. Payment to include all labour, materials, and compaction testing.

#### **Item 6.03 of SOPQ - Excavate and Shape PRS3 Key Trench (360 m3)**

All labor, material and equipment required to excavate, shape, haul, smooth and pick materials to achieve design profile of PRS Collector #3 key trench. Also includes sub-excavation of waste, soil, and loose rock in a 2 m wide vertical key trench along trench center line to competent bedrock. The depth of the trench before key trench excavation varies from 0.5 m to 4 m as shown on the Contract Drawings. Grades range from 0.6% to 3%. The depth of key trench is unknown, but is expected to be less than 2 m.

#### **Item 6.04 of SOPQ - Place and Compact PR3 Clay Key Trench Seal for First 90 m of Collector (360 m3)**

All labour, equipment to load Owner supplied clay from clay stockpile, haul to PR3 Key Trench Clay Seal Area, spread, moisture condition and compact clay in 300 mm loose lifts to 95% Modified Proctor Density to achieve design subgrade elevations in the PR3 trench. Compaction method at Contractor's discretion. Density to be verified with nuclear densometer at frequency of one test per 25 lineal m of trench. Design density must be achieved throughout fill. Contractor responsible for groundwater control during excavation. Clay shall not be placed below water level, dewater first. Payment to include all labour, materials, and compaction testing.

**Item 6.05 of SOPQ - Excavate Clay Toe Berm Key Trench to Solid Bedrock (180 m3)**

All labor, material and equipment required to excavate, shape, haul, smooth and pick materials to achieve design profile of the Clay Toe Berm key trench. Also includes sub-excavation soil, and loose rock in a 1 m wide vertical key trench along trench center line to competent bedrock. The depth of key trench is unknown, but is expected to be less than 2 m. Where the clay berm passes over garbage, the 1-meter wide keyed clay trench is not required but excavation shall extend to an elevation and materials approved by the Engineer.

**Item 6.06 of SOPQ -Place and Compact Clay om Toe Berm Key Trench Seal (180 m3)**

All labour, equipment to load Owner supplied clay from clay stockpile, haul to Clay Toe Berm Key Trench Clay Seal Area, spread, moisture condition and compact clay in 300 mm loose lifts to 95% Modified Proctor Density to achieve design subgrade elevations along Toe Berm center line. Contractor responsible for groundwater control during excavation. Clay shall not be placed below water level, dewater first. Payment to include all labour, materials, and compaction testing.

**3.2.4.Clay Toe Berm - Item 7 of SOPQ**

Upon completion of the “keyed” clay trench (SOPQ items 6.05 and 6.06) the Cell 4 Clay Toe Berm shall then be partially constructed to the liner system anchor trench elevation. PRS and LCS solid through-pipes shall be pre-installed, as shown on the drawings. Once the liner is installed and properly anchored along the Middle Bench Road, the 140 Bench Road the Clay Toe Berm and the PR-3 collector, the clay toe berm should be raised to final design elevation.

- a. Clay berm installation includes all labor, surveying, compaction testing, equipment and materials required to load, haul, place and compact clay in 300 mm loose lifts to a compaction density of 95% Modified Proctor and moisture content of  $\pm 2\%$  of optimum. Compaction method at Contractor’s discretion. Density to be verified with nuclear densometer at frequency of one test per 500 m<sup>3</sup> of clay placed. Design density must be achieved throughout fill, overfill and trim structure as necessary. Contractor responsible for groundwater control during excavation. Clay shall not be placed below water level, dewater first.
- b. Install PRS and LCS solid pipes through clay toe berm. Includes bedding of pipes on clay and careful tamper compaction of clay around pipes to achieve well compacted clay seal all around each pipe Compact clay in 100 mm loose lifts to a compaction density of 95% Modified Proctor and moisture content of  $\pm 2\%$  of optimum. Compaction method at Contractor’s discretion, must not damage pipe. Density to be verified with nuclear densometer at frequency of one test per pipe penetration.
- c. All labor, equipment and materials required to load, haul and place the 12.5 to 25 mm Clear Crush Gravel Layer in a single, minimum 200 mm thick layer. Payment to include all labour, materials, shipping, handling, procurement, equipment, and all other incidental work. Fill volume is 1,540 m<sup>3</sup>

- d. All labor, equipment and materials required to supply and install erosion control blanket on completed clay berm surface to prevent erosion. Erosion control blanket to be staw-coconut mat, pinned down per manufacturer's specifications. Total application area is 1,425 m2.

### 3.2.5. Aggregate Production

- a. The Pore Pressure Relief System (PRS) and Leachate Collection System (LCS) will require placement of drainage media including 75-150 mm and 25-75 mm clear crush drainage aggregates, 12.5-25 clear crush graded filter and minus 12.5 mm screen reject. All of these materials shall be produced from on-site shot rock aggregate that has been stockpiled. All required aggregates shall be crushed, screened and stockpiled (if required) by the Contractor to conform to gradation sizes defined in the Drawings and specifications. The Contractor shall supply and deliver all 25x50 Clear Round Gravel (not produced from on-site shot rock aggregate) as required by the specifications and drawings.
- b. The approximate quantity of aggregates is as follows:

| Description                  | Estimated Volume Bulk (m3) |
|------------------------------|----------------------------|
| Minus 12.5 mm Screen Reject  | 14,421                     |
| 12.5 x 25 mm Clear           | 5,844                      |
| 25 x 75 mm Clear             | 23,377                     |
| 75 x 150 mm Clear            | 13,294                     |
| 25 x 50 Clear Round Gravel * | 3,630                      |
| <b>Total</b>                 | <b>60,566</b>              |

The volumes outlined in the table above represent a pure design, compacted aggregate volumes and does not account for bulking loss during compaction, over excavation during construction, loss, road repair/fill etc. The Contractor shall develop their own production volumes to ensure they account for all aggregate required to meet the final design surfaces for all Cell 4.

\*To be supplied by Contractor (ie not crushed from Shotrock)

- c. There is no additional aggregate stockpile space, other than the working area in the future Cell 4 and Cell 5A areas to produce and stockpile crushed aggregate. It is the responsibility of the Contractor to manage the site logistics of crushing, quality control, stockpiling and aggregate placement

within the Cell 4 and Cell 5A liner working area. Upon completion of Cell 4 Liner Construction, the Contractor shall remove all excess stockpiles to an area on Hartland Landfill property as designated by the CRD Engineer, away from the future Cell 5A liner work area.

- d. For the production of crushed granular material and shot rock stockpiled material the Contractor shall provide crushing equipment, where applicable, such that all blasted rock can pass a sieve when used. Rock that will not pass through the crusher screens shall be reduced to a maximum 500 mm size and then crushed. No additional payment will be considered for the re-drilling, blasting or using a hydraulic ram to reduce the oversized rock to the specified size or a size required to pass through the Contractor's crusher screens. There will be no "overs". In addition, the Contractor shall not "cherry pick" shot rock from the NE or NW stockpile. The NE or NW stockpile shall be depleted in layers, not leaving any boulders or oversize material behind, or cast to the side.
- e. The Contractor shall provide and maintain in good operating condition, all plant, equipment, tools and transport necessary to comply with the requirements of these Specifications, such as excavating and loading equipment, grizzlies, feeders, crushers, screening equipment, loading bins, weigh scales, transport, spreading, grading and compaction equipment or any other plant, equipment, tools or materials that may be required for the full completion of the work intended under this Specification. Such plant, tools, transport and equipment shall be of a type and capacity to ensure proper construction and maintenance of access roads, development of Cell 4, production of granular aggregates to the standard of uniformity required and adherence to the construction schedule
- f. Gradation testing will be performed by the Contractor's independent lab to determine acceptability of the products. The Contractor shall adjust his crushers and/or screening plants and provide such screens as may be necessary to produce and maintain acceptable gradations of granular aggregates. The Contractor shall provide and maintain equipment and qualified personnel to perform all quality control testing (QC) necessary to determine and monitor the characteristics of the materials produced.

The Contractor shall provide safe and convenient means for accurately and representatively sampling the aggregate stream at the appropriate frequency. The minimum frequencies of QC testing for each of the specified material products are as follows:

- One (1) per 250m<sup>3</sup> on the first 2500m<sup>3</sup> produced of each product, or until on-spec aggregate is being produced.

- One (1) per 1000m<sup>3</sup> on the remaining on-spec cubic meters produced of each product

Copies of all gradation (sieve analysis) QC testing shall be submitted to the Engineer within one (1) hour of the completion of each test. Two gradation QC tests must be completed at each testing interval. Dry gradation QC tests must be produced within (1) hour of the specified material being produced, and Wet gradation QC tests must be produced within twenty (24) hours of the specified material being produced.

The Contractor will advise if gradation QC testing results show gradations non-conforming to specifications. If the Contractor fails to remedy the defects as soon as reasonably possible, crushing and/or screening shall cease at the end of the shift and will not recommence until the crusher has been repaired or readjusted to produce the required gradation of aggregates.

All off spec aggregate will be separated and immediately moved away from finished aggregate piles to prevent mixing with on-spec aggregate. The Contractor can blend off-spec aggregate back into the crushing/screening operation to reuse the material. Alternatively, the CRD will designate a place for off spec materials to be placed on the Hartland Landfill property. The Contractor will not be compensated for extra crushing or hauling as a result of the production of off-spec aggregates.

When the work of reclaiming shot rock or aggregate processing operation is finally discontinued, the Contractor shall trim off and dress all slopes and material piles and leave the site and shot rock storage piles in a neat, trim, and tidy condition to the satisfaction of the Engineer. The trimming, sloping, dressing, and drainage ditching of the sites and the maintenance and clearing on any blockage of the access roads caused hauling/reclaiming shot rock, etc., will be considered as work incidental to Cell 4 Construction.

g. Stockpiles:

- CRD Stockpiles (including shot rock, aggregate and clay) shall be left neat and regular in shape, occupying as small an area as practicable. The stockpiles shall be readily accessible for loading without obstructing existing roads or other landfill facilities.
- Stockpile materials are not to be dumped over any bank. Aggregates must be placed onto the level surface of the stockpile at the same elevation as the truck hauling the material.
- In accordance with WorkSafeBC Occupational Health and Safety Regulations 20.14.2 and 20.14.3, the following recommended guidelines are to be followed:

- Stockpile faces shall be placed at a slope of not more than 33° (1.5H to 1.0V). A minimum 10 metre bench is required for every 10 metres of vertical stockpile height. There will be no dumping of materials using haul trucks on stockpiles with slopes greater than 3.0 metres high, unless there is a safety berm in place (safety berm height shall be at least equal to half of haul truck wheel height) and a dump person directing vehicles to dump point. Safety berms shall be maintained at the crest of all stockpile slopes greater than 3.0 metres in height.
- Planked or protected runways shall be provided for operating trucks on stockpiles or on drainage blankets when the Engineer deems them necessary to prevent dirt being tracked onto the crushed granular aggregates or onto the drainage layers in Cell 4 construction area.
- The Engineer may, on receipt of a written request from the Contractor, permit the Contractor to build the final stockpile by bulldozing the aggregates from a feed pile at the end of a production belt provided that:
  - The bulldozer(s) to be used shall be equipped with U shaped pushing blades;
  - The aggregates do not become contaminated with oversize material, mud or other objectionable material picked up from the pit floor or general working areas;
  - The crushed granular aggregates are distributed evenly over the final stockpile area in lifts not greater than 300mm in depth;
  - The cone of the feeder pile at the end of the production belt shall not, without express permission, be allowed to build up to a greater height than 3 metres; and;
  - No appreciable segregation shall occur in the main stockpile as a result of using this method of stockpiling
  - The Engineer, by granting the Contractor permission to stockpile by bulldozing, shall not in any way be considered to have relieved the Contractor of responsibility for constructing a satisfactory, uniform, clean stockpile. The Engineer may, at any time that he becomes dissatisfied with the quality of stockpiling which may result from this method of construction, cease construction of the stockpile by means of a belt feed and bulldozer, and require the Contractor to construct the pile in an alternative manner;

- h. The Contractor shall allow the CRD, CRD's Consultant or CRD's Quality Assurance Lab access to the aggregate stockpiles for the purpose of obtaining samples.

### **3.2.6.Pore Pressure Relief System – SOPQ Item 8**

#### **Item 8.01 of SOPQ - Sub Liner Pore Pressure Relief System layered aggregate drainage blanket.**

All labor and equipment materials, shipping, handling, applicable broker and customs fees, crushing, screening, loading, hauling, and placement and all other incidental work associated with installation of the PRS layered aggregate blanket, including but not limited to:

- a. 75-150 mm Clear Crush on PRS-1, PRS-1A, PRS-1B and PRS-2 alignment and PRS sump surround
- b. 75 - 150 mm Clear Crush in a single, minimum 300 mm thick layer
- c. 25 to 75 mm Clear Crush in a single, minimum 300 mm thick layer and PRS Trenches
- d. deploy and seam the 8 oz Non-woven needle punched geotextile cushion layer as per Contract Documents. Also includes any sand bags or sand backfill, warning tape and all other incidental work
- e. 12.5 mm Screen Reject in a single, minimum 200 mm thick layer
- f. 12.5 mm Screen Reject for 100 mm thick pipe bedding beneath all PRS pipes (crushing and screening only considered as loading, hauling and placement of bedding is outlined in Item 8.03 of SOPQ)

#### **Item 8.02 of SOPQ - Procurement and delivery of all PRS piping**

All labor, equipment, materials, shipping, handling, applicable broker and customs fees and all other incidental work associated with sourcing, and purchasing, of 300 mm DR 11 HDPE Solid Pipe, Perforated Pipe, fittings, control valves, knife gates, sampling spigots, Sump Drywell, New Manhole LMH-0030 geogrid, supply of 25 – 50mm clear round washed gravel required for the complete construction of Cell 4 Pore Pressure Relief System. Also includes all costs associated with storing and safeguarding the material on site or to a designated supplier storage area located in Victoria or the Lower Mainland until such time that the material is installed by the Contractor.

#### **Item 8.03 of SOPQ – Installation of PRS System Piping**

Section includes construction of the PRS drains including perforated piping, clean outs, and drainage aggregate layers. Note that the PR-3 drain requires installation of a GCL liner while the PR-1 and PR-2 drains are unlined.

Contractor to provide all labor, equipment and other incidental materials associated with installing the 300 mm DR 11 HDPE Solid Pipe, Perforated Pipe, fittings, control valves, knife gates, sampling spigots, Sump Drywell, geogrid, 25 – 50mm clear round washed gravel, for the construction of Cell 4 Pore Pressure Relief System. Scope includes but is not limited to the following:

- a. deploy pre-purchased Geosynthetic Clay Liner (GCL) for Bottom of PRS-1 Collector between 1+50 and 2+20 on PRS-1
- b. Load, Haul, Place, Minus 12.5 mm Screen Reject Pipe Bedding and 12 oz Geotextile Separation Layer. All labor, materials, and equipment required to deploy and seam the 12 oz Non-woven needle-punched geotextile cushion layer
- c. Careful transport of all perforated and solid 300mm pipe from laydown area, inspection of pipe and removal of any debris, welding of pipe segments per Contract Documents, installation of pipe along designated trench centerline. Also includes installation of all wyes, tees and elbows at specified locations and placement of 25 to 50 mm Round Washed Gravel Pipe Surround to designated configuration, as shown on Drawings. Contractor is responsible to ensure that invert elevations of pipe are maintained within 25 mm of specified invert elevations.
- d. install culvert and pre purchased Geosynthetic Clay Liner (GCL) for Bottom of Collector between 0+00 and 1+00 on PRS-3 as per Contract Documents. Also includes any sandbags or sand backfill, warning tape and all other incidental work.
- e. hauling and placement of Minus 12.5 mm Screen Reject Pipe Bedding and 12 oz Geotextile Separation Layer. All labor, materials, and equipment required to deploy and seam the 12 oz Non-woven needle-punched geotextile cushion layer PRS-3 as per Contract Documents. Also includes any sand bags or sand backfill, warning tape and all other incidental work.
- f. Solid and Perforated 300mm DR11 HDPE pipe and 25 to 50 mm Round Washed Gravel) on PRS-3. Contractor is responsible to ensure that invert elevations of pipe are maintained within 25 mm of specified invert elevations. All Drainage Aggregates Between Stations 0+00 and 0+160 on PRS/LCS 3.
- g. welding of pipe segments per Contract Documents, installation of pipe along designated trench centerline. Also includes installation of all wyes, tees and elbows at specified locations and installation of the temporary 300 mm HDPE DR 11 Solid Pipe and tie-in to the New Manhole on 600 mm HDPE Line.
- h. Install 300 mm solid HDPE DR 11 Clean-out structures c/w blind flange and stainless-steel bolts including trenching and backfill works and lock-blocks as per the Contract Documents. Work also includes inlet earthworks shaping.
- i. Install 1500 mm Sump Drywell c/w Biaxial Geogrid Wrap at PRS1, PRS2 and PRS3. The Pore Pressure System Sumps PRSS-1, PRSS-2 and PRSS-3 shall be installed on the PRS lines and surrounded by drainage aggregate as shown in the Drawings. Note; the CRD has a number of unused 1500mm x 900mm drywell barrels available onsite (see material provided by CRD in General Conditions, Article 25).

- j. Install 300 mm Clean Out Pipe and Fittings for PRS System. Pipe length is 216 m. Careful transport of pipe from laydown area, inspection of pipe and removal of any debris, welding of pipe segments per Contract Documents, installation of pipe along designated centerline. Also includes installation of all wyes, tees and elbows at specified locations and supply and placement of 25 to 50 mm Round Washed Gravel Pipe Surround to designated configuration, as shown on Drawings. Contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations.
- k. Install 300 mm solid conveyance pipe from PR-1C Wye to existing DMH0025 and from PR3A to LMH-0030 manhole, including tie in at the manhole. Does not include excavation and backfill which is under other payment item.
- l. Install 300 mm solid conveyance pipe from PRSS-1 and PRSS-2 to PRS-1 Wye. Contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations.
- m. Installation of all PRS cleanouts for Cell 4 shall be installed as shown in the drawings.
- n. No blasting shall occur within 50 m of any geosynthetic materials that have been deployed on this project.

### **3.2.2.Liner System Procurement and Installation – Item 9 of SOPQ**

#### **Item 9.01 of SOPQ – Procure and deliver Synthetic liner system**

Procure and deliver Synthetic liner system including Bentomat DN GCL Supergroove, 60 mil Double-Textured HDPE Geo-membrane & 8 oz. & 12 oz. Non-Woven Geotextile

Supply includes all labour, equipment, materials, shipping, handling, applicable broker and customs fees and all other incidental work associated with sourcing, and purchasing, of White, 60 mil thick, Double-textured, HDPE Geomembrane, Geosynthetic Clay Liner (GCL), 8 oz Non-Woven Geotextile and 12 oz Non Woven Geotextile. Also includes all costs associated with storing and safeguarding the material on site or to a designated supplier storage area located in Victoria or the Lower Mainland until such time that the material is installed by the Contractor.

#### **Item 9.02 of SOPQ – Install Synthetic Liner System**

All labour, and equipment required to deploy pre-purchased Geosynthetic Clay Liner (GCL) as per Contract Documents. Also includes any sandbags or sand backfill, warning tape and all other incidental work.

Install, heat fuse and test 60 mil HDPE liner as per Contract Documents. Tenderers are requested to ensure that they do not double count installation of this geomembrane layer in other payment items. This work does not include the supply and installation of boots around

storm or culverts that penetrate the membrane system, nor the liner anchor trench, which are covered under separate payment items.

Deploy and seam the 12 oz Non-woven needle punched geotextile cushion layer as per Contract Documents. Also includes any sand bags or sand backfill, warning tape and all other incidental work.

All labour, equipment and materials required to fabricate and install water tight geomembrane pipe penetration boot. The pay item applies to all pipe penetrations. Includes dual, independent stainless-steel banding, neoprene gaskets, caulking, extrusion welding (if requested by Engineer), Fernco type cover, and geotextile UV protection as per Contract Documents.

A 200 mm Bentonite Cliff Edge Seal will be installed along the western quarry wall and the 60 mil double textured HDPE geomembrane & non-woven geotextile. The liner must be contoured so there is no more than 50 mm gap between the bedrock and liner. Alternately, the Contractor may secure the GCL and HDPE liners to the bedrock surface with Hilti Bolts and strapping, followed by the Bentonite Cliff Edge Seal

All materials, labour and equipment required to construct Cell 4 Geomembrane anchor trench as per Contract documents. Also includes the 12 oz geotextile wrap, 12.5 mm screen rejects backfill, and warning tape.

**Item 9.03 of SOPQ – Install Above Liner Leachate Collection System Drainage Blanket**

All labor, equipment and materials required to crush, screen load, haul and place the LCS Aggregate Drainage Blanket. Scope to include all labor, handling, equipment, and all other incidental work required to process, crush, screen and stockpile blasted shot rock to produce aggregate layers for use on site as per the Contract Documents. Also includes loading, hauling and stockpiling in a manner acceptable to the engineer and as specified in Section 00 51 00 Part 1.03 C of all the screened products. Also includes all cost associated with QC testing as specified in Section 00 51 00 Part 1.03 C. Drainage blanket includes the following work:

- a. crush, screen, load, haul and place minus 12.5 mm Screen Reject in a single, minimum 200 mm thick layer
- b. deploy and seam the 8 oz Non-woven needle punched geotextile cushion layer as per Contract Documents. Also includes any sand bags or sand backfill, warning tape and all other incidental work
- c. crush, screen, load, haul and place the 25 to 75 mm Coarse Drain Rock in a single, minimum 500 mm thick layer.
- d. crush, screen, load, haul and place the 12.5 to 25 mm Clear Crush Gravel Layer in a single, minimum 200 mm thick layer.
- e. crush screen, owner supplied shot rock to produce minus 12.5 mm Screen Reject for 100 mm thick pipe bedding beneath all LCS pipes (crushing and

screening only considered as loading, hauling and placement of bedding is outlined in Item 10.02 of SOPQ)

- f. Crush, Screen, Load, Haul and Place 75-150 mm Drain Rock for Drywell Surround on LCS-1, LCS-1A, LCS-1B and LCS-2 alignment and LCS sump surround

### **3.2.3.Cell 4 Leachate Collection System Procurement and Installation - Item 10 of SOPQ**

#### **Item 10.01 of SOPQ – Procure and Deliver Leachate Collection System Piping**

All labor, equipment, materials, shipping, handling, applicable broker and customs fees and all other incidental work associated with sourcing, and purchasing, of 600 mm DR 11 HDPE Solid Pipe, Perforated Pipe, fittings, control valves, knife gates, sampling spigots, Sump Drywell, geogrid, supply of 25 – 50mm clear round washed gravel required for the complete construction of Cell 4 Leachate Collection Pipe System. Also includes all costs associated with storing and safeguarding the material on site or to a designated supplier storage area located in Victoria or the Lower Mainland until such time that the material is installed by the Contractor.

#### **Item 10.02 of SOPQ – Install Leachate Collection System**

Contractor to provide all labor, equipment and other incidental materials associated with installing the 600 mm DR 11 HDPE Solid Pipe, Perforated Pipe, fittings, control valves, knife gates, sampling spigots, Sump Drywell, geogrid, 25 – 50mm clear round washed gravel, for the construction of Cell 4 Leachate Collection System. Scope includes but is not limited to the following:

- a. Careful transport of pipe from laydown area, inspection of LCS pipe and removal of any debris, welding of pipe segments per Contract Documents, installation of the Solid and Perforated 600 mm and 300mm DR11 HDPE pipe along designated trench centerline. Also includes installation of all wyes, tees and elbows at specified locations placement of 25 to 50 mm Round Washed Gravel Pipe Surround to designated configuration on LCS-3, as shown on drawings. The contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations.
- b. The LCS-2 and LCS-3 leachate collectors shall be flanged just downstream of the Cell 4 Clay Toe Berm. Each pipe shall be come with a removable valve, sampling station and permanent cleanout as shown in the drawings. Leachate captured by LC-2 and LC-3 on top of the liner shall flow through the cross connectors by gravity to LCS-1.
- c. Supply and Install New Manhole LMH0030 1500 mm Solid Rings MH Intake tower c/w Explosion Proof Lid as outlined in the Contract Documents. Payment to include all labour, materials, shipping, handling, procurement, equipment, and all other incidental work

- d. Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 oz Geotextile Separation Layer. All labour, materials, and equipment required to deploy and seam the 12 oz Non-woven needle-punched geotextile cushion layer as per Contract Documents. Also includes any sand bags or sand backfill, warning tape and all other incidental work
- e. Install solid 600 mm DR 11 HDPE leachate Collector Pipe and Fittings and supply and installation of 25 to 50 mm Round Washed Gravel on PRS-1, PRS-1A, PRS-1B and PRS-2.
- f. All labour, materials, and equipment necessary to install solid 600 mm DR 11 HDPE leachate Collector Pipe and Fittings on PRS-1, PRS-1A, PRS-1B and PRS-2.
- g. Install solid 600 mm DR 11 HDPE leachate Collector Pipe include required trenching and Fittings required between LCS-2 and LCS-1 and Between LCS-3 and LCS-1 include required trenching.
- h. Install LCS Precast 1500 mm sumps – Drywell MH Intake tower including Biaxial Geogrid Wrap outlined in the Contract Documents. Payment to include all labour, materials, shipping, handling, procurement, equipment, and all other incidental work
- i. Install 600 mm solid HDPE DR 11 Clean-out structure c/w blind flange and stainless-steel bolts including trenching and backfill works and lock blocks as per the Contract Documents. Work also includes inlet earthworks shaping. Payment includes all labor, materials, shipping, handling, procurement, equipment, and all other incidental work.
- j. Install 300 mm Clean Out Pipe and Fittings for LCS System. Careful transport of pipe from laydown area, inspection of pipe and removal of any debris, welding of pipe segments per Contract Documents, installation of pipe along designated centerline. Also includes installation of all wyes, tees and elbows at specified locations and supply and placement of 25 to 50 mm Round Washed Gravel Pipe Surround to designated configuration, as shown on Drawings. Contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations.
- k. All labour, equipment and materials required to install 600 mm solid pipes through Clay Toe Berm penetrations, including blind flanges. . Pipe length is 69 m. Careful transport of pipe from laydown area, inspection of pipe and removal of any debris, welding of pipe segments per Contract Documents, installation of pipe along designated centerline. Also includes installation of all wyes, tees and elbows at specified locations and supply and temporary securing of pipe in pipe alignment. Contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations
- l. Install 600 mm solid LCS conveyance pipe (LC-1C) from LCSS-1 to LMH0030. Careful transport of pipe from laydown area, inspection of pipe

and removal of any debris, welding of pipe segments per Contract Documents, installation of pipe along designated centerline. Also includes installation of all wyes, tees and elbows at specified locations and supply and temporary securing of pipe in pipe alignment. Contractor is responsible for ensuring that invert elevations of pipe are maintained within 25 mm of specified invert elevations.

#### **3.2.4. Survey, Submittals, Record Drawings and Operation & Maintenance Manuals – SOPQ Item 11**

The Work consists of performing all surveys, measurements, and computations required by the Contract. Verification of survey control points prior to starting Work. Provide field engineering services and close out procedures. Establish locations, elevations, lines, grades and levels necessary for construction of structures and systems, including up to three (3) different layouts and revisions for each construction item as deemed necessary by the Engineer. Locate and mark (stake) in the field all existing utilities. Periodically verify layouts. The construction survey records shall be available at all times during the progress of the Work for examination and use by the Engineer. Complete survey records and supporting data for progress payments shall be submitted to the Engineer with each payment certificate. This item shall also include preparation and submission of record drawings and all sieve, Proctor, Geomembrane Welding and all other QA/QC results as per the Contract Documents

### **3.3. Site Requirements**

**3.3.1. Dust Control** in the work area and on all active haul roads is the responsibility of the Contractor: Water for dust control will be provided by the CRD at the Administration Building, application will be by Contractor. Provisions for dust control must be outlined in the Contractor's Site Specific Silica Exposure Control Plan as part of the Site Specific Safety Plan and up to two (2) 5000L fill-ups will be allowed per hour during normal working hours.

The Contractor is to retain an independent consultant(s) at their expense to monitor, record, and report on silica exposure within their work zone that is compliant with WorkSafeBC regulations.

**3.3.2. Snow and Ice removal:** The Contractor is responsible for all snow clearing and ice control in its work zone and on any haul roads that it requires to progress the work. The Contractor will not be compensated for delays caused by snow or ice removal. Use of salt to mitigate ice or snow must be approved by the CRD Engineer prior to deploying. The CRD limits salt use to the leachate containment areas of the landfill. Areas outside leachate containment are encouraged to use sand/gravel to control ice.

**3.3.3. Road Maintenance:** The Contractor is responsible to maintain all roads within the work zone (Cell 4 and Cell 5A). In addition, the Contractor shall regularly (every 1 – 2 weeks, as required) repair all damage caused by material hauling on Contractor designated hauling routes between the work zone (Cell 4 & 5A) and active storage stockpile (Clay, overburden, shot rock) being built or reclaimed. Any ruts and

potholes must be properly repaired and regraded/redressed to a 1-2% crossfall as directed by the CRD Engineer. The Contractor is responsible to repair any power poles or overhead lines that its equipment has snagged or damaged.

**3.3.4. Temporary Roads:** If the Contractor requires temporary roads to be installed to perform the work, they will construct them at their sole cost using shot rock available onsite. Temporary roads must be removed prior to substantial completion. The Contractor is responsible for all barriers and safety features on any temporary and permanent roads within the work area to complete the work safely, according to WSBC requirements.

**3.3.5. Contractor shall protect all site water monitoring wells to prevent damage to the above and below ground portions of the monitoring wells.** If blasting is required near the monitoring wells, the Contractor to design the blast to prevent damage to the underground portion of the monitoring wells. The Contractor (and its blast consultant) will be responsible for setting a vibration criterion at the wells and show how the blast plan will meet this criterion. Ground water well GW-110-1-1 requires decommissioning before it is removed. The Contractor shall notify the CRD 10 days prior to removal so that the CRD can arrange decommissioning with bentonite. The CRD will conduct the decommissioning. Once completed, the Contractor will remove the monitoring well

### **3.4. Work Sequence And Schedule**

**3.4.1.** Within 14 days of the Notice to Proceed, the Contractor shall mobilize personnel and equipment to manage storm, groundwater and leachate dewatering activities onsite.

- a. Storm Water and blast impacted groundwater collected in PR-1 and PR-2 shall be temporarily conveyed by gravity from PR-1 and PR-2 lines downstream of the Cell 4 Clay Containment Berm to an existing manhole on the 450 mm PVC stormwater sewer. Prior to this temporary line being in place, the Contractor shall be responsible for pumping all storm water runoff and blast impacted groundwater collected in Heal Basin into the 450 mm PVC or 600 mm HDPE line or the upper leachate lagoon or Storm Sedimentation pond, as directed by the CRD Engineer.
- b. Leachate seepage from Cell 3, and possibly from Cell 2 and Cell 1 shall be intercepted in the PR-3 GCL lined collector and conveyed by gravity into the 600 mm HDPE leachate line at the new tie in manhole, as shown on the Drawings. Prior to all permanent collectors being constructed, the Contractor shall be responsible for pumping all leachate and leachate impacted groundwater collected at the north toe of Cell 3 and the north toe of Cell 2 into the 600 mm HDPE line, as directed by the Engineer.

**3.4.2.** Construction of Cell 4 must be fully completed by September 30th, 2024.

**3.4.3.** Geosynthetic materials for Cell 4 including GCL, HDPE geomembrane and all

geotextiles shall be purchased and delivered to the work site or to a storage facility in Victoria or the Lower Mainland by June 1, 2024.

- 3.4.4.** All HDPE pipe for the project for Cell 4, including T's, Y's, flanges and other fittings shall be purchased and delivered to the work site or to a storage facility in Victoria or the Lower Mainland by June 1, 2024.
- 3.4.5.** The Pore Pressure Relief System (PRS) piping and drainage blanket (SOPQ items 5, 6, 7 & 8) within the Cell 4 liner footprint area must be completed and written approval received from the CRD Engineer prior to deployment & installation of the Cell 4 Synthetic Liner System by no later than May 1, 2024.
- 3.4.6.** All shot rock currently stockpiled in the Cell 5A area must be crushed and screened to produce the necessary drainage aggregates for this project by August 15, 2024.

### **3.5. Provisional Items Payment Items (not included in Tender prices) - SOPQ Item 12**

- 3.5.1.** SOPQ Item 12.01: The Contractor shall provide their price to source, load, transport, unload, and stockpile (In Clay stockpile #1 and/or #2) Clay at the Hartland Landfill to meet Cell 4 Construction volume requirements. All clay sources must be free of any contaminants and must meet the IL = Industrial Land use contaminant criteria as defined by the BC Contaminated Sites Regulation (CSR) Schedule 3.1 which defines soil chemistry standards for various chemical parameters based on land use. Landfills fall under industrial land use according to the BC CSR. All clay sources must be vetted and approved by the CRD Engineer to ensure it meets BC Contaminated Sites Regulation prior to being admitted onto the site. In addition to contaminant testing, there are performance requirements for the Clay. Contractors will be required to provide data on grain size, moisture content, liquid and plastic limits, proctor, and hydraulic conductivity (less than  $1 \times 10^{-7}$  cm/s). The CRD will also require samples before providing approval. The Number of samples will depend on clay source variability.

**3.5.2.SOPQ Item 12.02:** The CRD uses 50mm minus aggregate for landfilling operations. The CRD requires Tenderers to provide their bulked rate to produce 50mm Minus aggregate from the CRD's shot rock source(s) onsite and stockpile it on the "Triangle 2" Minus Stockpile" denoted on the site plan or in an alternate stockpile as directed by the CRD Engineer on the Hartland Landfill property. The spec for the 50mm minus specification is as follows:

| 50 mm Minus Base |       |       |
|------------------|-------|-------|
| Sieve Size (mm)  | Upper | Lower |
| 50               | 100   | 100   |
| 40               | 100   | 60    |
| 25               | 75    | 40    |
| 12.5             | 40    | 15    |
| 2.5              | 25    | 10    |
| 0.315            | 10    | 5     |
| 0.08             | 5     | 0     |
| 0.05             | 0     | 0     |

**\*\* END OF SECTION \*\***

SCHEDULE 3  
ESTIMATED DESIGN QUANTITIES  
WORKSHEET

This table of estimated design quantities and take-offs is provided by the Engineer to assist Contractors in formulating their lump sum bids and unit rate costs. The material quantities outlined in the table above represent do not account for construction loss (off-cuts) and field fitting etc. The list is not a complete list of all the materials the contractor will require to construct the improvements. The Contractor shall verify quantities and materials to ensure they account for all materials required to meet the final construction requirements for Cell 4. The Tenderer shall refer to the Specifications and Drawings for a description of the work to be involved in each item.

Aggregate and clay soil volumes represent a pure design, compacted volume and do not account for bulking loss during compaction, over excavation during construction, loss, road repair/fill, etc. The Contractor shall develop their own aggregate production volumes to ensure they account for all aggregate and clay soil required to meet the final design surfaces for all of Cell 4 construction.

|   |  |                |        |
|---|--|----------------|--------|
| 5 Cell 4 Final Grading  |  |                |        |
| 5.01  | Drilling, Blasting, Excavation, Haul to Stockpile and Final Smooth Grading (Depths greater than 1.0 m) within PRS Trenches   | m <sup>3</sup> | 9,435  |
| 5.02  | Shallow Rock Excavation using Ripping and Pneumatic Breakers (Depths less than 1.0 m) from Quarry Floor  | m <sup>3</sup> | 1,631  |
| 5.03  | Crush, Screen, Load, Haul, Place 75-150 mm Drain Rock in designated fill areas on Quarry Floor to reach design subgrade elevation                                  | m <sup>3</sup> | 1,745  |
| 5.04  | Loose Fill Excavation and Haul to Designated Stockpile Area (depths Variable) from Historic Stock Pile Areas   | m <sup>3</sup> | 7,048  |
| 5.05  | Subgrade Grading, Picking, Smoothing and Proof Rolling   | m <sup>2</sup> | 29,221 |
| 5.06  | Grading Fill in Stockpile Area to Support 140 m Bench Road   | m <sup>3</sup> | 965    |
| 5.07  | Deep Excavation and Backfill for Pipe Install at DMH-0025  | m <sup>3</sup> | 341    |
| 6 Clay Seals and Key Trenches                                     |  |                |        |
| 6.01  | Shot Rock Excavation for South Clay Seal   | m <sup>3</sup> | 1,200  |
| 6.02  | Compacted Clay Seal Placement on Quarry Floor in South Clay Seal and North Clay Seal   | m <sup>3</sup> | 1,800  |
| 6.03  | Excavate PR3 Key Trench  | m <sup>3</sup> | 360    |
| 6.04  | Place and Compact PR3 Clay Key Trench for first 90 m of collector  | m <sup>3</sup> | 360    |
| 6.05  | Excavate Toe Berm Key Trench for Clay Isolation Berm to Solid Bedrock  | m <sup>3</sup> | 180    |
| 6.06  | Place and Compact Clay in Toe Berm Key Trench Compact to min 95% MMPD in 300 mm lifts  | m <sup>3</sup> | 180    |
| 7 Clay Toe Berm   |  |                |        |
| 7.011   | Load Haul Place and Compact Clay to Construct Clay Isolation Berm. Compact to min 95% MMPD in 300 mm lifts   | m <sup>3</sup> | 4,437  |
| 7.012   | Construct Pipe Penetrations  | each           | 6      |
| 7.013   | Supply and Install Erosion Control Blanket   | m <sup>2</sup> | 1,425  |
| 7.014   | Crush, Screen, Load, Haul, and Place 2.0 m thickness of 12.5 mm Screen Reject  | m <sup>3</sup> | 1,540  |
| 8 Pore Pressure Relief System                                     |  |                |        |
| 8.01 Production and Placement of PRS Aggregates                   |  |                |        |
| 8.011   | Crush , Screen, Load, Haul, Place 75-150 mm Drain Rock on PRS-1, PRS-1A, PRS-1B, PRS-2 and PRS-3 alignment and PRS sump surround (excludes 300 mm over liner area) | m <sup>3</sup> | 1,410  |
| 8.012   | Crush, Screen, Load, Haul, Place 300 mm Thick 75 – 150 mm Clear Crush Over Liner Area (includes PRS Trenches)  | m <sup>3</sup> | 8,766  |
| 8.013   | Crush, Screen, Load, Haul, Place 300 mm Thick 25 – 75 mm Clear Crush Over Liner Area (includes PRS Trenches)   | m <sup>3</sup> | 8,766  |
| 8.014   | Install pre-purchased 8 oz. Non-woven Geotextile Separation Layer  | m <sup>2</sup> | 29,221 |
| 8.015   | Crush, Screen, Load, Haul Place 200mm Thick Minus 12.5mm Screen Reject for Lower Liner Cushion   | m <sup>3</sup> | 5,844  |
| 8.016   | Crush, Screen Minus 12.5mm Screen Reject for 100 mm Pipe Bedding along all PRS Pipes   | m <sup>3</sup> | 292    |
| 8.02 Procurement and Delivery of PRS Piping                       |  |                |        |
| 8.021   | Supply 300 mm DR 11 HDPE Solid Pipe for PRS  | LM             | 729    |
| 8.022   | Supply 300 mm DR 11 HDPE Perforated Pipe for PRS   | LM             | 564    |
| 8.023   | Supply 300 mm Wyes (45) for PRS  | each           | 2      |
| 8.024   | Supply 300 mm Tees for PRS   | each           | 1      |
| 8.025   | Supply 300 mm 22.5 Elbows for PRS  | each           | 5      |
| 8.026   | Supply 300 mm 45 Elbows for PRS  | each           | 8      |
| 8.027   | Supply 300 mm Valve Assembly   | each           | 3      |
| 8.028   | Supply PRS Precast Concrete 1500 mm dia Sump Drywell Rings come complete with Biaxial Geogrid Wrap, precast bottoms and lids.                                      | each           | 3      |
| 8.029   | Supply 25 to 50 mm Round Washed Stone for PRS Pipe Surround  | m <sup>3</sup> | 1,715  |
| 8.03 Installation of PRS System Piping                            |  |                |        |
| 8.031   | Install Geosynthetic Clay Liner (GCL) for Bottom of PRS-1 Collector between 1+50 and 2+20 on PRS-1   | m <sup>2</sup> | 2,100  |
| 8.032   | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 oz Geotextile Separation Layer for PRS1, PRS1-A, PRS1-B and PRS-2                                | LM             | 1,194  |
| 8.033   | Install Pre Purchased Groundwater Collector Pipe and Fittings (Perforated 300mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-1, PRS-1A, PRS-1B and PRS-2  | LM             | 427    |
| 8.034   | Install Pre Purchased Groundwater Collector Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-1, PRS-1A, PRS-1B and PRS-2      | LM             | 65     |
| 8.035   | Install Pre Purchased Geosynthetic Clay Liner (GCL) for Bottom of Collector between 0+00 and 1+00 on PRS-3   | m <sup>2</sup> | 1,920  |
| 8.036   | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 Oz Geotextile Separation Layer for PRS-3   | LM             | 329    |
| 8.037   | Install Pre-Purchased Groundwater Collector Pipe and Fittings (Perforated 300mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-3                            | LM             | 137    |
| 8.038   | Install Pre-Purchased Groundwater Collector Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on PRS-3                                | LM             | 11     |
| 8.039   | Install PRS and LCS System Drainage Aggregates Between Stations 0+00 and 0+160 on PRS/LCS 3  | LM             | 148    |
| 8.040   | Install Temporary 300 mm HDPE DR 11 Solid Pipe tie-in to DMH0030 on 600 mm HDPE Line   | LM             | 181    |
| 8.041   | Supply and Install 300mm solid HDPE DR 11 Clean-out structure c/w blind flange and SS bolts and Lock Block   | LM             | 5      |
| 8.042   | Install PRS Precast Concrete 1500 mm dia Drywell Sump c/w Biaxial Geogrid Wrap at PRS1, PRS2 and PRS3  | LM             | 3      |
| 8.043   | Install Pre-Purchased Cleanout Pipe and Fittings (Solid 300 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on three PRS1 and PRS2 Cleanout lines                | LM             | 216    |
| 8.044   | Install Temporary 300 mm HDPE DR 11 Solid Pipe tie-in from PR1 Wye to Existing DMH0025 on 450 mm PVC Line  | LM             | 146    |
| 8.045   | Install Temporary 300 mm HDPE DR 11 Solid Pipe connections from PRSS-1 and PRSS-2 to PRS1 Wye and to existing Heal Basin Clean Out                                 | LM             | 110    |
| 9 Cell 4 Liner System Procurement and Installation                |  |                |        |
| 9.01 Procure and Deliver Synthetic Liner System                   |  |                |        |
| 9.011   | Supply White, 60mil thick, Double-textured, HDPE Geomembrane   | m <sup>2</sup> | 29,221 |
| 9.012   | Supply Geosynthetic Clay Liner (GCL) (includes GCL for PRS-1 and PRS-3 Trench Lining)  | m <sup>2</sup> | 32,341 |
| 9.013   | Supply 8 oz Non Woven Geotextile   | m <sup>2</sup> | 58,442 |
| 9.014   | Supply 12 oz Non Woven Geotextile (include 12 oz Geo for PRS and LCS bedding and surround separation)  | m <sup>2</sup> | 38,837 |
| 9.02 Install Synthetic Liner System                               |  |                |        |
| 9.021   | Place and Install pre-purchased Geosynthetic Clay Liner (GCL)  | m <sup>2</sup> | 29,221 |
| 9.022   | Install Pre-Purchased White, 60 mil thick, Double-textured, HDPE Geomembrane   | m <sup>2</sup> | 29,221 |
| 9.023   | Install pre-purchased 12 oz. Non-woven Geotextile - Cushion Layer above Liner  | m <sup>2</sup> | 29,221 |
| 9.024   | Supply and Install Liner Penetration Boots   | each           | 6      |
| 9.025   | Geomembrane Anchor Trench c/w 12 oz Non-woven Wrap Around Liner End, Warning Tape and Minus 12.5 mm Screen Reject Backfill   | LM             | 550    |
| 9.026   | Crush, Screen Minus 12.5 mm Screen Reject for Anchor Trench  | m <sup>3</sup> | 550    |
| 9.027   | Supply and Install Bentonite Cliff Edge Seal   | LS             | 1      |
| 9.03 Install Above Liner Leachate Collection System Aggregates    |  |                |        |
| 9.031   | Crush, Screen, Load, Haul, Place 200mm Thick Minus 12.5mm Screen Reject Upper Cushion  | m <sup>3</sup> | 5,844  |
| 9.032   | Install pre-purchased 8 oz. Non-woven Geotextile Separation Layer  | m <sup>2</sup> | 29,221 |
| 9.033   | Crush, Screen, Load, Haul, Place 500 mm Thick 25-75mm Coarse Drain Rock Leachate Collection Layer  | m <sup>3</sup> | 14,611 |
| 9.034   | Crush, Screen, Load, Haul, Place 200 mm Thick 12.5-25mm Clear Crush Gravel Leachate Filter Layer   | m <sup>3</sup> | 5,844  |
| 9.035   | Crush, Screen Minus 12.5mm Screen Reject for 100 mm Pipe Bedding along all LCS Pipes   | m <sup>3</sup> | 350    |
| 9.036   | Crush, Screen, Load, Haul, Place, 75-150 mm Drain Rock on LCS-1, LCS-1A, LCS-1B, LCS-2 and LCS-3 alignment and LCS sump surround (excludes 500 mm over liner area) | m3             | 1,373  |
| 10 Cell 4 Leachate Collection System Procurement and Installation |  |                |        |
| 10.01 Procure and Deliver Leachate Collection System Piping       |  |                |        |
| 10.011  | Supply 300 mm DR 11 HDPE Solid Pipe for LCS Cleanouts  | LM             | 230    |
| 10.012  | Supply 600 mm DR 11 HDPE Solid Pipe for LCS  | LM             | 390    |
| 10.013  | Supply 600 mm DR 11 HDPE Perforated Pipe for LCS   | LM             | 572    |
| 10.014  | Supply 600 mm Wyes (45)  | each           | 2      |
| 10.015  | Supply 600 mm Tees   | each           | -      |
| 10.016  | Supply 600 mm 22.5 Elbows  | each           | 2      |
| 10.017  | Supply 600 mm 45 Elbows  | each           | 5      |
| 10.018  | Supply Materials for LCS Clean Out Structures including Lock Blocks, Blind Flanges, Sampling Spiggots and Fittings   | each           | 6      |
| 10.019  | Supply 600 mm Valve Assembly   | each           | 1      |
| 10.020  | Supply LCS Precast Concrete 1500 mm dia Sump Drywell Rings come complete with Biaxial Geogrid Wrap, precast bottoms and lids.                                      | each           | 6      |
| 10.021  | Supply 25 to 50 mm Round Washed Stone for LCS Pipe Surround  | m <sup>3</sup> | 1,915  |
| 10.02 Install Leachate Collection System                          |  |                |        |
| 10.021  | Install Pre-Purchased Leachate Collector Pipe and Fittings (Perforated 600mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-3                               | LM             | 138    |
| 10.022  | Install Pre-Purchased Leachate Collector Pipe and Fittings (Solid 600 mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-3                                   | LM             | 10     |
| 10.023  | Supply and Install New Manhole LMH0030 (1500 mm Solid Rings with Explosion Proof Lid) on existing 600 mm HDPE Gravity Sewer  | each           | 1      |
| 10.024  | Load, Haul, Place Minus 12.5 mm Screen Reject Pipe Bedding and 12 Oz Geotextile Separation Layer   | LM             | 962    |
| 10.025  | Install Pre Purchased Leachate Collector Pipe and Fittings (Perforated 600mm DR11 HDPE and 25 to 50 mm Round Washed Gravel) on LCS-1,LCS-1A, LCS-1B and LCS-2      | LM             | 434    |
| 10.026  | Install Pre Purchased Leachate Collector Pipe and Fittings (Solid 600 mm DR11 HDPE) on LCS-1, LCS-1A, LCRS-1B and LCS-2  | LM             | 52     |
| 10.027  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) between LCS-2 and LCS-1 and Between LCS-3 and LCS-1 (include required trenching)           | LM             | 84     |
| 10.028  | Install LCS Precast Concrete 1500 mm dia Sump-Drywell c/w Biaxial Geogrid Wrap   | each           | 3      |
| 10.029  | Install 600 mm Cleanout Assembly including Lock blocks   | each           | 6      |
| 10.030  | Install pre purchased 300 mm LCS Clean Out Pipes   | LM             | 230    |
| 10.031  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) Berm Penetrations for LCSS-2 and LCSSS-3   | LM             | 69     |
| 10.032  | Install Pre Purchased Leachate Connection Pipe (Solid 600 mm DR11 HDPE) from LCSS1 to DMH0030  | LM             | 175    |
| Total Aggregate Production, Soil and Stone Design Quantities      |  |                |        |
| Clay Soil - Owner Supplied  |  | m <sup>3</sup> | 6,777  |
| 25 to 50 mm Clear Round Washed Stone - Contractor Supplied        |  | m <sup>3</sup> | 3,630  |
| Minus 12.5 mm Screen Reject - Aggregate Production                |  | m <sup>3</sup> | 14,421 |
| 12.5 to 25 mm Clear Crush -Aggregate Production                   |  | m <sup>3</sup> | 5,844  |
| 25 to 75 mm Clear Crush - Aggregate Production                    |  | m <sup>3</sup> | 23,377 |
| 75 to 150 mm Clear Crush - Aggregate Production                   |  | m <sup>3</sup> | 13,294 |
| Total DR11 HDPE Pipe Design Lengths                               |  |                |        |
| 300 mm solid  |  | LM             | 959    |
| 300 mm perforated   |  | LM             | 564    |
| 600 mm solid  |  | LM             | 390    |
| 600 mm solid  |  | LM             | 572    |

## Section 01 42 16 - Definitions

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. The definitions used within this measurement and specifications document.

#### 1.02 DEFINITIONS

Capitalized terms used in the Specifications have the following meanings. Capitalized terms not otherwise defined have the meanings set out in the Contract, unless the context otherwise requires.

- A. **Activity:** With regard to construction progress schedules, an Activity is an element of work performed during course of Project. Activity normally has expected duration, expected cost, and expected resource requirements. Activities can be divided into tasks.
- B. **Backfill:** Soils placed from the excavated surface to the existing grade.
- C. **Bar Chart (GANTT Chart):** A graphic display of construction progress schedule-related information. In typical bar charts, activities or other Project elements are listed down left side of chart, dates are shown across top, and activity durations are shown as date-placed horizontal bars. Generally, Bar Chart should be derived from commercially available computerized project management system.
- D. **Baseline:** With regard to construction progress schedules, a Baseline is an original approved plan (for Project, Work package, or Activity), plus or minus approved scope changes.
- E. **Bedrock:** Sound and solid masses, or ledges of mineral matter in place and of such hardness and texture that, when it is encountered, cannot be excavated by 3 passes of a ripper tooth mounted on a hydraulic excavator with a bucket curling force of at least 114 kilonewtons (25,700 pounds) and a stick crowd force of at least 116 kilonewtons (26,100 pounds), or 2 passes of a single shank ripper mounted on a Caterpillar D-8 crawler tractor (or equivalent).
- F. **Bentonite Seal:** The material which hydraulically separates the filter pack material from other designated formations or pipe segments.
- G. **Borrow Source:** The source of soil and aggregate used for construction of foundation, pipe embedment, backfill and embankments.
- H. **Builders Lien Act:** The Builders Lien Act is legislation designed for those who have worked on a construction project or supplied material to it, but haven't been paid.

---

Section 01 42 16      Definitions

---

Under this law, they can file a charge against the land which was improved by the work or materials, to secure payment of the money owed to them.

- I. **Clean Fill:** Refers to general material generated from construction activities and excavations that will meet the Contaminated Site Regulation (CSR), Residential High Density (RL<sub>HD</sub>) standard for Environmental Protection. It may include topsoil, dirt, gravel, sand, but it shall be free of plastic, metals, cardboard, fiberglass, household waste, excessive rubble, and all contaminated soils.
- J. **Clear Aggregates:** Materials that have been mechanically screened in order to reduce the number of fines (silt and clay).
- K. **Contaminated Soil:** means soil that contains a hazardous waste, or another prescribed substance in quantities or concentrations not exceeding prescribed risk-based, or site-specific numerical standards, or criteria, or conditions specified within the Environmental Management Act and related regulations for the use on an industrial Site.
- L. **Construction Work Week:** Work days of the week as defined by the Contract and incorporated into the schedule as part of Bar (Gantt) Chart submission.
- M. **Contractor:** A Tenderer whose Tender the Owner has accepted and to whom the Contract has been awarded.
- N. **Contract Documents:** Are the complete set of documents either referred to or contained within the final Contract signed and sealed by the Engineer and Contractor.
- O. **Construction Schedule (or Project Schedule or Detailed Schedule):** A detailed construction progress schedule, based on the Construction Master Plan, but expanded to include sufficient details to enable the Engineer to track the actual construction progress during the performance of the Work. At the minimum, the Construction Schedule shall identify, include, and track all items with a total value in excess of 5% of the total Contract value, and all Milestones as included in the Contract documents.
- P. **Day or Work Day:** Represents any 10-hour day other than Sunday or legal holidays. Unless specified as calendar day, all Contract references shall be subject to the above definition.
- Q. **Drawings:** The graphic and pictorial portions of the Contract.
- R. **Duration:** With regard to construction progress schedules, Duration is number of work periods (not including holidays or other nonworking periods) required to complete activity or another project element. Usually is expressed as workdays or workweeks.
- S. **Earthworks:** Excavation and fill construction as required for the installation of piping and construction roads, ditches, down-chutes and other drainage features.
- T. **Embankment Material:** Material placed on or above existing ground surface (also referred to as fill).

---

Section 01 42 16      Definitions

---

- U.    **Embedment Material:** Material placed in contact with the pipe and/or conduit (and immediately adjacent to) for the purpose of providing structural support. If applicable, the material placed in contact with the pipe for the purpose of providing the porous region for transfer of gas/fluids into the pipe. Unless otherwise specified in the contract documents, the embedment material is classified into three (3) zones of placement as follows:
- a.    Bedding is that material placed from the bottom of the embedment zone to the underside of the pipe.
  - b.    Backfill is the material placed from the bottom of the pipe to the top of the pipe.
  - c.    Cover is that material placed from the top of the pipe to the top of the embedment zone.
- Unless otherwise specified in the contract documents, the bedding and pipe backfill material shall be Clean Fill, free of foreign objects and gravel exceeding 25mm in size.
- V.    **Engineer:** Means the Engineer or other professional who will act as the Owner's agent for the purpose of managing and administering the Contract, who may be an employee of the Owner or an independent consultant engaged by the Owner on its behalf.
- W.    **Filter Pack Material:** The select material surrounding the slotted (or screened) pipe.
- X.    **Final Backfill Material:** Final Backfill Material is classified into three (3) types as follows:
- a.    For pipe, that material placed above the embedment zone to the existing or proposed subgrade.
  - b.    For structures, that material placed above the base of the structure to the existing or proposed subgrade.
  - c.    For vertical gas wells, that select soil material placed from the upper most seal to the surface.
- Y.    **Force Account:** Force account is a payment method used for extra work when the Contractor and the Engineer cannot agree on a unit price or lump sum amount, or if either of those methods are impracticable (1). Force account payments are based on established hourly rates and the quantities of labor, materials, and equipment that are used to complete the work.
- Z.    **Foundation Material:** Foundation Material is classified into three (3) types as follows:
- a.    For pipe, material used to stabilize the trench bottom below the embedment zone when unstable conditions are encountered.

---

Section 01 42 16      Definitions

---

- b. For structures, slabs, manholes, catch basins, and vaults, that material placed from the bottom of the excavated surface to the base of the structure.
  - c. For cover systems, a layer of fine grain (high clay content) soil placed, compacted, and fine graded to allow direct placement of overlying geosynthetic materials
- AA. **Geomembrane:** A very-low permeable synthetic membrane, liner or barrier used to minimize fluid or gas migration in civil engineering works (also referred to as a membrane, liner, flexible membrane liner, or FML).
- BB. **General Conditions:** Conditions of the Contract providing minimum performance requirements for the Contractor. These conditions also include the rights and responsibilities of the Contractor, Engineer, subcontractors and Owner.
- CC. **Geosynthetics:** Products manufactured from polymeric material to be used with geotechnical engineering-related materials as an integral part of civil engineering works. Geosynthetics including membranes, textiles, drainage net, bentonite mat, erosion control matting, and other geo-composites.
- DD. **Geotextile:** A porous permeable textile material (usually synthetic) used with soil, rock, or any other geotechnical engineering-related material to provide filtration, separation, or reinforcement of soils in civil engineering works (also referred to as textile or filter fabric).
- EE. **Health and Safety Plan:** This is the construction safety plan submitted by the Contractor for Owner and Engineer review and is to be implemented during the duration of the Work.
- FF. **Hydro Evacuation (Hydrovac):** The utilization of pressurized water and a vacuum system to expose underground infrastructure. Pressurized water is injected into the ground through a handheld rigid pipe and nozzle. As the soil is liquified, it is extracted with a powerful vacuum and stored in a truck, safely exposing the underground utilities.
- GG. **Liquidated Damages:** Has the meaning set out in the Form of Tender.
- HH. **Master Plan:** With regard to construction progress schedules, a Master Plan is a summary-level schedule that identifies major activities and key Milestones.
- II. **Milestone:** With regard to construction progress schedules, a Milestone is a significant event in project, usually completion of major deliverables, as identified in the Contract.
- JJ. **Municipal Solid Waste (MSW):** Municipal solid waste includes waste from residential, commercial, institutional, light-industrial (i.e. offices), demolition, land clearing and construction sources. It does not include large quantities of hazardous waste, biomedical waste, agricultural waste, motor vehicles or components, or Remediated Contaminated Soil, despite both small quantities and in special cases

---

Section 01 42 16      Definitions

---

larger quantities approved by the Ministry of Environment and Climate Change for landfilling purposes (e.g. asbestos, Remediated Contaminated Soil meeting industrial standards, treated biomedical waste, and small amounts of household and untreated biomedical waste generated by households.

- KK. **Notice of Award:** Has the meaning set out in the Form of Tender.
- LL. **Notice to Proceed:** Has the meaning set out in the Form of Tender.
- MM. **Owner:** The Capital Regional District located in British Columbia, Canada.
- NN. **Payment Certificate:** The Payment Certificate is certification by the Contractor that a construction contract or a portion thereof, has been fully completed. It is issued at the discretion of the Engineer when a portion of the Work is complete and a reasonable period has passed confirming satisfactory construction which has the effect of releasing all remaining money for that portion of the Work due to the Contractor, including any remaining retention.
- OO. **Prime Contractor:** Has the meaning set out in the Form of Tender.
- PP. **Product:** Means new material, machinery, components, equipment, fixtures, and systems forming the work. It does not include machinery and equipment used for preparation, fabrication, conveying, and erection of the work.
- QQ. **Progress Claim:** A progress claim is an invoice from the Contractor to the Owner for the work completed on Site by the Contractor. Contractors will typically charge the progress claim when main components of the Work have been completed.
- RR. **Project Planning, Monitoring and Control System:** With regard to construction progress schedules, the overall system operated by the Engineer to enable monitoring of project Work in relation to established Milestones.
- SS. **Rock:** Sound and solid masses, or ledges of mineral matter in place and of such hardness and texture that, when it is encountered, cannot be excavated by 3 passes of a ripper tooth mounted on a hydraulic excavator with a bucket curling force of at least 114 kilonewtons (25,700 pounds) and a stick crowd force of at least 116 kilonewtons (26,100 pounds), or 2 passes of a single shank ripper mounted on a Caterpillar D-8 crawler tractor (or equivalent).
- TT. **Refuse:** Manmade or naturally occurring waste products disposed of as part of landfill operations, as determined by the Owner or Engineer. This may include materials referred to as Municipal Solid Waste (MSW) or Demolition and Land Clearing and Construction (DLC) materials.
- UU. **Schedule of Quantities and Prices:** Mentioned in Section 01 20 00 - Measurement and Payment, the Schedule of Quantities and Prices is a table of quantities and prices for all individual items included in the Contract.
- VV. **Site:** The Site is located at the Hartland Landfill at 1 Hartland Avenue in Victoria, B.C. and is comprised of Phase 1 and Phase 2 Landfills.

---

Section 01 42 16      Definitions

---

- WW. **Specifications:** Specifications consisting of the written requirements and standards for products, systems, workmanship, quality, and the services necessary for the performance of the Work
- XX. **Subgrade:** The final surface prepared by the Contractor (e.g. proof-rolled, picked, etc.) and approved by Engineer. Includes the final grading after the earth work and compaction, but before the placement of any individual defined layers (i.e. geosynthetics, gravels, etc.)
- YY. **Substantial Performance:** Means when a Certificate of Completion is issued under section 7 of the Lien Act stating that work under a contract or subcontract has been completed.
- ZZ. **Unstable Trench Bottom:** The trench bottom shall provide adequate support and stable containment of the embedment material so that the density of the embedment material does not diminish.
- a. Unstable conditions include a soft trench bottom that does not provide an adequate working platform or walls that readily slough.
  - b. Unstable conditions also include materials with high organic content, fine grained soils saturated with water in excess of their liquid limit, low density fine sands or silts, and expansive soils such as "fat" clays and certain shales that exhibit a large change in volume with change in moisture content.
  - c. In situ soil is considered stable (for cohesive or granular cohesive soils), if the shear strength as measured in accordance with ASTM D2166 or ASTM D2573 is not less than 500 lbs./ft<sup>2</sup>.
  - d. In situ soil is considered stable (for sands), if the penetration resistance as determined in accordance with ASTM D1586 is not less than 8 blows per foot.
- AAA. **Hartland Landfill:** The landfill located at 1 Hartland Avenue in Victoria, B.C.
- BBB. **Washed Aggregates:** Materials that have been washed in order to eliminate fines (silt and clay).
- CCC. **Work:** Means the total construction and related services including all labour, materials, equipment related to the development of the project specified in the Contract Documents and related amendments. The Work will occur within, and immediately adjacent to, the active and closed areas of the Site.

**PART 2 PRODUCTS**

Not Used

**PART 3 EXECUTION**

Not Used

Section 01 42 16      Definitions

---

**\*\* END OF SECTION \*\***

---

## Section 01 14 00 - Work Restrictions

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This section addresses restrictions and Owner requirements while setting up, leaving the Site, and proceeding with the Work.

#### 1.02 COMMUNICATIONS

- A. All matters of the Contract performance as specified throughout the Contract Documents following Contract award will require the approval of the Engineer as the representative of the Owner.
- B. All decision-making associated with Contract performance must include the Engineer to ensure all Contract compliance reporting is certified in a way consistent with the requirements of Engineers and Geoscientists of BC.
- C. All Contract relevant matters and decisions carried out without the involvement of the Engineer must be reported to the Engineer in writing within 24 hours.

#### 1.03 ACCESS AND EGRESS

- A. Design, construct, and maintain temporary "access to" and "egress from" Work areas, including stairs, runways, ramps or ladders and scaffolding, independent of finished surfaces and in accordance with relevant municipal, provincial, and other regulations.

#### 1.04 TIME RESTRICTIONS

- A. The landfill shall remain open to accept refuse from 7:00 a.m. to 5:00 p.m., Monday to Friday and 7:00 a.m. to 2:00 p.m., Saturday, 52 weeks per year excluding statutory holidays. The Contractor shall not construct the landfill on the following Statutory Holidays or any other day which, during the life of the Contract, may be declared as a Statutory Holiday by the provincial or federal governments. The Owner will supply the schedule of Statutory Holidays to the Contractor

|                |              |                  |
|----------------|--------------|------------------|
| New Year's Day | Victoria Day | Thanksgiving Day |
| Family Day     | Canada Day   | Remembrance Day  |
| Good Friday    | BC Day       | Christmas Day    |
| Easter Sunday  | Labour Day   | Boxing Day       |

There is to be no customer traffic on site prior to 7:00 a.m. and the Contractor is to refrain from operating their equipment prior to 6:30 a.m. or 5:15 p.m. each day unless special arrangements to stay longer have been arranged with the CRD Engineer. All

---

Section 01 14 00      Work Restrictions

---

Contractor and Subcontractor employees and personnel shall sign-out and be offsite no later than 5:30pm Monday – Friday and 2:00pm on Saturday, unless special arrangements have been made with the CRD Engineer.

- B. The Contractor's work hours and schedule will be coordinated with the Engineer and Owner.
- C. All Contractor required road closures must be coordinated with the CRD Engineer at least 2 business days in advance. The CRD will make all efforts to accommodate the road closure by re-routing site traffic for a designated, agreed upon period. The Contractor must post all road closure and re-routing traffic signs and take the signs down once work is complete.

1.05 USE OF SITE AND FACILITIES

- A. Execute Work with the least possible interference or disturbance to normal use of premises. Make arrangements with Engineer to facilitate Work as stated.
- B. Unless approved in writing by Engineer, the Contractor shall not proceed with any Work that is in breach of the Contract Documents (including and not limited to Work without approved submittals, approved survey data, scheduled outside of the approved Construction Schedule, etc.)
- C. Maintain existing access and services to Site and provide for personnel and vehicle access.
- D. Where security is reduced by Work provide temporary means to maintain security.
- E. At the completion of the project, all areas impacted by construction activities, shall be reinstate to their original condition, as solely determined by Engineer.
- F. During the execution of the Work, all areas impacted by construction activities, including roads, stockpile areas, ditches, and all other infrastructure in use, shall be maintained as originally encountered. The Contractor shall implement such measures as requested by the Engineer, including scraping, sweeping, dredging, excavating, and all other cleaning activities, at no additional cost to the Owner. Failing to implement such measures requested by Engineer, may result in Owner performing the work, at the Contractor's cost.

1.06 EXISTING SERVICES

- A. The Contractor is responsible for contacting all respective utility owners to gain approval for any interventions and/or locating all existing utilities before commencing work as best as possible. The Hydrovac system shall be used to excavate, locate and when working in the vicinity of known existing infrastructure to avoid damaging such infrastructure; however, in such instances, the Contractor is responsible for having a contingency plan in place to restore service in consultation and approval of the utility owner. The Contractor is responsible to repair any existing infrastructure caused during the course of excavation.

---

Section 01 14 00      Work Restrictions

---

- B. Notify Engineer, affected businesses, and utility companies of intended interruption of services and obtain required permission from the Engineer in writing. The Work may involve construction adjacent to and over existing gas, water, telephone, sewer and other utilities. The Contractor must obtain the necessary permits and approvals from the utility companies and present to the Engineer prior to starting the Work.
- C. Contractor shall provide a minimum of five (5) working day notice and details to all other existing Site contractors, for all Work expected to interfere, or located in the proximity of the Site facilities or work carried by such contractors.
- D. Where work involves breaking into or connecting to existing services, provide the Engineer 72-hours (3 days) for the necessary interruption of access, mechanical or electrical services throughout course of Work. Keep the duration of such interruptions to a minimum. Carry out interruptions after the normal working hours for all occupants.
- E. Construct barriers in accordance with Section 01 50 00 - Temporary Facilities and Controls.
- F. Provide adequate bridging over trenches and cross roads to permit normal traffic.
- G. Where unknown services are encountered, immediately advise the Engineer and confirm findings in writing.
- H. Protect, relocate or maintain existing active services. When inactive services are encountered, temporarily cap-off in a manner approved by authorities having jurisdiction.
- I. Record in as-built drawings and/or surveys the locations of maintained, re-routed, and abandoned service lines if located in the course of Work.

1.07 SPECIAL REQUIREMENTS

- A. Submit schedule in accordance with Section 01 32 16 – Construction Progress Schedules Bar (Gantt) Chart.
- B. Ensure that Contractor personnel employed on-Site become familiar with and obey regulations including safety, fire, traffic, and security regulations.
- C. Keep within limits of Work and avenues of ingress and egress.

1.08 SMOKING ENVIRONMENT

- A. Comply with smoking restrictions for the Site.

---

**\*\* END OF SECTION \*\***

---

## Section 01 20 00 - Measurement and Payment

---

### PART 1 General

#### 1.01 SECTION INCLUDES

- A. All measured quantities and conditions of the related payments for these elements of the Works.

#### 1.02 MEASUREMENT FOR PAYMENT QUANTITIES

- A. Measurement for payment will be performed by the Contractor according to standard measurement procedures and based on actual units of work performed or installed. The method of measurement is described under each bid item.
- B. The Contractor shall make all interim measurements (including all prep work required for measurement purposes) and determine all interim quantities and amounts of complete Work done under the Contract. At the time, measurements are made for quantity determinations, the Engineer or its representative will be present to verify such measurements.
- C. The Contractor shall provide a minimum 48 hours advanced notice for the date and time of measurements and allow the Engineer the opportunity to observe measurements and/or conduct independent measurements for establishing quantities for progress payments.
- D. Description of Methods for Measurement of Quantities
  - 1. For items specified to be measured by a length unit (e.g. linear or vertical metre), pay length will be measured along the center line of the item involved as actually placed and accepted.
  - 2. When items are specified to be measured by an area unit (e.g., square metre, hectare, etc.), the Engineer will use one of the following methods for measurement:
    - a. For those items to be measured by the in-place area, measurement shall be determined by verified and accepted topographic survey methods or by the most practical means as otherwise determined by the Engineer.
    - b. For those items measured by the in-place area with a neat line measurement for width, the area will be determined by the in-place horizontal measure for length multiplied by the fixed plan dimension for width as shown on the Contract Documents. (i.e. Roads)

---

Section 01 20 00      Measurement and Payment

---

3. For items specified to be measured by a volume unit (e.g. cubic metres), the Engineer will use one of the following methods for measurement:
- a. For those items to be measured by the in-place volume, measurement shall be determined by verified and accepted topographic survey methods. The quantity for payment shall be calculated as a difference between the original ground surface (prior to construction) and the final ground surface (after construction is completed). The volume shall be calculated by a cut and fill analysis using AutoCAD Civil 3D software. For volumes of excavation or embankment which are small or otherwise, impractical to measure quantities by a cut and fill analysis, an average-end-area method shall be used as specified by the Engineer.
  - b. For those items measured by the in-place area with a neat line measurement for depth, the volume will be determined by the in-place horizontal measure for area multiplied by the fixed plan dimension for depth as shown on the Contract Documents.
  - c. For supply only items, the volume will be determined as the minimum quantity needed to complete the corresponding installation item (where applicable). No additional allowances or payments will be made for installation, transportation, stockpiling or any other loss.
  - d. For those items measured by load counts of the hauling vehicle, the volume will be determined by the dimensions of each hauling vehicle. Each hauling vehicle will be measured by the Contractor to the Engineer's satisfaction to establish the number of cubic metres carried by that vehicle when full. All hauling vehicles shall be numbered or otherwise uniquely marked for identification purposes.

For each load delivered to the Site, the Contractor shall provide to the Engineer at the time of delivery, a ticket indicating the vehicle number or other identification, material type, date, time of delivery, reference to source location, and intended use of material (i.e., subgrade, embankment, backfill, select fill, cover soil, drainage aggregate, drain rock, embedment, etc.)

In addition to vehicle tickets, the Contractor shall provide to the Engineer on a daily basis, a summary of vehicle loads delivered that day listing the number of loads; type of material carried by each vehicle, and intended use of each type of material.

Subsequent loads can be randomly checked as instructed by Engineer, and adjustments will be made for partial loads. Where a discrepancy in the initial vehicle capacity is encountered, the Engineer may elect to adjust all previous load records received to date.

---

Section 01 20 00 Measurement and Payment

---

4. For items specified to be measured by weight, the Engineer will use the following methods for measurement:
  - a. Weight will be determined using commercially available truck scales or as otherwise, approved by the Engineer.
  - b. Scales must meet the requirements of the Weights and Measures Act.
5. Where lump sum is the specified pay unit, the payment will be done as outlined in this specification.

E. CHANGE IN QUANTITIES

1. No adjustments in unit prices will be allowed for changes in quantities listed in the Bid Schedule of Quantities and Prices.
2. The Owner will have no financial obligations (including overhead profit or any type of claimed expenses) to the Contractor due to quantity variations, including the complete removal of select items, either before the Contract award or during the contract implementation.

F. FORMAL PAYMENT APPROVAL

No payment unless formally approved by the Engineer will be made for:

1. Work performed or materials placed outside of limits indicated in the Drawings or established by the Engineer. Includes all overlapping materials that should have been complementary to each other (i.e. topsoil and road materials, 8oz geotextile and ditch rip-rap, etc.)
2. Materials wasted, used, or disposed of in a manner not called for under the Contract
3. Rejected materials (including material rejected after it has been placed, if the rejection is due to the Contractor's failure to comply with the provisions of the Contract). When defects or non-compliance are discovered, the work shall be rejected regardless of any prior approval or payment. The Contractor shall be fully responsible for all repairs and remediations needed to complete the work as originally intended or to the satisfaction of Engineer.
4. Hauling and placement of materials from, or to, interim stockpiles. Stockpiles can be located anywhere on the property, as best suited to Owner's needs, and the Contractor will not be entitled to any additional compensation regardless of the stockpile locations or changes to such location during the contract.

---

Section 01 20 00      Measurement and Payment

---

5. Hauling and disposing of rejected materials. Unless otherwise specified, the Contractor shall include such costs into the most appropriate pay item.
6. Material on hand after completion of Work
7. Any other Work or material when payment is contrary to any provision of the Contract.
8. Work that has been buried and/or concealed without inspection and approval (immediately prior to, and during burying and/or concealment) from the Engineer.
9. Work that has not received the required documentation and approval required through the submittal process.
10. Work that has only been done partially, is not functioning as intended, and without being surveyed, inspected, tested, commissioned, or documented for as-built records.
11. All schedule delays, costs and all other impacts related to repairs and replacements requested by Engineer, due to damage to the existing infrastructure caused by the Contractor through use of mechanical excavation within a 1 metre diameter of the assumed location of existing infrastructure. The Engineer is emphasizing to the Contractor that every care must be taken to avoid damaging all anticipated infrastructure, regardless of the actual location, which may vary due in part to the nature of settlement within the landfill, or the possible poor accuracy of the as-built drawings, or the imprecise instructions by the Engineer or Owners representative. It is required that a non-mechanized form of excavation be used when working within the 1 metre radius of existing infrastructure.

1.03 INSTRUCTIONS REGARDING FORM OF BIDDER

- A. Work completed under this Contract will be paid for at the lump sum prices and unit prices set out in the Schedule of Quantities and Prices.
- B. Include all costs associated with finding, procuring, and supplying all materials and performing all Work specified herein in the prices set out in the Schedule; allow for Contractor's overhead and profit except for Provisional Items which shall be priced as per Contract requirements.
- C. Any claim by The Contractor for extra payment on grounds that Work performed or materials supplied in accordance with the Drawings and/or Specifications could not be properly charged to items listed in the Schedule will not be considered by the Engineer.
- D. If the Schedule of Quantities and Prices does not include an item that is referenced in the Drawings and/or Specifications (by either direct mention and/or implication), the

---

Section 01 20 00      Measurement and Payment

---

Contractor shall include all costs associated with such item in the most appropriate pay item.

- E. Prorate costs of a general nature that do not pertain to any one item among all items except for Provisional Items.
- F. Payment will only be made for actual quantities supplied and installed during the Contract.

#### 1.04 PROGRESS PAYMENTS

- A. The Contractor shall submit an application for Payment monthly in accordance with the General Conditions of the Contract and in a format acceptable to Engineer.
- B. The Contractor shall be responsible to accurately record, and prove, by use of accepted survey records and measurements, that all claimed quantities have been complete, and are conforming with all contractual requirements.
- C. The Owner will in addition, and where reasonably justified, make special payment hold backs as provided for in the General Conditions of the Contract.
- D. With every monthly application for payment, the Contractor shall submit all relevant survey records for the current Progress Claim and a master survey record summary for all completed Work, in a form acceptable to the Engineer. Failing to provide such records, could invalidate the Progress Claim and payment may not be considered.
- E. The Contractor shall provide a Statutory Declaration and a WCB Clearance Letter in accordance with the General Conditions of the Contract for all progress payment certificates except the first one.

#### 1.05 FORCE ACCOUNT WORK

- A. Work may be required which is not covered by the Contract.
- B. All Force Account Work shall be carried out in accordance with the General Conditions of the Contract.
- C. All Force Account Work carried out must have prior written approval from the Engineer. The Contractor shall, for each day, keep an accurate, complete and up-to-date record, in a form satisfactory to the Engineer, showing, on a shift-by-shift basis, all Contractor and Subcontractor labour, equipment and materials to be paid by Force Account. The Contractor shall submit for approval to the Engineer, on a daily basis, all such Force Account reports before the end of the next day following the Work.
- D. If such records are not prepared, submitted or approved as per above, payment may not be considered.

### PART 2    Payment Items

#### Item 1 – Mobilization and Demobilization

---

Section 01 20 00      Measurement and Payment

---

- a. Measurement: Lump sum
- b. Payment: Will be paid as a lump sum value. Fifty percent (50%) of the value will be paid on completion of mobilization to the Site, as determined by the Engineer (when equipment is on Site and functional Site office established), and the fifty percent (50%) balance will be paid when all outstanding deficiencies have been addressed and all structures, materials and equipment have been demobilized from the Site.

**Item 2 – Bonding and Insurance**

- a. Measurement: Lump sum
- b. Payment: Will be paid as a lump sum value after the Contract is signed and the Bonds and Proof of Insurance are submitted to the Owner

**Item 3 – Health and Safety Plan**

- a. Measurement: Lump sum
- b. Payment: Will be made at the lump sum price quoted in the Schedule of Quantities and Prices. One Hundred percent (100%) of the value will be paid after the Health and Safety Plan is received and reviewed by the Engineer, and implemented by the Contractor.

**Item 4 – Groundwater and Leachate Pumping Control**

- a. Measurement: Lump Sum
- b. Payment: Payment will be at tendered lump sum rate and distributed monthly during the dewatering period from start of Contract to June 30, 2024.

**Item 5 – Cell 4 Final Grading**

**Item 5.01 – Drilling, Blasting, Excavation, Haul to Stockpile and Final Smooth Grading (Depths greater than 1.0 m) Within PRS Trenches**

- a. Measurement: Cubic Meter (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

---

Section 01 20 00      Measurement and Payment

---

Item 5.02 – Shallow Rock Excavation using Ripping and Pneumatic Breakers  
(Depths less than 1.0 m) from Quarry Floor

- a. Measurement: Cubic Meter (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed

Item 5.03 – Load, Haul, Place 75-150 mm Drain Rock in designated fill areas on Quarry Floor to reach design subgrade elevation

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 5.04 – Loose Fill Excavation and Haul to Designated Stockpile Area (depths Variable) from Historic Stock Pile Areas

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 5.05 – Subgrade Grading, Picking, Smoothing and Proof-Rolling

- a. Measurement: Lump Sum
- b. Payment: Payment will be made when entire Cell 4 liner surface is inspected and accepted by Engineer

Item 5.06 – Grading Fill in Stockpile Area to support 140 m Bench Road

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 5.07 – Deep Excavation and Backfill for Pipe Install at DH-0025

- a. Measurement: Cubic metre (m<sup>3</sup>)

Section 01 20 00

Measurement and Payment

---

- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

**Item 6 – Clay Seals and Key Trenches**

Item 6.01 – Shot Rock Excavation for South Clay Seal

- a. Measurement: Cubic Meter (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 6.02 – Compacted Clay Seal Placement on Quarry Floor in South Clay Seal and North Clay Seal

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 6.03 – Excavate and Shape PRS3 Key Trench

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 6.04 – Place and Compact PR3 Clay Key Trench Seal for First 90 m of Collector

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

Item 6.05 – Excavate Clay Toe Berm Key Trench to Solid Bedrock

- a. Measurement: Cubic metre (m<sup>3</sup>)

---

Section 01 20 00      Measurement and Payment

---

- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

**Item 6.06 – Place and Compact Clay om Toe Berm Key Trench Seal**

- a. Measurement: Cubic metre (m<sup>3</sup>)
- b. Payment: Will be made on an m<sup>3</sup> basis on surveyed areas. Survey is to be conducted by Contractor and verified by Engineer before and after work is completed.

**Item 7 – Clay Toe Berm**

- a. Measurement: Lump Sum
- b. Payment: Will be made on a lump sum basis when berm is constructed to design grade, properly compacted and inspected / accepted by Engineer. Total clay fill will be 4,437 m<sup>3</sup>. Survey is to be conducted by Contractor to confirm design grades have been achieved and verified by Engineer after work is completed.

**Item 8 – Pore Pressure Relief System**

Item 8.01 – Sub Liner Pore Pressure Relief System layered aggregate drainage blanket including aggregate production, aggregate placement, 8 oz non woven geotextile installation

- a. Measurement: Lump sum
- b. Payment: Monthly progress draws will be based on completed area (m<sup>2</sup>) of the final PRS drainage blanket, ready for liner layer placement. The total lump sum for 8.01 will be prorated over 29,221 m<sup>2</sup> of completed PRS aggregate drainage layer to the top of the 200mm thick 12.5mm screen reject liner cushion area.

Item 8.02 – Procurement and delivery of all PRS piping

- a. Measurement: Lump sum

---

Section 01 20 00      Measurement and Payment

---

- b. Payment: Upon Delivery of all pipe materials onsite or at a storage location, after the CRD is satisfied that all materials are delivered.

**Item 8.03 – Installation of PRS System Piping**

- a. Measurement: Lump sum
- b. Payment: Monthly progress payment shall be made based on installed lineal meters of perforated and solid 300mm pipe including finished aggregate backfill (as required). Total lump sum bid to be prorated over 729 m solid pipe and 564m. perforated 300 mm DR11 HDPE pipe (total meters = 1,293 meters)

**Item 9 – Cell 4 Liner System Procurement and Installation**

**Item 9.01 – Procure and deliver Synthetic liner system including Bentomat DN GCL Supergroove, 60 mil Double-Textured HDPE Geo-membrane & 8 oz. & 12 oz. Non-Woven Geotextile**

- a. Measurement: Lump sum
- b. Payment: Upon Delivery of all liner materials onsite or at a storage location, after the CRD is satisfied that all materials are delivered.

**Item 9.02 – Install Synthetic Liner System**

- a. Measurement: Lump sum
- b. Payment: Monthly progress draws will be based on completed area (m<sup>2</sup>) of the three liner layers (Bentomat DN GCL Supergroove, 60 mil Double-Textured HDPE Geo-membrane & 12 oz. Non-Woven Geotextile), ready for above-liner LCS aggregate drainage blanket placement. The total lump sum for 9.02 will be prorated over 29,221 m<sup>2</sup> of completed liner install.

**Item 9.03 – Install Above Liner Leachate Collection System Aggregates**

- a. Measurement: Lump sum
- b. Payment: Monthly progress draws will be based on completed area (m<sup>2</sup>) of the final LCS drainage blanket, ready for Refuse placement. The total

Section 01 20 00

Measurement and Payment

---

lump sum for 9.03 will be prorated over 29,221 m<sup>2</sup> of completed LCS aggregate drainage layer to the top of the 200mm thick 12.5 – 25 mm clear crush gravel layer.

**Item 10 – Cell 4 Leachate Collection System Procurement and Installation**

Item 10.01 – Procure and Deliver Leachate Collection System Piping

- a. Measurement: Lump sum
- b. Payment: Upon Delivery of all LCS pipe materials onsite or at a storage location, after the CRD is satisfied that all materials are delivered.

Item 10.02 – Install Leachate Collection System

- a. Measurement: Lump sum
- b. Payment: Monthly progress payment shall be made based on installed lineal meters of perforated and solid 600mm (LCS) and 300mm (cleanout) pipe including finished aggregate backfill (as required). Total lump sum bid to be prorated over 390 m solid 600mm pipe and 572m. 600mm perforated and 230 m of 300 mm DR11 HDPE pipe (total meters = 1,192 meters).

**Item 11 – Survey, Submittals, Record Drawings and Operation & Maintenance Manuals**

- a. Measurement: Lump sum
- b. Payment: Payment will be made as a lump sum value. Thirty percent (30%) of the value will be paid at the completion of the Contract after all records and as-built information has been received and accepted by the Engineer. The Seventy percent (70%) balance will be prorated for the duration of the Contract as per Engineer's estimate.

**\*\* END OF SECTION \*\***

---

## Section 01 30 00 - Administrative Requirements

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. All elements to administering the contract through coordination, a pre-construction conference and meetings.

#### 1.02 COORDINATION

- A. Coordinate scheduling, submittals and Work as best suited to Project's needs. Ongoing and special Site operation and previous contracts take precedent when scheduling, submittals and Work conflict.
- B. Coordinate scheduling, submittals and work of the various sections of Specifications to assure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.
- C. Coordinate access into the Site at the Site entrance with the Engineer.
- D. Coordinate all Work on access roads within the landfill with Engineer.
- E. Coordinate Work of various sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.
- F. Coordinate space requirements and installation of mechanical and electrical Work which are indicated diagrammatically on Drawings. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.
- G. Coordinate completion and cleanup of work of separate sections in preparation for substantial performance and for portions of work for use by the Engineer.
- H. After Owner occupancy of the Site, coordinate access to Site for correction of defective Work and Work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

#### 1.03 PRECONSTRUCTION MEETING

- A. The Engineer will schedule a meeting after date of the Contract execution.
- B. Attendance Required: Owner, Contractor, Engineer, major subcontractors, Site tenants, and Site contractors (engaged in other Site contracts that might interfere with the Work).
- C. Agenda:
  - 1. Distribution of Contract Documents

---

Section 01 30 00      Administrative Requirements

---

2. Submission of list of subcontractors, list of products, Schedule of Quantities and Prices, and progress schedule
3. Designation of personnel representing the parties in the Contract and the Owner
4. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, contemplated Change-orders, Change-orders, and the Contract closeout procedures
5. Scheduling
6. Use of premises by Owner and Contractor
7. Owner's requirements
8. Construction facilities and controls provided by Owner
9. Security and housekeeping procedures
10. Procedure for maintaining record documents
11. Contractor Site-specific Health and Safety Plan

1.04 PROGRESS MEETINGS

- A. The Engineer or the Owner will schedule and administer meetings throughout progress of the work every week, or as determined by the Engineer.
- B. Attendance required: project manager, site superintendent, major subcontractors' representatives and suppliers' representatives, Engineer, tenant's representative, and other representatives as appropriate to agenda topics for each meeting.
- C. General items to be included on the weekly agenda:
  1. Review minutes of previous meetings
  2. Safety items and report of any safety related incidents
  3. Review of work progress
  4. Field observations, problems, and decisions.
  5. Identification of problems which impede planned progress
  6. Review of submittals schedule and status of submittals
  7. Review of off-Site fabrication and delivery schedules
  8. Review of design for prior to initial construction of individual components
  9. Review of surveying for construction, progress payments, and as-built documentation

---

Section 01 30 00      Administrative Requirements

---

10. Maintenance of progress schedule
11. Corrective measures to regain projected schedules
12. Planned progress during succeeding Work period
13. Coordination of projected progress
14. Maintenance of quality and Work standards
15. Effect of proposed changes on progress schedule and coordination
16. Other business relating to work

**PART 2 PRODUCTS**

Not Used

**PART 3 EXECUTION**

Not Used

**\*\* END OF SECTION \*\***

---

## **Section 01 32 16 - Construction Progress Schedules**

---

### **PART 1 GENERAL**

#### **1.01 THIS SECTION INCLUDES**

- A. All related elements needed to track progress of the project both for the Engineer and the Contractor.

#### **1.02 REQUIREMENTS**

- A. Ensure the Master Plan and monthly updated Detail Schedules are practical and remain within specified Contract duration.
- B. Plan to complete work in accordance with prescribed Milestones and time frame.
- C. Allow for progress reporting time within the schedule.
- D. Ensure that it is understood that an award of Contract or a Notice to Proceed, rate of progress, a Substantial Performance certificate and a final Substantial Performance certificate as defined times of completion are of essence in this Contract.

#### **1.03 SUBMITTALS**

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Submit a Master Plan to the Engineer within ten (10) working days of award of the Contract. The Master Plan shall be in the form of a Bar (GANTT) Chart for planning, monitoring, and reporting of project progress. The Master Plan shall be submitted to the Engineer in hard copy and in Microsoft Project electronic format.
- C. Submit a Construction Project Schedule (Detailed Schedule) to the Engineer within five (5) working days of Notice to Proceed. The Project Schedule shall be submitted in hard copy and Microsoft Project electronic format.

#### **1.04 MASTER PLAN**

- A. Structure schedule to allow orderly planning, organizing, and execution of work as Bar Chart (GANTT).
- B. Engineer will review and comment on the schedule and return within five (5) working days.
- C. Resubmit revised schedule within five (5) working days.
- D. Accepted revised schedule will become Master Plan and be used as Baseline for updates.
- E. Update Project Schedule and submit to the Engineer with each application for Payment with every progress claim, or as per The Contract requirements

---

Section 01 32 16 Construction Progress Schedules

---

1.05 CONSTRUCTION PROJECT SCHEDULE

- A. Develop a detailed Construction Project Schedule derived from Master Plan.
- B. The Construction Project Schedule must include the minimum Milestone and Activity types noted below:
  - 1. Notice of award
  - 2. Health and Safety Plan, and Traffic Management Plan
  - 3. Mobilization
  - 4. Survey staking and utility locating
  - 5. Completion of each item identified in the schedule of quantities and prices with a value in excess of 5% of the total Contract value
  - 6. Submittal of as-built survey and project record documents
  - 7. Startup, field testing, commissioning, and training
  - 8. Substantial Performance
  - 9. Clean-up and demobilization
  - 10. Total Performance

1.06 PROJECT SCHEDULE REPORTING

- A. Update the Construction Project Schedule on a monthly basis reflecting each activity date, highlighting activity changes and completions, as well as activities in progress. Critical path to be identified and tracked on each Project Schedule update.
- B. Include as part of Project Schedule, narrative report identifying work status to date, comparing current progress to Baseline, presenting current forecasts, defining problem areas, anticipated delays, and impact with possible mitigation.

1.07 PROJECT MEETINGS

- A. Discuss Construction Project Schedule at weekly Site meetings, identify Activities that are behind schedule and provide measures to regain slippage, and include planned Activities for the next three weeks Activities considered behind schedule are those with projected start or completion dates later than current approved dates shown on Baseline schedule.

---

Section 01 32 16      Construction Progress Schedules

---

**\*\* END OF SECTION \*\***

---

## Section 01 33 00 - Submittal Procedures

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Steps for documentation and procedures to minimize delays and ensure strong communications.

#### 1.02 SUBMITTAL PROCEDURES

- A. Submittals must be presented in the format acceptable to and approved of in advance by the Engineer.
- B. Accompany each submittal with a letter of transmittal showing all information required for identification and tracking. Identify project, the Contractor, Subcontractor or supplier; pertinent Drawing sheet and detail number(s), and Specification section number, as appropriate.
- C. On at least the first page of each submittal, and elsewhere as required for identification, show the submittal number to which the item belongs.
- D. Number the transmittal forms and corresponding submittals sequentially. Number each resubmittal using the original submittal number and an alphabetic suffix. For example, the first resubmittal of submittal 3 would be number 3A. Resubmittals shall be transmitted with a new letter of transmittal, and shall cite the original submittal number for reference.
- E. Submit the number of copies of shop drawings and data required to be returned, plus four (4) copies to be retained by the Engineer. Prior to each submittal, carefully review and coordinate all shop drawings and data furnished by suppliers and subcontractors for accuracy and for conformance with requirements of the Specifications.
- F. Identify variations from Specifications and products that would benefit the Owner and the completed work and highlight the advantages of such products. Any request to substitute an alternate product must be submitted to the Engineer in writing as part of the tender documents and shall include complete product specifications addressing all Specifications outlined within this section and the benefits to the Owner resulting from the substitution.
- G. Submittals shall clearly show drawings, sketches, catalog cuts, or letters from supplier which demonstrate compliance with the specific requirements of the Specifications. If compliance is not clearly demonstrated, the submittal will be rejected.
- H. Data and information included in each specification shall indicate the guaranteed performance, predicted performance, interface requirements, and construction features of all Contractor-furnished materials and equipment. The accuracy of such

---

Section 01 33 00 Submittal Procedures

---

information and the compatibility of such information with overall performance requirements specified by the Engineer shall be the sole responsibility of the Contractor.

- I. Provide space for the Owner and Engineer to review comments, signature and/or stamps.
- J. Revise and resubmit submittals as required, clearly identifying all changes made since previous submittal. The Contractor is solely responsible for producing and submitting accurate and relevant submittals. The Engineer will review and respond to a maximum of two revisions for each submittal before a decision is reached.
- K. Distribute copies of reviewed submittals to concerned parties. Instruct parties to promptly report any inability to comply with provisions.
- L. Make submittals of shop drawings, samples, substitution requests, and other items in accordance with the provisions of this section.
- M. Apply Contractor's stamp, signed or initialed certifying that review, verifications or products required, field dimensions, adjacent construction Work, and coordination of information, is in accordance with the requirements of the work and Specifications.
- N. Make submittals in groups containing all associated items. Partial submittals will be rejected as not complying with provisions of the Specifications.
- O. Submittals shall be scheduled to expedite the Project. Deliver submittals to Engineer at his/her business address, unless otherwise directed. Coordinate submission of related items. Make submittals far enough in advance of scheduled installation dates to provide adequate time for reviews, for shipping time between parties, for securing necessary approvals, for possible revisions and resubmittal, and for placing orders and taking delivery of materials.
- P. If not otherwise noted in the Contract, allow at least ten (10) working days for review by the Engineer following receipt of the submittal by the Engineer. Each rejected or returned for revision version of submittals shall be subject to an additional ten (10) working days review period by the Engineer. The Contractor shall schedule the submittal delivery to allow for Engineer's review period including any potential revisions.

#### 1.03 CONSTRUCTION PROGRESS SCHEDULES

- A. Submit revised schedules with each application for payment, identifying changes since previous version.
- B. Indicate estimated percentage of completion for each item of work at each submission.

#### 1.04 SHOP DRAWINGS

- A. General

---

Section 01 33 00 Submittal Procedures

---

1. Coordinate and check all shop drawings furnished by Suppliers and subcontractors for accuracy and for conformance with requirements of the Specifications.
- B. Drawings and Transmittals
1. General
    - a. Supply all drawings, data sheets, performance curves, test reports, and instruction manuals as specified herein.
    - b. The drawings and data submitted shall include sufficient detail and clarity to enable the Engineer to determine that the proposal or design, is in compliance with the Specifications. If standard drawings and/or standard published descriptive data are submitted, any modifications required and intended by the Contractor to meet the requirements of each Specification shall be clearly indicated.
    - c. Data and information included in each specification shall indicate the guaranteed performance, predicted performance, interface requirements, and construction features of all Contractor-furnished materials and equipment. The accuracy of such information and the compatibility of such information with overall performance requirements specified by Engineer shall be the sole responsibility of the Contractor.
  2. Design Submittals
    - a. Submit drawings, data, and other required information within the specified time limit.
    - b. The following drawing requirements shall be met:
      - 1) All measurements shall be in S.I. Metric units. U.S. units may be provided within parenthesis. All writing shall be in English.
      - 2) Drawing size shall not exceed ANSI D size (22-inch x 34-inch).
      - 3) Preliminary drawings shall be reproducible AutoCAD and Adobe Reader type for sizes greater than ANSI B size (11-inch x 17-inch).
      - 4) Final (certified) drawings shall be AutoCAD and Adobe Reader type.
      - 5) Final (certified) drawings shall be marked as "CERTIFIED" with an accompanying signature and date.
      - 6) When a drawing is revised, a revision number shall be clearly displayed in or near the title block. Current revisions shall be so indicated by circling the affected portions of the drawing.
    - c. Furnish certified general arrangement drawings and outline drawings showing all major equipment, component parts and accessories, assembly,

---

Section 01 33 00      Submittal Procedures

---

all interface connections to related equipment, disassembly clearances and magnitude of permissible reaction forces and moments at major pipe connections of equipment, and equipment center of gravity.

- d. Furnish certified detailed drawings to enable Engineer to verify design of foundation, supports, and equipment interfacing. Connection-points and foundation drawings shall be fully dimensioned. Connection details shall be fully identified. Drawing information shall include as a minimum:
  - 1) Component and auxiliary system equipment, flow diagrams including instrumentation, pipe, and valve arrangement drawings
  - 2) Foundation loading, pipes and valves loading, and clearance dimensions including magnitude and direction of loads for all load cases
  - 3) Anchor bolt and embedded parts size, location, and details
  - 4) Pipe and conduit sleeve sizes and locations
  - 5) Certified wiring diagrams, interconnection wiring diagrams
  - 6) Instrument board, cabinet and panel layout, and terminal identification drawings and diagrams
  - 7) Wire and cable designation drawings
  - 8) Control logic diagrams
  - 9) Materials designations shall be indicated on assembly drawing
  - 10) Complete process flow and instrumentation drawings
- e. Provide adequate certified information covering installation, operation and maintenance requirements. As a minimum the following information shall be furnished.
  - 1) Installation and erection drawings and details; including, and not limited to welding and/or bolting specifications and extent of field Work required
  - 2) Operating, maintenance, and repair (Instruction) Manuals
  - 3) Insulation and lagging requirements
  - 4) Record of all clearances, tolerances, and other pertinent data required for installation
  - 5) Foundation, load and anchorage detail requirements
  - 6) List of loose instruments, instrument panels, pipe, tubing, and accessories
  - 7) Erection procedures

---

Section 01 33 00      Submittal Procedures

---

- 8) Estimated total weight of components shipped fully assembled
- 9) Shipping Splits: Approximate weight and size of major pieces
- 10) Field assembly requirements of components (i.e., bolted or welded, linear metre (feet) of field weld, if applicable, etc.)

C. Technical Data

- 1. Provide certified data, including graphs, curves, and other pertinent information for the materials, equipment, and machinery. Technical data shall include the following:
  - a. A signed Certified of Compliance stating the following:
  - b. "All Work provided under this Specification complies with all requirements of this Specification and accepted deviations."
  - c. Data Sheets (pumps, motors, valves, fans, louvers, etc.)
  - d. Documents identifying deviations and their acceptance
  - e. Manufacturer's Data Report for CSME Code (or ASME Code) stamped items
  - f. Materials Test Reports where required by governing Codes or Standards
  - g. Non-destructive examination procedures and results
  - h. Shop Test results
  - i. Field Test results
  - j. Electrical Test results
  - k. Welding procedures
  - l. Records of all major weld repairs and related processing and examination
  - m. A complete list of all special tools and gauges of custom manufacture necessary to overhaul, operate, adjust, or maintain equipment

1.05 PRODUCT DATA

- A. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to this Project.
- B. After review, distribute in accordance with paragraph 1.04 of this section. Where the contents of submitted manufacturer's literature include data not pertinent to the submittal, clearly indicate which portions of the contents are being submitted for review.

1.06 SAMPLES

---

Section 01 33 00      Submittal Procedures

---

- A. Submit samples to illustrate functional and aesthetic characteristics of the Product, with integral parts and attachment devices. Coordinate sample submittals for interfacing Work.
- B. Submit samples of finishes from the full range of manufacturers' standard colors, textures, and patterns for Engineer's selection.
- C. Identify each sample and include full Project information with each sample.
- D. One sample will be retained by Engineer.

**1.07 MANUFACTURER'S INSTRUCTIONS**

- A. When specified in individual specification sections, submit manufacturers' printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, in quantities specified for Product Data.
- B. Identify conflicts between manufacturers' instructions and Contract Documents.
- C. All manufactured articles, materials, and equipment shall be applied, installed, connected, erected, used, cleaned and conditioned in strict accordance with manufacturer's printed directions, unless otherwise specified. Furnish bound copies of manufacturer's printed specifications for installation, use or maintenance to Engineer.

**1.08 MANUFACTURER'S CERTIFICATES**

- A. When specified in individual specification sections, submit manufacturer's certificate to Engineer for review, in quantities specified for Product Data.
- B. Indicate material or product conforms to or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
- C. Certificates may be recent or previous test results on material or Product, but must be acceptable to Engineer.

## Section 01 42 19 - Reference Standards

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. The sources of the criteria to be met in terms of product quality and workmanship.

#### 1.02 QUALITY ASSURANCE

- A. For products or workmanship specified by association, trade, or Federal Standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.
- B. All codes/standards shall be the latest issue of specified codes/standards as amended and revised to the tender closing date, except when a year date is mentioned.
- C. Should specified reference standards conflict with Specifications, request clarification from Engineer before proceeding.
- D. The Contractor shall supply to the Engineer, on request, satisfactory evidence that all equipment and material complies with Standard Specification or test requirements.
- E. When references to the following capitalized abbreviations are made, they refer to specifications, standards or methods of the respective association. Abbreviations listed herein, but not mentioned in the Specifications, shall be disregarded.
- F. All references to Specifications, standards or methods of technical associations refer to the latest adopted revision, including all amendments.

Section 01 42 19

Reference Standards

---

**\*\* END OF SECTION \*\***

---

## Section 01 45 00 - Construction Quality Control

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Steps required to ensure that the Work is constructed according to the standards expected by the Engineer and in accordance with the manufacturers' specifications.

#### 1.02 QUALITY ASSURANCE AND CONTROL OF INSTALLATION

- A. The Contractor shall be responsible for all aspects of controlling the construction quality of the works.
- B. The Engineer will provide an on-Site representative to monitor and review the quality of the Contractor's Work and general conformance with Drawings and Specifications. However, the quality of the work is solely the responsibility of the Contractor. No such field review, regardless of its form of communication (including verbal, written or other type of records) shall relieve the Contractor from its obligations under the Contract
- C. Monitor quality control over suppliers, manufacturers, products, services, Site conditions, and workmanship, to produce work of specified quality.
- D. Comply fully with manufacturer's instructions, including each step-in sequence.
- E. Should the manufacturer's instructions conflict with Specifications, request clarification from Engineer before proceeding.
- F. Comply with specified standards as a minimum quality for the work except when more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
- G. Perform Work by persons qualified to produce workmanship of specified quality.
- H. Secure Products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

#### 1.03 FIELD SAMPLES

- A. Take field samples at the Site as required by individual Specification sections for review.
- B. Acceptable samples represent a quality level for the work.
- C. All elements of the project must be inspected and approved by the Engineer with no exceptions unless specifically stated and recorded by the Engineer. It is the sole responsibility of the Contractor to ensure this happens to avoid delays in the Work and subsequent Progress Payments. As an agent of the Owner, the Engineer has the

Section 01 45 00

Construction Quality Control

---

responsibility to ensure the Work is completed according to the Specifications. The Owner requires the Engineer's formal endorsement of the Work before any payments are made. The Engineer cannot endorse unseen work as required by the tenets and bylaws of their profession.

#### 1.04 INSPECTION AND TESTING LABORATORY SERVICES

- A. Contractor will employ services of an independent firm to perform inspection and testing as specified in the Contract Documents. An "Independent Firm" will perform sampling and testing of concrete, asphalt concrete pavement, and compaction.
- B. The independent firm will also perform inspections, sampling, tests, and other services as required by the Engineer.
- C. Reports will be submitted by the independent firm to the Engineer, in duplicate, indicating observations and results of tests and indicating compliance or non-compliance with Specification.
- D. Cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage, and assistance as requested.
- E. The Contractor shall notify the Engineer in writing and provide minimum 48-hour notice for all required field inspections. The Engineer will endeavor to assist the Contractor and promptly provide Work endorsements.
- F. Failure to provide timely and task specific notification shall not relieve the Contractor from all his contractual obligations.
- G. If conflicting duties will not allow the Engineer or its representative to be present for field inspections, adjustments should be made, at no additional cost or schedule implications. Subject to Engineer's approval, such adjustment includes but not limited to inspection deferrals, work sequence adjustments or Contractor providing records (including survey, pictures, and statements)
- H. Make arrangements with independent firm and pay for additional samples and tests required for Contractor's use.
- I. Retesting required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Engineer at no additional cost to the Owner.
- J. All field inspections to be carried out by the Engineer will require the Contractor to provide access to the Work in question, before any underground Works being backfilled. THIS IS A MUST.
- K. To accommodate both the Engineers' and the Contractor's needs to inspect, approve and pay for the Works, the Contractor must organize a meeting with the Engineer to develop an inspection protocol to the satisfaction of both parties. The meeting would include a presentation of the Engineer's requirements on behalf of the Owner and a review of the Owner's requirement in payment of the Work. The Contractor is

---

Section 01 45 00      Construction Quality Control

---

encouraged to collaborate with the Engineer to develop a Memorandum of Understanding confirming the inspection protocol to be followed during the construction process.

- L. All stages of the Work require inspection; however, based on experience, the Engineer encourages the Contractor to pay special interest with ensuring the Subgrade, crushed concrete and aggregate above and below the geosynthetic liner are sufficiently inspected.

#### 1.05 MANUFACTURERS' FIELD SERVICES AND REPORTS

- A. Submit qualifications of observer to Engineer 10 days in advance of required observations. Observer subject to approval of the Engineer.
- B. When specified in individual Specification sections, require material or Product suppliers or manufacturers to provide qualified staff personnel to observe Site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, test, adjust, balance, or replacement of equipment as applicable, and to initiate instructions when necessary.
- C. The Contractor shall report observations and Site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.
- D. Submit report in duplicate within 10 days of observation to Engineer for review.

#### 1.06 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Submit name, address, and telephone number of independent firms to perform inspection and testing requested in the Contract Documents.
- C. On request, submit documentation verifying the accuracy of test results.

#### PART 2 PRODUCTS

Not Used

#### PART 3 EXECUTION

Not Used

**\*\* END OF SECTION \*\***

---

## **Section 01 50 00 - Temporary Facilities and Controls**

---

### **PART 1 GENERAL**

#### **1.01 SECTION INCLUDES**

- A. The provisions required for temporary facilities, services, and their control.

#### **1.02 PROTECTION OF WORK AND PROPERTY**

- A. It is the Contractor sole responsibility to protect all existing property, equipment, utilities, and infrastructure from any damage or injury, directly or indirectly caused by the Contractor, through his own actions or his failure to act.
- B. The Contractor shall, at his own expense supply, erect and maintain devices and temporary facilities as may reasonably be required to ensure the protection of Owner's property, equipment, utilities, and infrastructure.
- C. It will be the Contractor responsibility to remediate, at his own cost, all damage or injury, to the satisfaction of Engineer.

#### **1.03 TEMPORARY ELECTRICITY (AS NECESSARY)**

- A. Provide and pay for power service required from Utility.
- B. Provide temporary electric feeder from existing electrical service. Do not disrupt the Owner's need for continuous power service.
- C. Provide separate metering and reimburse Owner for the cost of energy used unless alternative arrangements can be made.
- D. Provide main service disconnect and overcurrent protection at convenient location.

#### **1.04 TEMPORARY LIGHTING (AS NECESSARY)**

- A. Provide and maintain lighting for construction operations.
- B. Permanent building lighting may be utilized during construction.

#### **1.05 TEMPORARY TELEPHONE SERVICE (AS NECESSARY)**

- A. Provide, maintain, and pay for telephone service to field office.

#### **1.06 TEMPORARY HEAT (AS NECESSARY)**

- A. Provide and pay for heat devices and heat as required to maintain specified conditions for construction operation.

#### **1.07 TEMPORARY VENTILATION (AS NECESSARY)**

- A. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

---

Section 01 50 00 Temporary Facilities and Controls

---

1.08 TEMPORARY WATER SERVICE

- A. Provide, maintain, and pay for suitable quality water service required.
- B. Provide separate metering and backflow prevention and reimburse Utility for cost of water used.
- C. Extend branch pipe with outlets located so water is available by hoses with threaded connections. Provide temporary pipe insulation to prevent freezing, as required.

1.09 TEMPORARY SANITARY FACILITIES

- A. Provide and maintain required facilities and enclosures.

1.10 BARRIERS

- A. Provide easily seen barriers to prevent unauthorized entry to construction areas, to allow for Engineer's use of Site, and to protect existing facilities and adjacent properties from damage from construction operations using a variety of methods and employing the use of a Hydrovac system when working in or around existing utilities if access is available.
- B. Provide barricades and covered walkways required by governing authorities for public rights-of-way.
- C. Provide protection for plant life designated to remain. Remove and replace damaged plant life.
- D. Protect non-owned vehicular traffic, stored materials, Site, and structures from damage.

1.11 WATER CONTROL

- A. Grade Site to drain. Provide, install, operate, and maintain necessary machinery, appliance, and equipment to keep excavations free of water during construction.
- B. Dewater and dispose of water in a manner that will not cause injury or nuisance to the public and private property.
- C. Do not cause a nuisance to the public.
- D. Keep sufficient pumping equipment and machinery on hand at all times for emergencies, including electric power failures.
- E. Keep experienced personnel available at all times to operate pumping equipment, machinery, and appliances.
- F. Do not shutdown or discontinue supervision of dewatering systems between shifts, on holidays and weekends, nor during Work stoppages.
- G. Control groundwater to prevent softening of bottoms of excavations, or formation of "quick" conditions or "boils."
- H. Design and operate dewatering system that will not remove natural soil.

---

Section 01 50 00

Temporary Facilities and Controls

---

- I. Keep excavation free of water during excavation, construction of structures, installation of piping, place of structures, backfilling, and placing and curing of concrete.
- J. Control surface water runoff to prevent entry and collection in excavations.
- K. Draw down static water level a minimum of 300 mm (1 foot) below the bottom of excavations to maintain the undisturbed state of foundation soils and allow placement and compaction of fill and backfill materials to required density.
- L. Install and operate dewatering system so that groundwater level outside excavations is not lowered to an extent that will damage or endanger adjacent structures or property.
- M. Do not use open or cased pumps as primary dewatering means for excavations more than 1 metre (3 feet) below the static water level. Locate open or cased sumps outside of excavation limits.
- N. Release static water level in a manner to maintain the undisturbed state of natural soils; prevent disturbance of compacted backfill; and prevent flotation or movement of structures and piping.
- O. Do not obstruct ditches; provide means for free flow of surface water.
- P. Provide methods to remove and dispose of surplus water, mud, silt, slicking's, or other runoff pumped from excavations or from sluicing or other operations.
- Q. Do not allow untreated water generated onsite to enter municipal stormwater systems or natural water courses such as streams and lakes unless authorized by the Engineer.

1.12 DUST CONTROL

- A. Provide effective dust control during construction to the satisfaction of the Engineer and local air pollution control authority.
- B. Measures known to be effective include but are not limited to frequent use of water (water truck), application of Calcium Chloride, Magnesium Chloride, Lignin Sulfonate, or other similar products.

1.13 PROTECTION OF INSTALLED WORK

- A. Protect installed Work and provide special protection where specified in individual Specification sections.
- B. Provide temporary and removable protection for installed Products. Control Activity in immediate Work area to prevent damage.
- C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.
- D. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

---

Section 01 50 00 Temporary Facilities and Controls

---

- E. Prohibit traffic or storage upon roofed surfaces. If traffic or Activity is necessary, obtain recommendations for protection from roofing material manufacturer.
- F. Prohibit traffic from landscaped areas.

SECURITY

- G. Provide security and facilities to protect Work, equipment and supplies, and existing systems and facilities, from unauthorized entry, vandalism, or theft.

ACCESS ROADS

- H. Construct and maintain temporary roads accessing public thoroughfares to service construction area.
- I. Provide and maintain access to fire hydrants free of obstructions.

PROGRESS CLEANING

- J. Maintain areas free of waste materials, debris, and MSW. Maintain Site in a clean and orderly condition.
- K. Remove debris and MSW from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing the space.
- L. Broom and vacuum clean interior areas prior to start of surface finishing and continue cleaning to eliminate dust.
- M. Remove waste materials, debris, and MSW from Site periodically and dispose off-Site.
- N. Set up and maintain a "Decontamination Area" for cleaning and decontaminating material and equipment which comes in contact with MSW during Work activities. Decontaminate equipment and material prior to removal from Site.

1.14 PROJECT IDENTIFICATION

- A. Provide a project sign of exterior grade plywood and wood frame construction, painted, with exhibit lettering by professional sign painter, to the Engineer's satisfaction and approval.
- B. List title of project, names of the Engineer, and the Contractor.
- C. Erect on Site at location established by the Engineer.
- D. No other signs are allowed without the Engineer's permission except those required by law and through these specifications.

1.15 FIELD OFFICES AND SHEDS

- A. Provide and maintain office as weather-tight, with lighting, electrical outlets, heating and ventilating equipment, and equipped with sturdy furniture, drawing rack and drawing display table.

---

Section 01 50 00 Temporary Facilities and Controls

---

- B. Provide space for project meetings, with table and chairs to accommodate 8 persons.
- C. Provide and maintain tidy office for Engineer with desk, chair, book case, table and 110 V electric power supply and internet connection.
- D. Locate offices, trailers, containers, and sheds a minimum distance of 9 metres (30 feet) from new and existing structures.
- E. Provide space, meeting table, chairs, shelves, tables, phone, and facsimile machine.

1.16 TRAFFIC CONTROL

- A. Provide temporary traffic control to maintain existing operations of the landfill tenants' activities.
- B. Provide personnel, flaggers, traffic lights, traffic markers and traffic signs as necessary to direct traffic in an orderly fashion and maintain traffic movement which is part of the day to day activities of landfill tenants' operations.

1.17 REMOVAL OF TEMPORARY UTILITIES, FACILITIES, AND CONTROLS

- A. Remove temporary above grade or buried utilities, equipment, facilities, foundations, and materials prior to Final application for Payment.
- B. Remove underground installations to a minimum depth of 1 metre (3 feet). Cap conduits; abandon utilities, etc., pursuant to local code requirements. Grade Site as indicated.
- C. Clean and repair damage caused by installation or use of temporary Work.
- D. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.

1.18 EROSION AND SEDIMENT CONTROL

- A. Plan and execute construction by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.
- B. Minimize amount of bare soil exposed at one time.
- C. Provide temporary measures such as berms, dikes, and drains to control water flow.
- D. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
- E. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.
- F. Comply with requirements of local and provincial stormwater permits for construction Activities.

1.19 FIRE PROTECTION

---

Section 01 50 00 Temporary Facilities and Controls

---

- A. Coordinate with local fire and safety authority for required fire protection and provide as necessary.

**PART 2 PRODUCTS**

Not Used

**PART 3 EXECUTION**

Not Used

**\*\* END OF SECTION \*\***

---

## Section 01 60 00 - Product Requirements

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. The requirements in the acquisition and substitution of products associated with the Works.

#### 1.02 PRODUCTS

- A. Products mean new material, machinery, components, equipment, fixtures, and systems forming the work. It does not include machinery and equipment used for preparation, fabrication, conveying, and erection of the Work.
- B. Products may include existing materials or components supplied and approved by the Engineer, at the Engineer's discretion.
- C. Provide interchangeable components of the same manufacturer, for similar components.

#### 1.03 DELIVERY, STORAGE, AND HANDLING

##### A. General

1. All equipment shall be adequately prepared for shipment and for outdoor storage.
2. Prior to shipment, equipment shall be completely drained and thoroughly dried. When such drainage requires the removal of plugs, drain valves, etc., Seller shall be responsible that these parts are reinstalled or reassembled prior to shipment.
3. All openings and machined surfaces shall be provided with protection to prevent damage, corrosion, and entrance of foreign matter during shipment and storage.
4. Flanged connections shall be protected by a 1/2-inch or thicker plywood disc, or suitable alternate, bolted to the face of the flange.
5. Threaded or socket weld connections shall be protected with screwed or snap-in/snap-on type, securely held, plastic protectors. Cast iron plugs are not acceptable for protection unless part of the permanent assembly.
6. Butt weld connections shall be protected by wooden disks that cover the entire weld end area, and are secured by metal straps and fasteners.
7. Covers, straps, or fasteners shall not be welded to equipment.

Section 01 60 00

Product Requirements

---

8. Equipment shall be adequately supported for shipment. All loose parts shall be crated or boxed for shipment and appropriately identified. Where shipment is braced internally, it shall be marked conspicuously "Remove internal braces before testing and operating."
9. To facilitate rapid installation, all equipment shall be shop assembled to the maximum extent practical before shipment to Site.
10. All large and heavy shipping units shall have suitable skids for moving. Crating shall also be adequate for lifting with slings. If location of slings is critical, these locations shall be marked accordingly. Lifting lugs, if required, shall be provided and installed by Seller.

B. Site Handling and Storage of Materials and Equipment

1. Where required to protect against condensation and humidity, sufficient desiccant for the prescribed storage interval shall be provided by the Seller and its presence with the need of periodic removal, dry-out, or replacement shall be so marked. When electric space heaters are provided for that purpose, these shall be wired by the Seller such that energization immediately upon receipt is possible without disassembly of crates, etc. This also requires that no combustible material be left inside the equipment or crate.
2. Seller shall provide one copy of storage and handling instructions to Purchaser, including descriptions for periodic inspection and/or storage maintenance to enable Purchaser to ascertain that no deterioration will occur during storage. One set of these instructions shall also be fastened securely to the outside of each shipping unit to aid personnel in storage and handling.
3. All material and equipment shall be protected against loss; damage by corrosion, weather, overstressed components, or contamination by foreign materials. The Contractor shall repair or replace any material or equipment damage during delivery or installation at no cost to the Owner.

1.04 PRODUCT OPTIONS

- A. Products Specified by Reference Standards or by Description Only: Any product meeting those standards or description.
- B. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named.

1.05 SUBSTITUTIONS (APPROVED ALTERNATES)

- A. Substitutions may be considered at the option of the Engineer.
- B. Document each request with complete data substantiating compliance of proposed substitution with the Contract Documents.

---

Section 01 60 00      Product Requirements

---

C. A request constitutes a representation that the Contractor:

1. Has investigated proposed Product and determined that it meets or exceeds the quality level of the specified Product.
2. Will provide the same warranty for the Substitution as for the specified Product.
3. Will coordinate installation and make changes to other work which may be required for the work to be complete with no additional cost to the Owner.
4. Waives claims for additional costs or time extension which may subsequently become apparent.

D. Substitution Submittal Procedure:

1. Submit four (4) copies of request for Substitution for consideration. Limit each request to one proposed Substitution.
2. Submit shop drawings, product data, and certified test results attesting to the proposed product equivalence.
3. The Engineer will notify the Contractor, in writing, of decision to accept or reject request. If not otherwise noted in the Contract, allow at least ten (10) working days for review by the Engineer following receipt of the Substitution unless time is of the essence as interpreted by the Engineer.

**PART 2 PRODUCTS**

Not Used

**PART 3 EXECUTION**

Not Used

**\*\* END OF SECTION \*\***

## **Section 01 71 23 - Field Engineering**

---

### **PART 1 GENERAL**

#### **1.01 SECTION INCLUDES**

- A. The procedures required to track, document and measure the progress of works using established techniques in surveying to provide lines and grades, existing infrastructure locations, and progressive and final as-built drawings.

#### **1.02 GENERAL**

- A. The Work described in this section includes field engineering and survey requirements.
- B. The Contractor shall provide the following survey Work:
  - 1. Survey and provide records for all existing ground conditions (surfaces), site features, structures and pipes that are related or impact the Work
  - 2. Survey and layout the locations, lines and grades for construction of the Works
  - 3. Monthly as-built drawings and survey records supporting quantity claims for each application for a progress payment
  - 4. Final as-built drawings and survey information for use with the project record documents

#### **1.03 QUALITY CONTROL**

- A. The Contractor shall retain the services of a Land Surveyor registered with the Association of BC Land Surveyors (ABCLS) for all measurement and payment related survey records.
- B. All drawings and records shall be directly provided to the Engineer by the Land Surveyor.
- C. Subject to Engineer's approval and periodic auditing, the Contractor might utilize an in-house Surveyor. The Contractor shall provide details regarding the proposed Surveyor qualifications and experience for the Engineer's review.
- D. If in the opinion of the Engineer, any of the measurement and payment related survey records are inadequate or perceived inaccurate, the Engineer can, at any time, without consulting with the Contractor, and without any cost or schedule implications, subject to 10-day notice, revoke any previous approval for utilizing an in-house Surveyor.
- E. Utilize recognized engineering survey practices.

---

Section 01 71 23 Field Engineering

---

- F. The Contractor shall make all such allowances needed to compensate and incorporate into his work process, the site-specific conditions such as settlement, landfill gas, fire hazards, leachate, erosion, etc., as noted in the contract documents or as reasonably expected by a qualified and experienced Contractor.

1.04 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 Submittal Procedures.
- B. Submit name, address, telephone number and member ID of ABCLS Surveyor before starting survey Work.
- C. If the Contractor intends to use an in-house surveyor, in addition to the ABCLS Surveyor submittal, the Contractor shall submit for review any documentation supporting his request for surveyor change.
- D. On request, submit documentation verifying the accuracy of survey Work.

1.05 PROJECT RECORD DOCUMENTS

- A. Maintain a complete and accurate log of control and survey Work as it progresses for verification during the Engineers auditing process.
- B. Submit record documents under provisions of Section 01 77 00 Closeout Procedures

**PART 2 PRODUCTS**

2.01 GENERAL

- A. Provide complete electronic drawing files in AutoCAD (.dwg format) and Adobe Acrobat Reader (pdf. format) in a version acceptable to the Engineer (i.e. Civil 3D 2022 version) of all as-builts.
- B. Drawings must include 3D poly-lines (or feature lines) for each structure, pipe and components completed by Contractor or existing infrastructure in the general area of Work. In the AutoCAD file, provide lines and survey points on separate layers for each individual pay item as per the Schedule of Quantities and Prices (or as otherwise agreed with Engineer).
- C. Utilize naming conventions and descriptions on the as-built drawings consistent with Master Municipal Construction Documents (MMCD) drawings or legend as otherwise approved by the Engineer.
- D. Provide electronic point list files in .csv or .xlsx format, including horizontal (x, y) and vertical (z) positions with relevant point numbering and descriptions. Points shall be described in a manner acceptable to the Engineer (including list of abbreviations).
  - 1. Points to be formatted such that the number of each point begins with the survey date (i.e. 2304160001 – As the first point from April 16, 2023, followed by the point number 0001).
  - 2. At minimum, the points description shall include:

---

Section 01 71 23Field Engineering

---

- a. Specify whether it is a pipe, flange, valve, fitting, conduit, wire, JB, MH, CB, headwall, culvert, casing, liner, geotextile, road, shoulder, etc.
- b. Whether the center, top, invert, sump, inlet, outlet, etc.
- c. Diameter, gauge, type, etc.
- d. Material (i.e. Concrete, HDPE, CSP, DI, PVC, 8oz, 40mil, etc.)
- e. Do not submit duplicate points, or points that have been previously submitted, that cannot be easily identified by different layer(s) or point group(s).

## 2.02 AS-BUILT RECORDS FOR MONTHLY PROGRESS QUANTITIES

- A. In addition to the general requirements, the AutoCAD file shall show the entire Works completed to date and clearly distinguish between previously completed Works separately from current month's work.
- B. Provide an electronic list of quantities for Work completed for the current month in MS Excel format consistent with the format of the Schedule of Quantities and Prices.
- C. Each month's Work shall correspond to the Work identified in the monthly progress payment request.
- D. Ensure no overlaps for adjacent pay items (i.e. no double payment for complementary items).

## 2.03 AS-BUILT DRAWINGS FOR RECORD DOCUMENTS

- A. Provide a marked-up set of printed *Issued for Construction Drawings* showing as-built conditions. Mark all coordinates and elevations noted on printed drawings with as-built coordinates and elevations. Mark or confirm the diameter, length, slope or any other element shown in the drawings. Include all changes and revisions implemented as part of the project. Provide AutoCAD file to Engineer with as-built surveyed points (x,y,z) and 3D poly-lines for each structure, pipe and components for all as-built project items.
- B. Provide AutoCAD file to Engineer with as-built surveyed points (x,y,z) and 3D poly-lines (or feature lines) for each structure, pipe and components for all as-built project items.
- C. On request, provide documentation verifying accuracy of survey Work.

## PART 3 EXECUTION

### 3.01 EXAMINATION

- A. Install and verify locations of survey control points prior to starting Work
- B. Before starting any earthwork, The Contractor shall review and confirm the adequacy and accuracy of any control survey points and data established by the Engineer. The Contractor shall make such measurements and surveys as it deems necessary to

---

Section 01 71 23 Field Engineering

---

confirm the Engineer's control surveys. Any variances or discrepancies shall be promptly brought to the attention of the Engineer prior to starting the Work.

- C. Should any discrepancies appear, or should any difference of opinion or misunderstanding arise as to the adequacy and accuracy of any control survey points, survey methods, survey coordinates, the resolution shall be determined by the Engineer and the Engineer's decisions shall be final and binding without any claims, schedule or budgetary implications to the project.
- D. When control surveys and data have been established to the satisfaction of all concerned, the Contractor shall indicate his acceptance by submitting his acceptance in writing to the Engineer. Initiation of Work without the Contractor's submission of acceptance shall constitute unconditional acceptance of control survey data by the Contractor.

### 3.02 SURVEY REFERENCE POINTS

- A. The Contractor will locate, install and protect survey control and reference points.
- B. Maintain accuracy through a third-order survey with a horizontal accuracy to 5 cm and a vertical accuracy to 3 cm.
- C. The Contractor must always protect Owner's survey control points and preserve permanent reference points during construction.
- D. The Contractor will promptly report to the Engineer the loss or destruction, of any reference points or their relocation due to changes in grades or otherwise.
- E. The Contractor will replace dislocated survey control points based on the original control survey. No changes can be initiated without prior written notice by the Engineer.

### 3.03 GENERAL SURVEY REQUIREMENTS

- A. Establish locations, elevations, lines, grades and levels necessary for construction of the structures and systems. Locate, layout, and mark (stake) in the field via instrumentation and/or similar appropriate means:
  - 1. Stakes for grading, fill and soil placement, utility locations, slopes, and invert elevations
  - 2. Pipe system (gas, condensate, air, leachate, and stormwater) alignments, grades, connections to existing and proposed infrastructure. All alignment staking to include elbows, tees, flanges, reducers, and end points
  - 3. Grid or axis for structures
  - 4. Building foundation, column locations, and floor elevations
  - 5. Decommissioned components

6. Locations where the Hydrovac system is to be used.

B. Periodically verify layouts by same means.

### 3.04 EXISTING SITE FEATURES

- A. Prior to any and all construction, the Contractor shall locate, field stake and survey the location and alignment of all existing utilities that are in the area to be impacted by the Work. The Contractor shall manually dig test pits, expose and survey the location and elevations of the proposed connections to the existing gas, condensate, air supply, leachate, stormwater, liner gravel drainage layers, etc. The entire circumference of the existing pipe shall be exposed. The Contractor shall dig test pits, expose and survey the locations and elevations of other existing utilities in the area to be impacted by the Work. The Contractor shall identify the locations where the Hydrovac system must be used to expose existing utilities.
- B. Prior to any and all construction, the Contractor shall field stake and survey the existing surface along the proposed alignment of gas, condensate, air supply, leachate, and stormwater pipe system. The Contractor shall provide field stakes, elevations, and locations at a minimum interval of 6 metres (20 feet) on center and at every pipe junction, change in alignment, grade break, and well connection.
- C. The Contractor shall submit survey information of the existing surface and utilities 5 days prior to its intent to initiate any and all construction activities for the proposed Work. The Engineer will review and make minor adjustments to the surfaces, alignments and grades of the subgrade surfaces, storm water pipe and culverts, leachate collectors, drainage pipe systems, gas headers and sub-headers, laterals and branch pipes, and all other items as necessary to minimize the earth work and interferences with other utilities and Site features. The Engineer will provide the Contractor with revised drawings and Site instructions within 5 days from receiving the survey information.

### 3.05 FIELD QUALITY CONTROL

A. Alignment and Grade

- 1. The Contractor shall provide location, grade and alignment control during surface grading, layer placements, pipe installation and all other individual elements during the Work. The Contractor shall provide wood stakes, or similar devices, that display relevant information to control Work. Grade control devices shall be spaced no greater than 6 metres (20 feet) apart over the pipe length and no greater than 10 x 10 m grid (30 ft) for surfaces and layers.
- 2. The grade control devices shall display the design elevations for surfaces, pipes (incl. pipe bedding, invert, top of pipe and top of cover material) and for all other individual elements. The Contractor shall monitor installation and placement and verify that elevations, grades and alignments meet tolerances.

Section 01 71 23 Field Engineering

---

3. The Contractor shall immediately set new grade control devices that have been disturbed during the Work.
  4. Upon completion, the Contractor shall demonstrate to the Engineer that graded surfaces, constructed layers, installed pipes and individual elements meet design slope (grade), elevations and alignment. At a minimum, the demonstration shall check pipe elevations, slopes, and alignments every 3 metres (10 feet) on center and shall check layers and surfaces on a regular 5 x 5 m grid.
- B. Tolerances
1. Surface elevation of Subgrade, Roads, and Embankments
    - a. Within plus or minus 30 mm (one tenth (1/10) foot) of specified grade and cross-section but not uniformly high or low.
  2. Pipe Grades and alignments within plus or minus:
    - a. 100 mm horizontally from specified alignment and,
    - b. 1.5% measured over 3m,
    - c. 1.0% measured over 6m,
    - d. 0.5% measured over 9m,
    - e. Reverse grades are no acceptable
  3. Ditches and Down-chutes
    - a. Ensure finished riprap within plus or minus 100 mm
  4. Structural Concrete and Formworks
    - a. Maximum horizontal deviation = 6 mm
    - b. Maximum vertical deviation = 6 mm
    - c. Maximum deflection from horizontal or vertical alignment = 6 mm in 3 m

3.06 SURVEY FOR MONTHLY QUANTITIES

- A. The Contractor shall measure and record the as-built data for surfaces, layers, pipe and individual elements for the Work associated with the application for progress payments. The survey information shall be submitted to the Engineer as part of each progress payment as per the survey control requirements. The progress payment will not be processed until the necessary survey information has been reviewed for completeness and accuracy by the Engineer.
- B. As-built survey information shall include horizontal and vertical locations of installed pipe at a minimum of every 3 metres (10 feet) on center at grade breaks, junctions, pipes fittings, valves, or changes in alignment.

Section 01 71 23 Field Engineering

---

- C. As-built survey information shall include horizontal and vertical locations of constructed surfaces and layers on a regular 5 x 5 m grid with additional points taken at major grade breaks, material or layer thickness changes.

**\* \* END OF SECTION \* \***

---

## **Section 01 77 00 - Closeout Procedures**

---

### **PART 1 GENERAL**

#### **1.01 SECTION INCLUDES**

- A. All documents, maintenance procedures, warranties, and list of parts and materials to enable the proper protection of the Work from wear and tear, as well as ensuring the Site is left in a condition satisfactory to the Owner.

#### **1.02 CLOSEOUT PROCEDURES**

- A. Prior to the Substantial Completion request, submit final application for Payment identifying total adjusted Contract sum, previous payments, and any and all outstanding claims.
- B. Submit written certification that Contract Documents have been reviewed, work has been inspected, and that work is complete in accordance with Contract Documents and ready for Engineer's inspection.
- C. Submit application for Substantial Completion.

#### **1.03 FINAL CLEANING**

- A. Execute final cleaning prior to final inspection.
- B. Clean equipment and structures to a functional and aesthetically pleasing condition.
- C. Clean or replace filters of operating equipment.
- D. Clean Site; sweep paved areas and flush culverts.
- E. Remove surplus materials, refuse, and all construction debris from the Site.

#### **1.04 ADJUSTING**

- A. Adjust operating Products and equipment to ensure smooth and unhindered operation.

#### **1.05 PROJECT RECORD DOCUMENTS**

- A. Maintain on the Site, one set of the following record documents; record actual revisions to the work:
  - 1. Contract Drawings
  - 2. Specifications
  - 3. Addenda
  - 4. Change-orders, RFIs and Site instructions

---

Section 01 77 00 Closeout Procedures

---

5. Reviewed shop drawings, product data, and samples
- B. Store record documents separate from documents used for construction.
- C. Record information concurrent with construction progress.
- D. Specifications: Legibly mark and record at each product section a description of the actual products installed, including the following:
  1. Manufacturer's name and product model and number
  2. Product substitutions or alternates utilized
  3. Changes made by addenda and modifications
- E. Record Documents and Shop Drawings: Legibly mark each item to record actual construction including:
  1. Measured depths of foundations.
  2. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
  3. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the work.
  4. Field changes of dimension and detail.
  5. Details not on original Contract Drawings.
- F. Provide monthly records, for the entire duration of the project, regarding the total amount of fuel used by on-Site equipment.
  1. Provide separate records for different types of fuels (gasoline, diesel, propane and bio-diesel).
  2. Identify the fuel amounts under 2 separate categories:
    - a. stationary equipment (pumps, generators, etc.)
    - b. mobile equipment (excavators, dozers, trucks, etc.)
- G. National Pollutant Release Inventory (NPRI) Reporting
  1. The Contractor is to track and report on requested metrics identified by the Engineer pertaining to vehicle use, kilometers travelled, and fuel consumption. Reporting to the NPRI is mandatory under the Canadian Environmental Protection Act (CEPA). As part of this reporting, the Engineer must include any Contractor vehicles brought on Site as a result of the Work in determining the

---

Section 01 77 00      Closeout Procedures

---

vehicle-kilometers travelled threshold for reporting on road dust. The road dust created by these vehicles is a result of the facility operations and therefore must be included.

2. Contractors must fill out the Engineer provided NPRI-GHG reporting spreadsheet on a monthly basis.
3. Data is to be recorded on an Engineer provided spreadsheet and submitted to the Engineer within the first week of each successive month.

H. Submit documents to Engineer with claim for final application for Payment.

#### 1.06 OPERATION AND MAINTENANCE DATA

- A. Prepare one complete pdf package, and one printed package prior to Substantial Completion inspection, bound in 8-1/2 x 11-inch text pages, three D side ring binders with durable plastic covers.
- B. Prepare binder covers with printed title "OPERATION AND MAINTENANCE INSTRUCTIONS," title of project, and subject matter of binder when multiple binders are required.
- C. Part 1: Directory, listing names, addresses, and telephone numbers of the Engineer, Contractor, subcontractors, and major equipment suppliers.
- D. Part 2: Project documents and certificates, including the following:
  1. Shop drawings and product data
  2. Instruction manuals for all equipment
    - a. The descriptions shall not be general or applicable to multiple types of sizes of Seller's equipment, but shall be project specific with references to equipment and drawings submitted by Seller.
    - b. Schematics, parts lists, and component location diagrams shall be included for all electronic circuitry and for all circuit boards. Parts list shall provide, where applicable, generic part numbers for components.
    - c. Each manual shall contain the following components as applicable:
      - 1) Cover
      - 2) Title Page
      - 3) Table of Contents
      - 4) List of Illustrations
      - 5) List of Drawings and Tables
      - 6) Equipment Description

---

Section 01 77 00      Closeout Procedures

---

- 7) Storage
  - 8) Installation
  - 9) Alignment and Calibration
  - 10) Operation
  - 11) Equipment Maintenance and Repair
  - 12) Inactivation Procedures
  - 13) Troubleshooting
  - 14) Parts Lists
  - 15) Special Tools and Instruments Lists
3. Air and water balance reports
  4. Certificates
  5. Photocopies of warranties and bonds
- E. Submit one copy of completed volumes in final form fifteen (15) days prior to Substantial Completion inspection. This copy will be returned after the Substantial Completion inspection, with Engineer's comments. Revise and submit documents as required prior to final holdback release.

#### 1.07 QA/QC DOCUMENTATION PACKAGE

- A. Prepare one complete pdf package, and one printed package prior to Substantial Completion inspection, bound in 8-1/2 x 11-inch text pages, three D side ring binders with durable plastic covers.
- B. Prepare binder covers with printed title "QA/QC DOCUMENTATION PACKAGE," title of project, and subject matter of binder when multiple binders are required.
- C. Part 1: Directory, listing names, addresses, and telephone numbers of the Engineer, Contractor, subcontractors, and material suppliers.
- D. Part 2: Project documents and certificates, including the following:
  1. The descriptions shall not be general or applicable to multiple types of materials, but shall be project specific with references to materials, equipment and drawings submitted by Seller.
  2. Each manual shall contain the following components as applicable:
    - a. Cover
    - b. Title Page

---

Section 01 77 00      Closeout Procedures

---

- c. Table of Contents
- d. Workmanship Warranty
- e. Material Warranty
- f. Record Drawings (As built)
- g. QA/QC Program Records
  - 1) Daily Liner Wedge Trail Log Including Peel Data and Shear Data
  - 2) Liner Wedge Seam Log
  - 3) Daily Extruder Trail Log Including Peel Data and Shear Data
  - 4) Extrusion Details Log
  - 5) Destructive Test Record
  - 6) Panel Placement Log
  - 7) HDPE Pipe Welding Logs
  - 8) Pictures with Construction Progress
- h. Mill Certs and Manufacturer Quality Certificate
- i. Certificate of Analysis
- j. Oven Aging and UV Aging Test Report
- E. Submit one copy of completed volumes in final form fifteen (15) days prior to Substantial Completion inspection. This copy will be returned after Substantial Completion inspection, with Engineer's comments. Revise and submit documents as required prior to final holdback release.
- F. Submit final volumes revised, within ten (10) days after final inspection.

#### 1.08 COMMISSIONING REPORT

- A. Prepare one complete pdf package, and one printed package prior to Substantial Completion inspection, bound in 8-1/2 x 11-inch text pages, three D side ring binders with durable plastic covers.
- B. The Contractor, under its own direction, will execute and document the completion of Work, and perform the checkout, performance testing and startup for the following components:
- C. Valves
  - a. Perform all dry and wet commissioning activities as recommended by manufacturer, or if no such recommendation available, as noted below.
  - b. Storm and lechate vales can be tested under simulated conditions (including the addition of water, or as otherwise approved by Engineer).

---

Section 01 77 00      Closeout Procedures

---

- c. Gas valves shall be commissioned after the gas system is operational as intended.
  - d. Verify that valve will open and close. Inspect for, and measure any potential leakage, including downstream leakage through the valve or through the valve body.
  - e. Ensure stem threads are free of debris and lubricated. Check for damaged threads.
  - f. Check and confirm flow direction (document with pictures, especially for check valves)
  - g. Ensure proper and correct operation of the handwheel or operating nut
  - h. Check the calibration certificate if provided by the manufacturer
  - i. Lubricate valve as recommended by manufacturer
2. Gas Sample Port assemblies
- a. Includes the measurement, recording, and reporting of each SS tubing, completed in the presence of Engineer.
  - b. Take minimum two gas samples. If the results vary by more than 10%, repeat the process to the satisfaction of Engineer
3. Sensor calibration
- a. Shall be done with simulated conditions or simulated signals as determined by Engineer.
- D. All field commissioning shall be done in the presence of Engineer. The Contractor shall provide a minimum five (5) days' notice of scheduled commissioning activities.
- E. The Commissioning Report shall include descriptive pictures, sampling, and field measurements proving the verification of each construction items subject to commissioning activities.
- F. The project will not be considered Substantially Complete until an acceptable commissioning report has been provided by the Contractor.
- G. The commissioning process and Report does not take away from, or reduce the responsibility of the Contractor to meet the Contract Documents.
- H. Phased commissioning may be contemplated, subject to Engineer's approval, based on written Commissioning Plan proposed by Contractor.
- I. Submit one copy of completed volumes in final form fifteen (15) days prior to Substantial Completion inspection. This copy will be returned after Substantial Completion inspection, with Engineer's comments. Revise and submit documents as required prior to final holdback release.

---

Section 01 77 00 Closeout Procedures

---

1.09 WARRANTIES

- A. Provide reproducible notarized copies.
- B. Submit prior to final application for Payment.
- C. For items of Work delayed beyond date of Substantial Performance, provide updated submittal within ten (10) days after acceptance, listing date of acceptance as start of warranty period.

1.10 SPARE PARTS AND MAINTENANCE MATERIALS

A. General

- 1. Provide a list of recommended on hand spare parts as per manufacturer's recommendations with current price of each. Include all spare parts considered necessary for first year of operation. These spare parts shall be in addition to those specifically identified herein. In addition, supply all special tools necessary for installation of spare parts, operation, and maintenance of the equipment furnished.
- 2. The list of recommended spare parts shall be accompanied by descriptions sufficiently detailed to identify the spare parts and the specific item or items to which it applies. Indicate the minimum recommended inventory for routine maintenance and installation, startup and continuous operation. Indicate whether the recommended spare is a stock item or special item, location of nearest supply point, approximate lead time required for shipment, and the spare part price.
- 3. Spare parts shall be identical in design and manufacture and shall be interchangeable with the corresponding parts in the equipment supplied. Spare parts shall be carefully boxed and/or packed in waterproof packing for storage. Each box shall be properly marked or tagged and contain a list and identification numbers of the parts contained therein.
- 4. The list of special tools shall be accompanied by descriptions sufficiently detailed to identify the function of the tool and the specific item or items for which it applies. Indicate whether the tool is required for installation, adjustment, or routine maintenance. If the tool is required, it shall be included in the Contractor's scope of supply.

- B. Deliver to location directed by Engineer; obtain receipt prior to final payment.

**PART 2 PRODUCTS**

Not Used

---

Section 01 77 00      Closeout Procedures

---

**PART 3 EXECUTION**

Not Used

**\*\* END OF SECTION \*\***

---

## Section 03 30 53 - Cast-In-Place Concrete

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. All provisions required for casting concrete in place in relation to the Work.

#### 1.02 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Provide concrete mix design(s) that meets the minimum performance criteria for the various types of concrete(s) as shown on the Contract Documents. Any changes to the concrete performance criteria shall be highlighted by the Contractor and no such change shall be considered approved unless specifically noted by Engineer, regardless of the overall submittal acceptance.
- C. Provide complete shop drawings for all reinforcing steel including placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.
- D. Provide source data for concrete, reinforcement and aggregates, showing manufacturer name, location and contact details.
- E. Provide quality control test results as such:
  - 1. Compressive strength tests, as per CSA A23.2-3C and CSA A23.2-9c performed for each 100 m<sup>3</sup> of concrete placed per day for each mix design.
  - 2. Slump and slump flow tests, as per CSA A23.2-5C performed for each 100 m<sup>3</sup> of concrete placed per day for each mix design.

#### 1.03 PROJECT RECORD DOCUMENTS

- A. Submit under provisions of Section 01 77 00 – Closeout Procedures.
- B. Accurately record actual locations of embedded utilities and components which are concealed from view.

#### 1.04 QUALITY ASSURANCE

- A. Perform Work in accordance with CSA A23.1.
- B. Maintain one copy of documents on Site, as required by the Engineer.
- C. Acquire cement and aggregate from same source for all Work.

---

Section 03 30 53      Cast-In-Place Concrete

---

- D. Conform to ACI 305 when concreting during hot weather.
- E. Conform to ACI 306 when concreting during cold weather.

**PART 2 PRODUCTS**

**2.01 CONCRETE MATERIALS**

- A. Cement: Type 50 Sulphate-Resistant Portland Cement meeting requirements of CAN/CSA-A5.
- B. Fine and Coarse Aggregates: CSA A23.1 and A23.2.
- C. Water: Clean and not detrimental to concrete and conforming to CSA A23.1.

**2.02 ADMIXTURES**

- A. Air Entrainment: ASTM C260.
- B. Chemical: ASTM C494, Type A - Water Reducing, Type C - Accelerating, Type F or G - Water Reducing, High Range, Type D - Water Reducing, Retarding admixture.
- C. Fly Ash, Calcinated Pozzolan: CSA A3000, Type F or C1.
- D. Prohibited Admixtures: Calcium chloride, thiocyanates or admixtures containing more than 0.05 percent chloride ions are not permitted. No admixture shall cause an increase in shrinkage when tested in accordance with ASTM C494.
- E. Certification: Submit written confirmation to the above-mentioned requirements and the chloride ion content of the admixture from the admixture manufacturer prior to mix design review by the Engineer.

**2.03 ACCESSORIES**

- A. Bonding Agent: Polymer resin emulsion and two-component modified epoxy resin.
- B. Non-Shrink Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents; capable of developing minimum compressive strength of 17 MPa (2,460 psi) in 7 days and 48 MPa (~7,000 psi) in 28 days (CSA A23.2-1B).

**2.04 JOINT DEVICES AND FILLER MATERIAL**

- A. Joint Filler Type B: ASTM D1752; Closed cell polyvinyl chloride or molded vinyl foam, resiliency recovery of 95 percent if not compressed more than 50 percent of original thickness.
- B. Expansion and Contraction Joint Devices: ASTM B1751; resilient vinyl or neoprene filler strip with a Shore A hardness of 35 to permit plus or minus 25 percent joint movement with full recovery.
- C. Sealant: Elastomeric type.

**2.05 CONCRETE MIX**

Section 03 30 53 Cast-In-Place Concrete

- A. Mix and deliver concrete in accordance with CSA A23.1.
- B. Unless otherwise specified, the Contractor shall provide concrete meeting a strength of 30 MPa (~4,350 psi) at 28 days and the following:

| Mix Requirements                     | 30 MPa Concrete     |
|--------------------------------------|---------------------|
| Compressive Strength (28-day)        | 30 MPa (~4,350 psi) |
| Aggregate Size (maximum)             | 38 mm (1 1/2 inch)  |
| Air Entrainment (maximum)            | 5.5 - 7.5%          |
| Admixture                            | A type              |
| Slump - Plus or minus 25 mm (1 inch) | 50 mm (2 inches)    |

- C. Use accelerating admixtures in cold weather only when approved by the Engineer. When accepted, guidelines in SS 211.08.02 shall apply.
- D. Use set retarding admixtures during hot weather only when approved by the Engineer. When accepted, guidelines in SS 211.08.02 shall apply. Use in accordance with ACI 305.

### PART 3 EXECUTION

#### 3.01 EXAMINATION

- A. Verify requirements for concrete cover over reinforcement.
- B. Verify that anchors, seats, plates, reinforcement and other items to be cast into concrete are accurately placed, positioned securely, and will not cause hardship in placing concrete.

#### 3.02 PREPARATION

- A. Prepare previously placed concrete by cleaning with steel brush and applying bonding agent in accordance with manufacturer's instructions.
- B. In locations where new concrete is dowelled to existing work, drill holes in existing concrete, insert steel dowels and pack solid with non-shrink grout.
- C. Hardened concrete and foreign materials shall be removed from the inner surfaces of conveying equipment.
- D. Form Work shall have been completed and snow, ice, dirt, and water removed; reinforcement and all embedded fixtures shall have been positioned.
- E. Semi-porous subgrades shall be sprinkled sufficiently to eliminate suction and sealed in accordance with ACI 301.
- F. Concrete shall not be placed against frozen ground.

#### 3.03 PLACING CONCRETE

- A. Place concrete in accordance with CSA A23.1.

---

Section 03 30 53      Cast-In-Place Concrete

---

- B. Notify the Owner minimum 48 hours prior to commencement of operations.
- C. Ensure reinforcement, inserts, embedded parts, formed joint fillers and joint devices are not disturbed during concrete placement.
- D. Thoroughly dampen soils at bottom of forms. Remove standing water in bottom of forms and below slab areas prior to placing concrete.
- E. Ensure that all work is ready to receive concrete. Contractor shall schedule concrete deliveries and placement in order to minimize transit time of concrete.
- F. Install vapor barrier under interior slabs on grade. Lap joints minimum 150 mm (6 inches) and seal watertight by taping edges and ends.
- G. Repair vapor barrier damaged during placement of concrete reinforcing. Repair with vapor barrier material; lap over damaged areas minimum 150 mm (6 inches) and seal watertight.
- H. Install joint fillers, primer and sealant in accordance with manufacturer's instructions.
- I. Extend joint filler from bottom of slab to within 1/2-inch of finished slab surface.
- J. Install joint devices in accordance with manufacturer's instructions.
- K. Install construction joint device in coordination with floor slab pattern placement sequence. Set top to required elevations. Secure to resist movement by wet concrete.
- L. Place concrete continuously between predetermined expansion, control, and construction joints.
- M. Do not interrupt successive placement; do not permit cold joints to occur.
- N. Saw cut joints within 24 hours after placing. Using 3/16-inch thick blade, cut into 1/4-depth of slab thickness.
- O. Screed slabs on grade level, maintaining surface flatness of maximum 1/4-inch in 10 ft.
- P. Separate slabs on grade from vertical surfaces with 1/2-inch thick, pre-molded joint filler.
- Q. Joints not shown on Drawings shall be made and located so as to least impair the strength of the structure and shall be approved by the Owner.
- R. All reinforcement shall be continuous across joints of structural slabs. The surface of concrete at all joints shall be thoroughly cleaned and all laitance removed prior to placing adjoining concrete. Bond shall be obtained by use of the specified bonding compound or epoxy adhesive applied in accordance with manufacturer's instructions.
- S. All concrete shall be consolidated by vibration, spading, rodding or forking so that the concrete is thoroughly worked around the reinforcement, around embedded fixtures and into corners of forms, eliminating all air or stone pockets which causes honeycombing, pitting or planes or weakness. Internal vibrators shall have a

---

Section 03 30 53      Cast-In-Place Concrete

---

minimum frequency of 150 Hz and sufficient amplitude to consolidate the concrete effectively. Use of vibrators to transport concrete within forms will not be allowed. A spare vibrator shall be kept on the job Site during all concrete placing operations.

- T. If slump is measured below that specified, water may be added only if neither the maximum water/cement ratio or the maximum slump is exceeded.
- U. No water will be added to the mix following 60 minutes after initial batching. Re-dosage with a superplasticizer may be done with the prior approval of the Engineer regarding dosage and time periods.

### 3.04 CONCRETE FINISHING

- A. Provide smooth formed, exposed concrete walls without secondary finishing.
- B. Steel trowel surfaces which are scheduled to be exposed.

### 3.05 CURING AND PROTECTION

- A. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.
- B. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.
- C. Cure floor surfaces for a period of seven consecutive days. Hot and cold weather special requirements can be found in SS211.18 and SS211.19.
- D. Membrane Curing Compound: Apply curing compound in accordance with manufacturer's instructions in 2 coats with second coat at right angles to first.
- E. Polyethylene Film: Spread Polyethylene film over floor slab areas, lapping edges and sides and sealing with pressure sensitive tape cover with plywood; maintain in place for 7 days.
- F. Road crossings or any other road structure shall not be opened to traffic until the concrete has attained a minimum compression strength of 100% of the design strength. The Contractor shall be responsible for installing and maintaining road plates, detours or any other protective measures as requested by the Engineer. The Contractor shall be responsible for all costs associated with any additional testing that may be required to satisfy the strength requirement.

### 3.06 FIELD QUALITY CONTROL

- A. Field inspection and testing will be performed in accordance with CSA A23.2 and under provisions of Section 01 45 00 Construction Quality Control.
- B. Provide free access to work and cooperate with the Engineer and Owner.
- C. Submit proposed mix design to the Engineer for review prior to commencement of Work.

---

Section 03 30 53      Cast-In-Place Concrete

---

- D. The Engineer may perform tests of cement and aggregates to ensure conformance with specified requirements.
- E. Three concrete test cylinders will be taken for every 35 cubic metres (50 cubic yards) or less of each class of concrete placed.
- F. One additional test cylinder will be taken during cold weather concreting, cured on job Site under same conditions as concrete it represents.
- G. One slump test will be taken in accordance with CSA A23.2-5C for each set of test cylinders taken.

### 3.07 PATCHING

- A. Allow the Engineer to inspect concrete surfaces immediately upon removal of forms.
- B. Excessive honeycomb (e.g., exposing rebar) or embedded debris in concrete is not acceptable. Notify the Engineer upon discovery and do not hide with cement plaster.
- C. Patch imperfections as in accordance with SS 211.17.05.

### 3.08 DEFECTIVE CONCRETE

- A. Defective Concrete: Concrete not conforming to required lines, details, dimensions, tolerances or specified requirements.
- B. Repair or replacement of defective concrete will be determined by the Engineer.
- C. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of the Engineer for each individual area.

**\*\* END OF SECTION \*\***

---

## Section 03 48 00 - Precast Concrete

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. All provisions required to install precast concrete in place in relation to the Work.

#### 1.02 REFERENCES

- A. ASTM A48 Specification for Gray Iron Castings
- B. ASTM C478 Specification for Precast Reinforced Concrete Manhole Sections.
- C. CSA-A23.1 Concrete Materials and Methods for Concrete Construction.
- D. CAN/CSA-A23.2 Methods of Test for Concrete.
- E. CAN/CSA3-A23.4 Precast Concrete - Materials and Construction.
- F. CSA A251 Qualification Code for Manufacturers of Architectural and Structural Precast Concrete.
- G. ASTM C990M Standard Specification for Joints for Concrete Pipe, Manholes and Precast Box Sections Using Preformed Flexible Joint Sealants.

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Submittals and Section 01 33 00 - Submittal Procedures.
- B. Submit information showing that the product(s) meet all requirements outlined in the design Drawings and Specifications.
- C. Submit product name, supplier information, and shop drawings including reinforcement details.
- D. Conform to ACI 306 when concreting during cold weather.

### PART 2 PRODUCTS

#### 2.01 GENERAL

- A. Supply precast concrete structures to the dimensions as shown on the Drawings.
- B. All materials, unless otherwise specified, to CSA-A23.4.

#### 2.02 CASTINGS

- A. The structures must be manufactured in accordance with CAN/CSA-A23.4 and CSA A251.

---

Section 03 48 00

Precast Concrete

---

- B. Cement: Type 50 Sulphate-Resistant Portland Cement meeting requirements of CAN/CSA-A5.
- C. The manufacturing tolerances of the structures must be in accordance with CSA-A23.4.
- D. The finish edges and formed surfaces of structures with smooth faced finish grade A to CSA-A23.4.
- E. Tolerance of precast elements to CSA A251.
- F. Cure precast units in accordance with CSA-A23.4. As a minimum, the concrete shall be allowed to cure for a period of 28 days from the time the concrete was deposited and has reached 100 percent of the specified 28-day compressive strength prior to installation.

## 2.03 LOCK BLOCK WALLS AND PADS

- A. Lock Blocks shall conform to industry standards for dimensions
- B. Lock Blocks shall be standard grade with one full and one side face free of large imperfections.
- C. Lock Blocks shall have a standard 7 strand galvanized cable loop at the top center of the block for the purpose of lifting the block.

## 2.04 MANHOLES AND CATCH BASINS

- A. Supply precast concrete structures to these Specifications and those shown on the Drawings.
- B. Precast perforated manholes shall be 35 Mpa drywell barrels with 100 rectangular openings per barrel circumference on each 900 mm high section. Openings shall be spaced 150mm apart vertically and 200mm apart horizontally.
- C. All materials, unless otherwise specified, to CAN3-A23.4
- D. Precast manhole sections to ASTM C478M, circular or oval. Top sections eccentric cone or flat slab top type with opening offset for vertical ladder installation.
- E. Install MH barrels using watertight butyl rubber, pre-lubricated rolling gaskets (Tylox SuperSeal or equivalent), rated for min 10 psi water pressure.
- F. Mortar:
  - 1. Aggregate to CSA A82.56.
  - 2. Cement to CAN/CSA-A8.
- G. Grout and plug lifting holes, joints and frame with non-shrink mortar. Remove excess mortar from inside and outside surface of manhole.

---

Section 03 48 00      Precast Concrete

---

- H. Ladder rungs to CSA G30.12, NO. 25M billet steel deformed bars, hot dipped galvanized to CSA G164. Rungs to be safety pattern (drop step type). Plastic or composite rungs may be considered by the Engineer upon Contractor's request.
- I. All watertight manholes, in addition to the above specifications, to include the following items:
  - 1. Use polyurethane-based, non-sagging elastomeric sealant as per ASTM C-920, Type S, grade NS to seal all inside joints. Comply with all application methods and recommendations as per manufacturer data sheet.
  - 2. All pipe penetrations to have Link-Seal type gaskets or cast-in-place, watertight connection compatible with the type of penetrating pipe.

## 2.05 FRAMES AND COVERS

- A. Frames and covers to the Specifications shown on the Drawings.
- B. Frames and covers to dimensions as indicated and following requirements:
  - 1. Gray iron castings: to ASTM A48, strength class 30B.
  - 2. Castings to be coated with two applications of asphalt varnish.
  - 3. Frames to plan dimensions, heavy duty municipal type for road service; complete with four 12.5 mm stainless pins for securing frame to concrete lid.
  - 4. Spark resistant fiberglass or rigid polyethylene cover with embedded lifting loop or U-bolt eye and four holes for anchoring lid on frame.
  - 5. Spark resistant covers to bear evenly on frames. A frame with cover to constitute one unit. Assemble and mark unit components before shipment.

## 2.06 WARNING SIGNS

- A. Warning signs to the Specifications shown on the Drawings.
- B. Unless otherwise specified in the Drawings, warning signs to be constructed of aluminum plate stock with dimensions 300 mm by 300 mm and written with easily visible color and font.
- C. Warning signs shall not cover lifting ring on manhole lids. Signs should be adapted, if necessary, to have holes that align with lifting holes.

## PART 3 EXECUTION

### 3.01 HANDLING

- A. Each manufacturer shall package products for shipment in a manner suitable for safe transport by commercial carrier. When delivered, a receiving inspection shall be

---

Section 03 48 00      Precast Concrete

---

performed, and any shipping damage reported to the manufacturer. Materials shall be handled, installed, and tested in accordance with manufacturer's recommendations, and the requirements of this specification.

- B. Materials shall be handled carefully in loading and unloading. They shall be lifted by hoists and lowered on skid-walks in such a manner as to avoid shock. Derricks, ropes, or other suitable equipment shall be used for lowering the material into the necessary location. Materials shall not be dropped or dumped.

### 3.02 INSTALLATION

- A. Excavate and prepare foundation and bedding in accordance with 31 23 02 Earthworks.
- B. Construct precast units in accordance with Drawings, Specifications, and manufacturer's instructions, plumb and true to alignment and grade.
- C. Install precast units in the presence of the Engineer.
- D. Clean units of debris and foreign materials. Remove fins and sharp projections.
- E. Backfill around the blocks and structures in accordance with 31 23 02 Earthworks, and as shown on the Drawings.

**\*\* END OF SECTION \*\***

---

## Section 03 49 00 - Shotcrete

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This section includes details on Shotcrete.

#### 1.02 STANDARDS

American Concrete Institute (ACI)

ACI 506R Guide to Shotcrete

ACI 506.2 Specifications for Shotcrete

American Society for Testing and Materials (ASTM)

ASTM C33 Specification for Concrete Aggregates

ASTM C94 Specification for Ready-Mixed Concrete

ASTM C143 Test Method for Slump of Hydraulic-Cement Concrete

ASTM C150 Specification for Portland Cement

ASTM C231 Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method  
ASTM C260 Standard Specification for Air Entraining Admixtures for Concrete

ASTM C618 Specification for Coal Fly Ash

ASTM C1140 Practice for Preparing and Testing Specimens from Shotcrete Test Panels

ASTM C1141 Specification for Admixtures for Shotcrete

ASTM C1240 Specification for Silica Fume used in Concrete Mixtures

ASTM C1436 Specification for Materials for Shotcrete

ASTM C1604 Test Method for Obtaining and Testing Drilled Cores of Shotcrete

Canadian Standards Association (CSA)

CSA A5 Portland Cement CSA A23.5 Supplementary Cementing Materials

CSA A23.1-04 Concrete Materials and Methods of Concrete Construction

CSA A23.2-04 Methods of Test for Concrete

#### 1.03 SUBMITTALS

- A. The Contractor shall submit the following to the Engineer within 5 days of commencing the Work. The information provided shall show that the product meets all requirements outlined in the design drawings and specifications.

Section 03 49 00 Shotcrete

---

1. Product name
2. Supplier details
  - a. Shop drawings c/w reinforcement details

**PART 2 PRODUCTS**

**2.01 SHOTCRETE**

**A. Cement:**

1. Cement shall conform to the requirements of ASTM C150 Portland cement Type I, or CSA A5 Portland cement Type GU.

**B. Supplementary Cementing Materials:**

1. Fly ash shall conform to the requirements of ASTM C618, Type F, or CAN/CSA-A3000-03 Type F or CI.
2. Silica fume shall conform to the requirements of ASTM C1240, or CAN/CSA-A3000-03 Type SF

**C. Water:**

1. All water used in shotcrete production shall be of drinking water standard and free of oil and chemical or organic impurities.
2. Similarly, all water used in pressure sprayers for removal of rebound and overspray or green-cutting and for shotcrete curing shall be of drinking water standards and free of oil and chemical or organic impurities.

**D. Aggregates:**

1. Use normal weight aggregates conforming to the requirements of ASTM C33 or CSA A23.1. Aggregates shall be hard, dense, and durable and conform to limits for allowable quantities of deleterious substances as given in ASTM C33 Tables 1 and 3 or CSA-A23.1-04 Table 12.
2. Aggregates used shall not react with alkali's in the cement to an extent that results in excessive expansion of the shotcrete. The requirements of CSA A23.1-04 and CSA A23.2-27A shall be met.
3. Use nominal 3/8 in. (10 mm) maximum size coarse aggregate combined with a concrete sand to provide a blend that conforms to the following composite

Section 03 49 00 Shotcrete

gradation envelope:

| U.S. sieve size | Metric sieve size | Total passing each sieve<br>% by mass |
|-----------------|-------------------|---------------------------------------|
| 1/2 in.         | 14 mm             | 100                                   |
| 3/8 in.         | 10 mm             | 90-100                                |
| No. 4           | 5 mm              | 70-85                                 |
| No. 8           | 2.5 mm            | 50-70                                 |
| No.16           | 1.25 mm           | 35-55                                 |
| No. 30          | 630 µm            | 20-35                                 |
| No. 50          | 315 µm            | 8-20                                  |
| No. 100         | 160 µm            | 2-10                                  |

- The 3/8 in. to No. 8 (10 to 2.5 mm) coarse aggregate fraction shall be stockpiled and added separately from the fine aggregate (nominal No. 4 [5 mm] maximum size) during batching operations. (Note: in some jurisdictions 1/2 in. (12.7 mm) maximum size aggregate is now being used in thicker bench-gunned walls.)

E. Admixtures

- Do not use any admixtures containing chlorides. Do not use any shotcrete accelerators without written authorization by the Engineer.
- Air-entraining admixtures shall conform to the requirements of ASTM C260.
- Chemical admixtures, such as water reducers, high-range water reducers (superplasticizers), and retarders, shall conform to the requirements of ASTM C1141

F. Reinforcement

- Reinforcing steel is not required in this application, but rather reinforcing fiber that complies with industry standards in application and composition

G. Performance Requirements

- Proportion shotcrete to meet the following performance requirements:

Section 03 49 00 Shotcrete

| Test description                           | Test method                  | Age (days) | Specified requirement   |
|--|------------------------------|------------|---|
| Maximum water/cementitious materials ratio |                              | —          | 0.45  |
| Air content – as shot <sup>1,2</sup>       | ASTM C231, or CSA A23.2-4C   | —          | 4 ± 1%  |
| Slump at discharge into pump               | ASTM C143, or CSA A23.2-5C   | —          | 2 1/2 ± 1 in.<br>(60 ± 20 mm)                                   |
| Minimum compressive strength, psi (MPa)    | ASTM C1604, or CSA A23.2-14C | 7<br>28    | 2900 psi (20MPa) <sup>3</sup><br>4350 psi (30 MPa) <sup>3</sup> |

Note 1: To obtain an as-shot air content of 4 ± 1% will require an air content at the point of discharge into the shotcrete pump in the 7 to 10% range.

Note 2: The use of air entrainment is beneficial even in shotcrete not exposed to freezing and thawing because, as air content is lost on shooting, there is a corresponding loss of slump on impact that helps prevent sagging and sloughing.

Note 3: Some authorities require shotcrete cores extracted from test panels (or the in-place shotcrete) to only meet 85% of the specified strength, as is often done for concrete cores. If this is the requirement for the project, then this should be clearly stated in the project specification. Otherwise, the minimum specified compressive in the previous table prevails.

Note 4: The Engineer may specify higher compressive strengths if structurally required.

### PART 3 EXECUTION

#### 3.01 BATCHING, MIXING AND SUPPLY

A. Batch, mix, and supply wet-mix shotcrete by one of the following methods:

1. Central mixing with transit mixture delivery; or
2. Transit mixing and delivery.

B. Central Mixing and Supply

1. Aggregate, cement, and silica fume shall be mass batched in a central mixer in accordance with the requirements of ASTM C94 or CSA A23.1-04. Water and chemical admixtures shall be batched to the accuracy specified in ASTM C94 or CSA A23.1-04;
2. Transit mixers shall be free of excessive accumulations of hardened shotcrete or concrete in the drum or on the blades. Blades shall be free of excessive wear. Transit mixture delivery shall conform to the requirements of ASTM C94 or CSA A23.1-04; and

---

Section 03 49 00      Shotcrete

---

3. All shotcrete shall be shot within 90 minutes after addition of mixture water to the batch. Shotcrete loads shall be of such batch size that this requirement is met. This time limit may be extended, subject to approval by the Engineer, if proper use is made of set retarding or hydration controlling admixtures to maintain workability without re-tempering with water.

C. Transit Mixing and Supply

1. Apply for central mixing except that all ingredients shall be added directly to the transit mixer instead of the central mixer. Transit mixers shall be charged to not more than 70% of their rated capacity, to enable efficient mixing action.

3.02 APPLICATION AND FINISHING

- A. Construct units in accordance with details indicated, plumb and true to alignment and grade.
- B. Provide suitable scaffolding, man lifts, or other devices to provide the nozzlemen, helpers, and inspectors with free unhindered access to the work area. Provide safety measures to protect the workers on such devices that comply with the requirements of the authorities having jurisdiction.
- C. Install sufficient lighting and ventilation to provide the nozzlemen and helpers with a clear, unhindered view of the shooting area. Work shall be terminated and corrective measures adopted if, in the opinion of the Engineer, visibility is unsuitable for the safe application of quality shotcrete.
- D. Use good shotcrete nozzling technique as detailed in ACI 506R-05. In particular:
  1. Use the bench-gunning technique. Orient the nozzle at right angles to the receiving surface, except as required to fill corners, cover edges, and encase reinforcing steel;
  2. Optimize the combination of air volume at the nozzle and distance of the nozzle from the receiving surface to achieve maximum consolidation of the shotcrete and full encapsulation of the reinforcing steel;
  3. Adjust air volume and distance of the nozzle from the work while encasing reinforcing steel to keep the front face of the reinforcement clean during shooting operations, so that shotcrete builds up from behind to encase the reinforcement without the formation of shadows or voids;
  4. Nozzleman's helper to continuously remove accumulations of rebound and overspray using blowpipe, or other suitable devices in advance of deposition of new shotcrete; and

---

Section 03 49 00 Shotcrete

---

- 5. Do not include rebound, hardened overspray, or stiffened shotcrete trimmings in the shotcrete work.
- E. When applying more than one layer of shotcrete trim with a cutting rod, or brush with a stiff bristle broom to remove all loose material, overspray, laitance, or other material detrimental to bonding of the next layer of shotcrete.
- F. Allow shotcrete layer to stiffen sufficiently before applying next layer of shotcrete. If shotcrete has set and hardened, high-pressure water blast (minimum 5000 psi [34.4 MPa]) with clean water and bring to a saturated surface-dry (SSD) condition at time of application of the next layer of shotcrete. Use air blow pipe to accelerate drying if necessary.
- G. Shotcrete is to have a minimum thickness of 30 mm.
- H. Use a shooting technique that provides full encapsulation of all reinforcing steel and embedment's. Cut out any voids, shadows, sags, or other defects from the applied shotcrete while still plastic and reshoot. Otherwise make good any defects in the hardened shotcrete using light-duty chipping hammers (15 lb. [7 kg] maximum) followed by high pressure water blasting (minimum 5000 psi [34.4 MPa]) to remove bruised shotcrete surface.
- I. Trim shotcrete with a cutting rod or other suitable device to the specified line and grade. Finish shotcrete to a sandy texture as approved by the Engineer using suitable finishing tools. Tolerance of finished surface shall be as specified by the Engineer which will be no more than a 3 cm deflection from a straight 3 m levelling stick.
- J. Protect all fixtures and adjacent concrete surfaces from build-up of rebound, overspray, and shotcrete trimmings. Remove all such materials from the work area on a daily basis.
- K. Remove any excess shotcrete applied outside of the specified areas to be shot. Leave the work area in a clean condition on completion of the work, free from contamination by excess shotcrete trimmings, rebound, overspray, or slurry from shotcrete operations.
- L. Construct construction joints to a 45-degree tapered edge. Cut plastic shotcrete with a trowel or other suitable tool to form a construction joint. Green cut with a 5000 psi (34.4 MPa) water pressure jet the next day, if necessary, to remove loose material. Do not feather-edge (produce long tapered) construction joints. Square (90 degrees) joints permitted on horizontal surfaces over which concrete slabs will be placed.

### 3.03 EXCAVATION AND BACKFILL

- A. Excavate and backfill in accordance with the Drawings.
- B. Obtain approval of Engineer before installing structures.

### 3.04 CURING AND PROTECTION

---

Section 03 49 00      Shotcrete

---

- A. On completion of finishing, prevent shotcrete from drying out by moist curing using fogging or wetting or maintenance of a minimum 95% relative humidity in the area surrounding the shotcrete.
- B. Moist-cure shotcrete for a minimum of 7 days. Moist curing shall be accomplished using one or more of the following procedures:
  - 1. Wrap the elements in wet burlap covered with a plastic sheet or a pre-saturated plastic coated nonwoven synthetic fabric; or
  - 2. Install sprinklers, soaker hoses, or other devices that keep the shotcrete continuously wet for the specified period. Avoid the use of intermittent wetting procedures that allow shotcrete to undergo cycles of wetting and drying during the curing process.

### 3.05 ACCEPTANCE

- A. The Engineer has the authority to accept or reject the shotcrete work. Shotcrete that does not conform to the project specifications may be rejected either during the shotcrete application process, or on the basis of tests on cores from test panels or the completed work.
- B. Deficiencies observed during the shotcrete application process, such as but not limited to the following, constitute a cause for shotcrete rejection:
  - 1. Failure to properly control and remove build-up of overspray and rebound;
  - 2. Incomplete consolidation of shotcrete around reinforcing steel and/or embedment;
  - 3. Incorporation of shadows, excessive voids, delamination, sags or sloughing; and
  - 4. Failure to apply shotcrete to the required line and grade and tolerance.
- C. Whenever possible, perform remedial work to correct deficiencies while shotcrete is still plastic.
- D. The hardened shotcrete will be examined by the Engineer for any evidence of excessive plastic or drying shrinkage cracking, tears, feather-edging, sloughs, or other deficiencies. Sounding or suitable nondestructive testing shall be used to check for voids and delamination. If the shotcrete does not meet the specified criteria, the work will be rejected and the Contractor shall implement a remediation program to correct the deficiency.
- E. If the results of compliance tests from shotcrete test panels or assessment of the plastic or hardened shotcrete indicate nonconformance of the shotcrete to the project

---

Section 03 49 00      Shotcrete

---

specifications, the Engineer will implement a program of evaluation of the in-place shotcrete. Such evaluation shall include, but not be limited to:

1. Extraction of cores from the in-place shotcrete at locations selected by the Engineer and evaluation of such cores for compliance to the project specifications;
2. Checking for delamination using sounding or other appropriate nondestructive testing procedures; and
3. Diamond saw cutting or coring to check the adequacy of encasement of reinforcing steel and embedment's.
4. Shotcrete that is proven to be nonconforming to the project specifications shall be removed and replaced by the Contractor at no cost to the Owner.

**\*\* END OF SECTION \*\***

---

## Section 03 49 01 – Concrete Cloth

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This section specifies a Geosynthetic Concrete Composite Mat (GCCM) that consists of a flexible, three-dimensional fiber matrix impregnated with cement that hardens when hydrated to form a durable concrete layer. When installed and hydrated in the field, the GCCM provides a strong, durable protection layer. The GCCM has a low alkaline reserve and a low wash rate for a low ecological impact.

#### 1.02 STANDARDS

- |   |                    |
|---|--------------------|
| A. Compressive Strength                           | ASTM C473 and C773 |
| B. Ultimate Strip Tensile Strength (MD) (cured)   | ASTM D5035         |
| C. Ultimate Strip Tensile Strength (MD) (uncured) | ASTM D5035         |
| D. 3 Point Bending Strength                       | ASTM C1185         |

#### 1.03 SUBMITTALS

- A. Product Data: Submit manufacturer's product data and installation instructions. Include required substrate preparation and a list of fastening devices to be used.
- B. Certifications: Manufacturer shall submit a letter of certification that the product meets or exceeds all technical and packaging requirements.

#### 1.04 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products in a sealed factory labeled package to prevent moisture from the air or other sources from reaching the GCCM. Store and handle in strict compliance with manufacturer's instructions and recommendations. Protect from damage, weather, excessive temperatures and construction operations.

### PART 2 PRODUCTS

#### 2.01 GEOSYNTHETIC CONCRETE COMPOSITE MAT (GCCM)

- A. GCCM has a low alkaline reserve and a low wash rate for a low ecological impact. The cement is specially formulated to provide greater resistance to chemical attack and to provide greater abrasion resistance than commonly used cements. It has good resistance to attack by UV light. The product has an initial set as low as 80 minutes and final set at high as 270 minutes at room temperature. The GCCM will achieve about 70% to 80% of its strength within 24 hours of hydration. GCCM can be hydrated using either fresh or seawater.

---

Section 03 49 01 Concrete Cloth

---

- B. All components shall be pre-packaged by the Manufacturer to assure material performance properties. The GCCM shall be a polyester fiber matrix, which is cement impregnated and PVC backed, manufactured in rolls that conforms to the shape of its substrate and hardens when watered:
1. Fabric – polyester
  2. Cement – specially formulated
  3. PVC Backing

2.02 ACCESSORIES

- A. Anchoring Devices: The GCCM shall be secured in place using heavy-duty metal staples or spikes. The metal staples shall be U-shaped, a minimum of 6 inch long (each leg), one and one half (1-1/2) inches wide, and shall be fabricated from 9 gauge diameter metal wire. If difficulties arise installing the staples, then 10 inch pins fabricated from 9 gauge with one and one half (1-1/2) inch diameter washer or 7 inch gutter spike with one and one half (1-1/2) inch diameter washer shall be used. In some cases where loose soil conditions exists and anchors of stated length do not properly secure the GCCM to the ground, then longer staples devices should be used such as 8-12 inch long staples or pins.
- B. Stakes shall be 12inches minimum, with 2 inch washers
- C. Fastening Screws: Stainless Steel #10 or #12 Hex head self-tapping course thread, 1/2 to 1 inch in length (depending on subsurface conditions) used for securing all overlaps together. See drawings for placement and frequency.
- D. Adhesive Caulk (if required, see drawings): Loctite PL Premium Polyurethane, Sikaflex 1A or other adhesive that has been demonstrated in laboratory tests to adhere to both sides of the Concrete Cloth. Strictly comply with manufacturer's installation instructions and recommendations. See drawing for placement.
- E. Earth Percussion Anchors (if required, see drawings): Gripple Inc, Platipus or equal. Strictly comply with manufacturer's installation instruction and recommendations to determine load capacity. See Drawing for placement.

**PART 3 EXECUTION**

3.01 SUBSTRATE PENETRATION

- A. Examine substrates and conditions where materials will be applied. Ensure surface is relatively flat to achieve optimum contact of the GCCM with soil surface unless it is the desire of the designer to create an energy dissipation structure with considerable roughness. Erosion features such as rills, gullies, etc. must be graded out of the surface before GCCM deployment. Apply the GCCM to geotechnically stable

---

Section 03 49 01      Concrete Cloth

---

slope(s) or channel(s), otherwise, compact the surface (as required by the Engineering plans/specifications) before deploying GCCM. Make sure the GCCM makes direct contact with the surface to minimize soil bridging or potential soil migration under the GCCM. Do not proceed with installation until satisfactory conditions are established.

Rocks or foreign objectives larger than 1 inch in diameter and any other material which could damage the GCCM or not allow the GCCM to be directly in contact with the surface shall be removed from the surface. Each day during placement of GCCM, the Subcontractor and Construction Manager shall inspect the surface on which GCCM is to be placed and certify in writing that the surface is acceptable. Repairs to the subgrade shall be performed at no additional cost to the Owner. During placing when adhesive seaming of the overlaps are required, the subgrade shall be kept free of all standing water to allow the adhesive to cure per manufacturer's requirements unless the adhesive manufacturer lists application of the adhesive underwater as a recommended use.

- B. Depending upon project sequencing and intended application, prepare subgrade in compliance with other specifications.
- C. Cut trenches for initial anchor trenches, termination trenches and longitudinal anchor trenches (min 6 inches deep) as shown on the drawings.
- D. Where appropriate or required, cut intermediate check slots at 30-40 ft. apart, perpendicular to channel flow direction (min. 3 inches wide and min. 6 inches in depth) depending on channel alignment. This is an acceptable alternative if approved by the Engineer prior to installation.

### 3.02 INSTALLATION

- A. Strictly comply with manufacturer's installation instructions/recommendations and drawings.
- B. Each panel of the GCCM shall be rolled out and installed in accordance with the approved shop drawings prepared by the Subcontractor or as depicted on the drawings. The layout shall be designed to keep field seams of the concrete cloth to a minimum and consistent with proper methods of manufacturer's installation requirements. The GCCM shall be free of tensile stresses, folds, and wrinkles.
- C. GCCM rolls shall be placed using proper spreader and rolling bars so that the GCCM would not be stretched during deployment.
- D. The Subcontractor shall inspect each panel, after placement and prior to seaming, for damage and/or defects. Defective or damaged panels shall be replaced or repaired.
- E. The Subcontractor shall avoid dragging the GCCM sheets on rough soil subbase.
- F. Personnel working on the GCCM shall not wear damaging shoes or involve themselves in any activity that may damage the GCCM.

---

Section 03 49 01      Concrete Cloth

---

- G. Vehicular traffic across the GCCM shall not be allowed, except as specified herein. When the subgrade has been prepared and is stiff enough to carry vehicle traffic or a designed base is constructed to carry the vehicle traffic, vehicle traffic will be allowed. Otherwise vehicle traffic over the GCCM may very well deform into ruts that form in the subgrade.
- H. All damaged areas and destructive sample locations shall be recorded and located on the as-built drawings.
- I. The GCCM shall be kept free of debris, unnecessary tools and materials. In general, the GCCM area shall remain neat in appearance.
- J. Should it be necessary to place equipment required to perform the installation on top of the GCCM, a scrap piece of the GCCM shall be placed under the equipment and between the equipment and the GCCM being installed in order to protect from possible damage.
- K. No equipment shall be allowed to remain on top of the installed GCCM overnight. All equipment must be removed and stored away from the installed GCCM.
- L. Care shall be taken during installation to avoid damage occurring to the GCCM as a result of the installation process. Should the GCCM be damaged during installation, a GCCM patch shall be placed over the damaged area extending a minimum of 6 inches in all directions beyond the damaged area and attach the GCCM in place according to the manufacturer's instructions.
- M. Remove the protective plastic cover of each GCCM roll only when ready to deploy and install to prevent undue exposure to humidity, precipitation or other construction activities that would cause the GCCM to start to hydrate prior to completing the installation of the roll.
- N. Install the approved anchoring devices if required (will depend on application, soils and terrain) at a minimum frequency of 0.25 pins/staples per square yard. Additional anchoring devices may be required depending on site conditions or alignment of the slope or channel. See drawings for required anchor systems and spacing.
- O. When overlapping successive GCCM rolls or edge rolls, the rolls shall be overlapped upstream over downstream and/or upslope over downslope to allow for shingling and prevent water from striking exposed edges in the direction of water flow.
- P. For channel applications, begin at the downstream end of the channel. Inspect trenches for position accuracy and depth and re-dig to required dimensions. If trenches have not yet been constructed, dig termination anchor trench, check slot trenches and longitudinal anchor trenches as illustrated in installation guidelines or as directed on the plans. Unroll and cut the GCCM to the desired length. Position and deploy the GCCM over the termination trench, see drawings for overlap directions – PVC side should always be facing down). Secure the GCCM within the termination trench and

---

Section 03 49 01 Concrete Cloth

---

longitudinal trench with the appropriate anchor device when required. See drawing for placement and frequency.

- Q. Position the next panel with a 4 inch overlap from the previous panel installation. Continue deploying the GCCM upstream to the next check slot. Overlap a minimum of 4 inches the ends of rolls with the next roll(s) being deployed, or position in bottom of check slot and anchor. If significant water has accumulated within the anchor trench, remove excess water as directed by engineer or owner. Install anchoring devices and fasten screws as shown on drawings. Apply Mechanical Channel, Adhesive Caulk, fasten screws or Adhesive Tape (if required) concurrently during the overlap process of deploying the next GCCM over the previous GCCM installation panel. Always backfill intermediate check slots prior to deploying the next GCCM panel over the backfill check slot. Only install what can be fully installed and hydrated (including anchor devices) before the end of construction day to minimize any adverse effect on the installation and/or performance capabilities of the product.
- R. For slope applications, construct top anchor trench 1-3 ft beyond crest of slope, or as illustrated in drawings or shown in manufacturers recommended installation guidelines. Position GCCM roll at crest of slope with sufficient material to line the anchor trench as illustrated in the drawings. Position adjacent rolls to facilitate 4 inch overlaps. Anchor GCCM in trench with appropriate pins/staples at the required intervals as shown on the drawings. The preferred method of deployment is to roll the GCCM down slope and stand on the uphill side of the roll and install the anchoring devices as it rolls out down the slope, minimizing foot traffic until GCCM is secured with anchor devices and fastening screws at the overlaps. Always allow the mat to drape over the soil, never pulling it taut, to ensure contact with the surface. Place additional pins into any apparent depressions to maintain contact with the soil. During the anchor trench backfill compact the soil alongside the GCCM and spray the GCCM within the anchor trenches with water to start the hydration process. Do not backfill soils into trench if significant water has accumulated within the anchor trench. Remove excess water as directed by engineer or owner. Apply Mechanical Channel/Adhesive Caulk or Adhesive Tape (if required) concurrently during the overlap process of deploying the next GCCM over the previous GCCM installation panel. Only install what can be fully installed and hydrated (including anchor devices) before the end of construction day.

### 3.03 DEFECTS AND REPAIRS

- A. Repair or replace torn or damaged GCCM. Perform repairs in accordance with manufacturer's requirements. Remove and replace GCCM rolls which cannot be repaired. Repairs shall be performed at no additional cost to the Owner.

### 3.04 VISUAL INSPECTION AND EVALUATION

- A. The GCCM, seams, and non-seam areas shall be visually inspected by the Subcontractor and Construction Manager for defects, holes, or damage due to weather

---

Section 03 49 01 Concrete Cloth

---

conditions or construction activities. A daily inspection report will note the area of inspection, time, date and who inspected the area, when the GCCM was installed and when it was fully hydrated (weather: temperature and precipitation events). At the Construction Manager's discretion, the surface of the GCCM shall be brushed, blown, or cleared by other methods by the Contractor if the amount of dust, mud, or foreign material inhibits inspection or functioning of the GCCM. Refer to the MSDS sheet for personal protective equipment recommendations when blowing dust off the surface of the GCCM. Inspection shall be completed prior to and after hydration.

### 3.05 HYDRATION

- A. Hydration shall be completed in accordance with the manufacturer's requirements. Spray the fiber surface multiple times until the GCCM is fully saturated. The wet concrete cloth will first darken and then become lighter as it absorbs the water. Depending on the size and duration of the installation, you might want to hydrate in sections and not wait until the entire area is completed. Do not spray high pressure water directly onto the GCCM as this may wash a channel in the material. The GCCM can be hydrated using fresh water or salt water and will hydrate and set underwater. There is a working time of 1-2 hours after starting the hydration activity. Working time will be reduced in hot climates. If the GCCM is not fully saturated, setting may be delayed and strength reduced. If found to be under hydrated, re-wet immediately.
- B. To determine whether the GCCM has been sufficiently hydrated simply press your thumb into the GCCM and release. If water is present in the depression in the GCCM, it has been sufficiently hydrated. If no water is observed then more water must be applied. The GCCM cannot be over hydrated and excess water is always recommended. Minimum water volume for the GCCM is 0.3 gals/sq.ft. Repeat hydration of the concrete cloth after 1 hour from the initial hydration if needed.
- C. If the temperature is expected to fall below 32 degrees Fahrenheit within 8 hours following hydration, hydration shall not be allowed unless directed by Engineer. The Engineer must design a system to prevent water from freezing before it reacts with the cement and hardens. A combination of accelerators, plastic covers, heat blankets, warm water, and or heaters may be considered. Contact the manufacturer for advice in designing the proper cold weather protection scheme. It is also not recommended to install on frozen ground as the ground may move significantly when it thaws, creating voids underneath the set GCCM.
- D. In some extremely sensitive ecological areas and/or if regulation governing the project require, it may be necessary to collect the excess hydration water and dispose of this water by some alternative method, rather than releasing the water at the project site.
- E. At the owner's request, the contractor will provide an installation date two weeks prior to installation so that a manufacturer's representative can be on the site during the initial installation of the GCCM to provide guidance and technical assistance.

### 3.06 CLEANING

---

Section 03 49 01      Concrete Cloth

---

- A. Properly dispose of all packaging material and core tube per project requirements.

**\*\* END OF SECTION \*\***

---

## Section 05 50 00 - Metal Fabrications

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Miscellaneous metalwork, including structural steel shapes, plates, fasteners and bars; steel ladders, grating, seat angles, and miscellaneous supports and guides.

#### 1.02 REFERENCES

- A. Handbook of Steel Construction, as issued by the CISC.
- B. Detailing for Steel Construction, Second Edition, as issued by the AISC.
- C. Structural Welding Code as issued by the CWS.
- D. Metal Framing Manufacturers Association Standard Publication MFMA-1.

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Provide shop drawings showing dimensions, details, and necessary accessory items. Detailing Work shall conform to CISC Detailing for Steel Construction.

#### 1.04 DELIVERY STORAGE AND HANDLING

- A. Fabricated metal shall be delivered on long-bed trucks or trailers adequately supported to prevent bending and other damage. Adequate preparations shall be made for unloading and handling prior to delivery of materials. Materials shall be unloaded by hand, by appropriate slings, or other means that will prevent damage. Materials shall be stored above ground in such a manner as to prevent rusting and bending, and shall be protected with waterproof covers.

### PART 2 PRODUCTS

#### 2.01 GENERAL

- A. Materials for miscellaneous metalwork shall be as follows:

| Material  | Specification              |
|---|----------------------------|
| Steel shapes, plates, bars, clips and similar items | ASTM A 36                  |
| Steel pipe  | ASTM A 53, Type S, Grade B |
| Steel tubing  | ASTM A 500, Grade B        |

Section 05 50 00 Metal Fabrications

| Material        | Specification             |
|-----------------|---------------------------|
| Stainless steel | ASTM A 320, Type 304      |
| Aluminum        | ASTM B 241, Alloy 6061-T6 |

2.02 SEAT ANGLES, MISCELLANEOUS SUPPORTS AND GUIDES

- A. Seat angles and supports for grating, supports for floorplates, clips, plates and angles for precast wall panels, lintels and guides for slide gates shall be steel, of sizes shown, and shall be hot-dip galvanized after fabrication.

2.03 METAL FRAMING SYSTEM FOR PIPE SUPPORTS, ANCHORS AND GUIDES

- A. General: The bolted metal framing system shall be made of channel, fittings, and hardware as defined in the Metal Framing Manufacturers Association Standard Publication MFMA-1.
- B. Material and Finishes:
- Hot-Dip Galvanized After Fabrication: Channels Hot-Dipped Galvanized After Fabrication shall be made from steel meeting the minimum requirements of ASTM A570, Grade 33. Eighteen gauge (1.2-mm) and lighter channel shall be ASTM A611, Grade C steel. Channels shall be Hot-Dip Galvanized After Fabrication in accordance with ASTM A123. All ¼ (6.3) fittings shall be formed from ASTM A635 steel and Hot-Dip Galvanized After Fabrication in accordance with ASTM A123.
  - Stainless Steel: Stainless Steel Channel and accessories shall be of AISI Type 304 or Type 316 Stainless Steel.
- C. Dimensions: Metal Framing Channel shall be cold formed 12 Ga. (2.06mm), 14 Ga. (1.63mm), or 16 Ga. (1.29mm) steel. All channels shall have a nominal overall width of 1 5/8-inch (41.3mm) and have a 7/8-inch (22.2mm) slot face opening. All testing and tolerances shall be in accordance with the latest MFMA-1 Standard.
- D. Metal Framing System Components:
- Components shall be from a single manufacturer such as B-Line System, Inc., or Unistrut Corporation and include the following components:
    - Strut Channel – Model B22 or P1000
    - Combination Strut Channel – Model B52A or P4101
    - Pipe Clamp – Model B2400 or P2558
    - Adjustable Brace – Model B634 or P2815
    - Concrete Insert – Model B22I or P3253

---

Section 05 50 00      Metal Fabrications

---

- f. End Cap – Model B205 and B287 or P1180 and P2280A
- g. Spring Nut – Model N226 or P1009
- h. Bolt – Model HHCS 3/8 x Size or HHCS037 x Size

#### 2.04 GALVANIZING

- A. Hot-Dip Galvanizing: Large structural steel items such as columns and beams shall be galvanized only if specifically shown on the Drawings. Galvanizing by the hot-dip process shall conform to the applicable requirements of ASTM A 123, A 153, A 384, A 385, and A 386.
- B. Field Repair of Galvanizing: Field repair of galvanizing shall be done using Z.R.C. Cold Galvanizing Compound.

#### 2.05 BOLTS, NUTS AND WASHERS

- A. Bolts shall physically conform to ASTM A 193, Grade B8M. Bolt and nut dimensions shall conform to ANSI B18.2. Washer dimension shall conform to ANSI B27.2.
  - 1. Above ground nuts and bolts shall conform to ASTM A 307 unless noted as stainless steel. Carbon steel bolts, nuts and washers shall be hot-dip galvanized after fabrication.
  - 2. All below ground bolts shall be stainless steel. Stainless steel bolts and accessories shall be Type 304 material. Bolts shall be Stainless steel, Grade B, heavy hex, in accordance with the requirements of Class C of ASTM A153. Nuts shall conform to the requirements of ASTM A563. Nuts shall be Grade A, heavy hex, hot dip zinc-coated in accordance with Class C of ASTM A153. Washers shall be Grade A, hot dip zinc-coated in accordance with Class C of ASTM A153.
  - 3. All thread is not allowed unless authorized by the Engineer.

#### 2.06 EXPANSION BOLTS

- A. Expansion bolts shall be wedge-type bolts, and shall be Molly Parabol Concrete Anchors. Expansion bolts shall be stainless steel. Components of stainless-steel expansion bolts, including nuts, washers, and wedges, shall be stainless steel. Minimum embedment lengths and edge distances shall be as recommended by the manufacturer, unless otherwise shown on the Drawings.

### PART 3 EXECUTION

#### 3.01 GENERAL REQUIREMENTS

- A. Measurements shall be verified at the Project Site. Holes shall be punched 1.6mm (1/16-inch) larger than the nominal size of the bolt, unless otherwise specified. No drifting of bolts or enlargement of holes will be allowed to correct misalignment.

---

Section 05 50 00      Metal Fabrications

---

- B. Dissimilar metals shall be protected from galvanic corrosion by means of pressure tapes, coatings, or isolators.
- C. Metalwork to be embedded in concrete shall be placed accurately and held in position while the concrete is placed.
- D. Structural steel that is completely encased in concrete shall not be galvanized or painted and shall have a clean surface for bonding to concrete.

### 3.02 FABRICATION

- A. Fabrication and workmanship shall be performed in accordance with the AISC Specification for Design, Fabrication, and Erection of Structural Steel for Buildings. Fabrication, including cutting, drilling, punching, threading, and tapping required for miscellaneous metal or adjacent Work shall be performed prior to hot-dip galvanizing.

### 3.03 CONNECTIONS

- A. Welded: Welding shall be done by operators who have been qualified by tests as prescribed by the Canadian Welding Bureau (CWB) in Standard Chylification Procedure to perform the type of Work required. The quality of welding shall conform to CWB Structural Welding Code.
- B. Bolting: Bolts for structural and miscellaneous steel connections shall extend no further than twice the bolt diameter past the nut. Washers shall be installed at the nut on bolt assemblies. Stacking of nuts or washers on bolts will not be permitted. Bolted connection shall conform to CISC and shall be as shown on the Drawings.

### 3.04 SEAT ANGLES, SUPPORTS AND GUIDES

- A. Seat angles for grating and supports for floor plates shall be set so that the gratings and floor plates are supported evenly and maintain the grating and floor plates flush with the floor.

### 3.05 GRATING

- A. Openings in concrete surfaces for gratings, floor and miscellaneous cover plates shall be field measured for proper cut-outs and proper size. Holes through gratings and cover plates shall be banded. Dimensions shall be field verified to ensure proper fit prior to ordering. Grating shall be attached to supports with a minimum of four hold-down clips per panel.

### 3.06 CLEANING

- A. After installation, damaged surfaces of shop primed metals shall be cleaned and touched-up with the same material used for the shop coat.

### 3.07 REPAIR AND GALVANIZING

- A. Damaged areas of galvanizing shall be cleaned with mineral spirits followed by wire brushing. After wire brushing, areas shall be cleaned with Z.R.C. metal conditioner

---

Section 05 50 00      Metal Fabrications

---

and coated with Z.R.C. Cold Galvanizing Compound in accordance with the manufacturer's printed instructions and recommendations.

**\*\* END OF SECTION \*\***

---

## Section 31 23 01 - Excavating, Trenching and Backfilling

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This section specifies requirements for excavating, trenching and backfilling for pipe, conduits and appurtenances, including but not limited to the following: excavation of the existing quarry floor, temporary trenching downstream of the Clay Berm for the permanent solid 600 mm HDPE pipe, backfilling of the keyed trench with compacted clay.

#### 1.02 STANDARDS

|            |  |
|------------|--|
| ASTM D422  | Standard Test Method for Particle-Size Analysis of Soils.  |
| ASTM D698  | Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbs./ft <sup>3</sup> (600 kN-m/m <sup>3</sup> )).   |
| ASTM D1556 | Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.   |
| ASTM D1557 | Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbs./ft <sup>3</sup> (2,700 kN-m/m <sup>3</sup> )). |
| ASTM D1586 | Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils  |
| ASTM D1587 | Standard Practice for Thin-Walled Tube Sampling of Soils for Geotechnical Purposes.  |
| ASTM D2166 | Test for Unconfined Compressive Strength of Cohesive Soils.  |
| ASTM D2167 | Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.  |
| ASTM D2216 | Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass.   |
| ASTM D2321 | Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow applications.                               |
| ASTM D2487 | Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System).  |
| ASTM D2573 | Standard Test Method for Field Vane Test in Cohesive Soils.  |
| ASTM D2937 | Standard Test Method for Density of Soil in Place by the Drive Cylinder Method.  |

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

|            |  |
|------------|--|
| ASTM D4254 | Standard Test Method for Minimum Index Density and Unit Weight of Soils and Calculation of Relative Density.                 |
| ASTM D4643 | Standard Test Method for Determination of Water (Moisture) Content of Soil by the Microwave Oven Heating.                    |
| ASTM D4944 | Standard Test Method for Field Determination of Water (Moisture) Content of Soil by the Calcium Carbide Gas Pressure Tester. |
| ASTM D4959 | Standard Test Method for Determination of Water (Moisture) Content of Soil by Direct Heating.                                |
| ASTM D6938 | Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).   |
| MMCD       | Master Municipal Construction Documents Association.   |

### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance Section 01 33 00 - Submittal Procedures.
- B. Provide design and supporting data for shoring, bracing and underpinning required for Work.
- C. The Contractor shall arrange with independent firm and provide results for in-place moisture/density testing with the following frequency:
  1. Compaction testing shall be performed at a minimum of every 100 m of linear trench for each lift as shown in the Contract Documents
  2. Compaction testing shall be performed at a minimum of every 1,000 m<sup>2</sup> of road surface for each lift as shown in the Contract Documents
  3. The Engineer reserves the right to require a minimum of 3 additional re-tests for each failed compaction test.

### PART 2 Products

Not Used

### PART 3 Execution

#### 3.01 PROTECTION OF EXISTING FEATURES

- A. Size, depth and location of existing utilities and structures as indicated are for guidance only. Completeness and accuracy are not guaranteed.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

- B. Request and conduct, with the Engineer, a condition survey of existing buildings, trees and other plants, lawns, fencing, service poles, wires, rail tracks, pavement, survey benchmarks and monuments which may be affected by Work.
- C. If the Contractor has failed to request and conduct condition survey, the Contractor shall reinstate all items affected by Work, as per Engineer's request, without any schedule nor budgetary impacts.
- D. Prior to commencing excavation Work, notify in writing the Engineer and authorities having jurisdiction, establish location and state of use of buried utilities and structures. Request and review any available drawings from the Owner. Note that Engineer and the Owner will not be responsible for accuracy of the Drawings and it remains the Contractor's responsibility to properly locate all services. Confirm locations of buried utilities by careful test excavations.
- E. Maintain and protect from damage, water, sewer, gas, electric, telephone and other utilities and structures encountered.
- F. Utilities including known water mains, LFG headers, LFG condensate lines, leachate collector pipe, storm water culverts and overhead power lines exist in area of excavation. Protect these utilities and work around them as part of the Work. Include any costs related to rerouting these utilities in the unit rates for the related Works. In case any unexpected infrastructure is identified, obtain direction of Engineer before re-routing.
- G. Record location of maintained, re-routed and abandoned underground lines.
- H. Protect existing buildings and surface features from damage while Work is in progress. In the event of damage, immediately make repair to approval of Engineer.
- I. Protect extraction wells, manholes and any other structures and pipe from any uplift and displacement or disturbance during excavation operations.
- J. Where required for excavation, cut roots or branches as approved by Engineer.
- K. Decontaminate equipment (e.g., remove debris and power wash) which has been used in MSW prior to being used for backfilling operations.
- L. On this project, pay special attention to existing LFG headers, water main, power lines, condensate lines, leachate and stormwater culverts that will need to be crossed or connected to.

### 3.02 SITE PREPARATION

- A. Remove obstructions, ice and snow, from surfaces to be excavated within limits indicated.
- B. Cut pavement or sidewalk neatly along limits of proposed excavation in order that surface may break evenly and cleanly.
- C. Where traffic is impacted, provide traffic control as specified in the Contract.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

### 3.03 EXCAVATION AND TRENCHING

- A. All excavations shall be in open cut unless otherwise permitted by the Engineer. Strictly follow WCB work procedures for safe trenching Work. Also, trench may be contaminated with landfill gas, assess air quality continuously when workers present. Follow health and safety procedures per Section 00 73 19.
- B. The Contractor shall be aware that it is anticipated that excavation will be in MSW. Safety precautions must be taken during these construction activities in conformance to the requirements specified in Section 00 73 19 - Health and Safety Requirements.
- C. Contours of existing ground elevations are approximate elevations of the finished grades. The contours and elevations of the present ground are believed to be reasonably correct, and have been adjusted to account for landfill settlement since the survey was taken (see Engineer for details). Undertake required cuts to depths shown relative to actual ground elevations, as determined during pre-excavation survey. The Contractor shall satisfy himself as to the existing contours and elevations.
- D. Excavate soil and/or MSW required for all trenching and pipe installation to lines, grades, elevations, and dimensions as indicated on the Drawings. Conform to maximum size of excavation and cover placement requirements in other sections. Maximum length of trench exposed at any time is 20 metres. All exposed MSW to be covered with 300 mm of soil cover before the end of day.
- E. Excavated cover material shall be separated from excavated MSW. Temporarily stockpile the clean excavated cover material that is approved by the Engineer for backfilling adjacent to Works. Dispose of MSW or surplus and unsuitable excavated material as specified in the contract documents.
- F. Grade top perimeter of excavation to prevent surface water from draining into excavation.
- G. The banks of trenches and excavations shall be no steeper than 1 horizontal to 1 vertical where the trench depth exceeds 1.2 m. Notify the Engineer immediately if any water seeps into the excavation since this may be an excavation stability concern.
- H. For trench excavation, unless otherwise authorized by Engineer in writing, do not excavate more than 20 m of trench in advance of installation operations and cover with minimum 300 mm of clean fill by the end of day's operation.
- I. Open trenches and excavations shall be the Contractor's sole responsibility. The Contractor is warned that some excavations may encounter ponded leachate. Dewater excavations into leachate ditch as necessary. Excavations are to be appropriately covered and barricaded to prevent entry if left overnight.
- J. Accurately excavate and grade bottom of trenches to provide uniform bearing and support for each section of the pipe on full thickness of approved bedding material at every point along entire length.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

- K. Wherever possible, earth bottoms of trenches and excavations to be undisturbed soil, level, free from loose, soft or organic matter.
- L. Notify Engineer of unexpected subsurface conditions and discontinue affected Work in area until notified to resume Work.
- M. Remove unsuitable material from trench or excavation bottom to extent and depth as directed by Engineer.
- N. Correct unauthorized over-excavation using 5 to 25 mm crushed gravel compacted to not less than 95 percent of corrected maximum dry density or as otherwise approved by Engineer.
- O. Hand trim, make firm and remove loose material and debris from excavations and trenches. Where material at bottom of trench or excavation is disturbed, compact foundation soil to density at least equal to undisturbed soil.
- P. Do not disturb soil within branch spread of trees or shrubs that are to remain. If excavating through roots, excavate by hand and cut roots with sharp axe or saw. Seal cuts with approved tree wound dressing.
- Q. Notify Engineer when bottom of excavation is reached and obtain Engineer approval of completed excavation.
- R. Excavated soil, if clean (i.e. free of MSW or any other debris), to be used in leachate trench for back filling.

### 3.04 DEWATERING

- A. Dewatering Design and Performance Requirements
  - 1. Engage a Professional Engineer, registered in the Province of BC, with demonstrated competence to design, and to supervise construction, operation and maintenance of a dewatering system
  - 2. Design, construct operate and maintain a dewatering system to control groundwater. Consider also the lateral tracking of groundwater underneath existing structures
  - 3. Co-ordinate with design and construction of excavation shoring systems, excavation and backfilling operations
  - 4. Prevent surface run-off from entering the excavations. Construct ditches, berms and similar items as required to lead water away from excavation. Do not allow silt laden run-off water to enter water courses. Direct run-off flows to siltation ponds or catchment areas
  - 5. Maintain groundwater level a minimum of 300 mm below subgrade level, or lower as may be required, to permit placement of geotextiles, granular filter

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

blankets, granular construction working surface, concrete and similar items, on firm dry undisturbed subgrade

6. Maintain groundwater at required level until:
  - a. Structure is completely built where designed self-weight of structure resists buoyancy forces
  - b. Backfilling to final grade is complete
  - c. Other permanent devices which protect the structures against buoyancy are operational
7. Prevent destabilization, heaving, or shear failure of the sides and bottom of excavation
8. Prevent damage to or displacement of structures from groundwater pressures
9. Obtain Engineer's written consent prior to allowing a rise in groundwater level or prior to shutting down the dewatering operation
10. Repair or replace any structure or works damaged due to dewatering at no expense to the Owner
11. Existing culverts should be either capped or removed and backfilled as directed by Engineer. If the culverts are to be removed, the Contractor should salvage and store them on-Site as directed by the Engineer

**B. Dewatering Discharge Requirements**

1. Provide appropriate filter screens so that no soil or foundation material is removed, and solids concentration of less than 5 ppm in the discharge water is achieved. Do not exceed solids concentration of 10 ppm at any time
2. The Contractor will carry out physical analysis of drainage water to establish conformance with provincial regulations, if required by the Engineer
3. Discharge drainage water to existing inner leachate collection ditch. When discharging to water course, prevent erosion of existing banks by energy absorption devices, such as rock dams

**3.05 OVER EXCAVATING**

- A. Where, in Engineer's opinion, the Contractor has undertaken over-excavation beyond lines and grades shown on the Drawings, the Contractor shall refill the excavated space with approved material to the proper elevation in accordance with the procedures specified for backfill. No extra payment will be made for this Work.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

- B. If undisturbed condition of the soil / waste is inadequate for the support of installations, over excavate to adequate supporting soils as directed by Engineer. Where so required by Engineer and except as otherwise specified, the excavation and removal of inadequate material as specified, supply and installation of such material in excess of the quantities shown on Drawings shall be conducted at Force Account rates, with all volumes first estimated and approved by the Engineer. Any over-excavation of unsuitable ground completed without written authorization by Engineer shall be considered excessive over-excavation under A above.

### 3.06 STOCKPILING

- A. Stockpile imported fill materials in areas designated by Engineer. Stockpile granular materials in manner to prevent segregation.
- B. The designated stockpile, laydown and Site office locations can be anywhere on Site within the designated areas shown on the Drawings and as best suited to the Owner's needs.
- C. Protect fill materials from contamination.

### 3.07 SHORING, BRACING AND UNDERPINNING

- A. Protect existing features using temporary barriers as directed by the Engineer and in accordance with applicable local regulations.
- B. Engage services of qualified professional engineer who is registered or licensed in province of BC, Canada in which Work is to be carried out to design and inspect proposed shoring, bracing and underpinning required for Work.
- C. Design and supporting data submitted to bear stamp and signature of qualified professional engineer registered or licensed in province of BC, Canada.
- D. Professional Engineer responsible for design of temporary structures to submit proof of insurance coverage for professional liability except where Engineer is employee of the Contractor, in which case the Contractor shall submit proof that Work by Professional Engineer is included in the Contractor's insurance coverage.
- E. Construct temporary Works to depths, heights and locations as directed by aforementioned qualified Professional Engineer.
- F. During backfill operation:
  - 1. Unless otherwise indicated or as directed by Engineer, remove sheeting and shoring from excavations.
  - 2. Do not remove bracing until backfilling has reached respective levels of such bracing.
  - 3. Pull sheeting in increments that will ensure compacted backfill is maintained at an elevation at least 500 mm above toe of sheeting.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

- G. When sheeting is required to remain in place, cut off tops at elevations as indicated.
- H. Upon completion of substructure construction:
  - 1. Remove shoring and bracing.
  - 2. Remove excess materials from Site as directed by Engineer.

### 3.08 BACKFILL

- A. Do not proceed with backfilling operations until Engineer has inspected and approved installations.
- B. Employ a placement method that does not disturb or damage other Works.
- C. Areas to be backfilled to be free from debris, snow, ice, water and frozen ground.
- D. Where imported granular material is required around structures, pipe, conduits and appurtenances, as indicated on the Drawings, place backfill material in uniform layers not exceeding 150 mm compacted thickness. Place layers simultaneously on both sides of installed Works to equalize loading and minimize movement. Use specified backfill materials compacted to the required 95 percent of Maximum Modified Proctor Dry Density (MMPD), except in areas close to liner where minimal compaction should be performed. Maintain optimum moisture content of backfill materials required to attain specified compaction density.
- E. Where waste is excavated and is exposed, cover by end of working day with 300 mm of grading fill as intermediate cover, compacted thickness up to grades indicated. Compact using suitable mechanical compacting equipment. Roots, debris or stones greater than 75 mm shall be completely removed from the backfill material.
- F. Do not operate heavy compaction equipment closer than 1 metre to foundations, underground utilities, extraction wells and within 500 mm of geomembrane or GCL liners.
- G. Do not backfill around or over cast-in-place concrete within 24-hours after placement of the concrete.
- H. Where temporary unbalanced earth pressures are liable to develop on walls or other structures:
  - 1. Permit concrete to cure for minimum 14 days or until it has sufficient strength to withstand earth and compaction pressure and approval obtained from Engineer, or:
  - 2. If approved by Engineer, erect bracing or shoring to counteract unbalance, and leave in place until removal is approved by Engineer.

### 3.09 COMPACTION

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

A. General:

1. Compact soils to not less than the following percentages of maximum dry density for soils which exhibit a well-defined moisture density relationship determined in accordance with ASTM D 1557 (Modified Effort) and, where appropriate, not less than the following percentages of relative density for soils which do not exhibit a well-defined moisture density relationship determined in accordance with ASTM D 4254.
  2. Soil for foundation, backfill, and embankment material shall be moisture conditioned as necessary to achieve the specified compaction densities.
- B. Subgrades: Unless otherwise noted, compact top 150 mm (6 inches) of subgrades to density not less than required for the subsequent layer of fill/backfill material.
- C. Foundation material: Compact to 95 percent maximum dry density.
- D. Embedment material: Compact to 95 percent maximum dry density.
- E. Final backfill material: Compact to 90 percent maximum dry density.
- F. Embankment material: Compact to 90 percent maximum dry density.
- G. Roads & Parking Areas:
1. Embankment Material: Compact to 95 percent maximum dry density.
  2. Surfacing: Compact to 95 percent maximum dry density.

3.10 FIELD QUALITY CONTROL AND QUALITY ASSURANCE

- A. The Contractor shall be responsible for all aspects of controlling the construction quality of the works.
- B. The Engineer will provide an on-Site representative to monitor and inspect the quality of the Contractor's Work and general conformance with Drawings and Specifications. However, the quality of the work is solely the responsibility of the Contractor.
- C. The Contractor shall fully cooperate with the Engineer in conducting the quality control inspection as outlined throughout these Specifications.

3.11 RESTORATION

- A. Upon completion of Work, remove waste materials and debris, trim slopes, and correct defects as directed by Engineer.
- B. Grade so that water will drain away from buildings, walls and paved areas, to catch basins and other disposal areas approved by Engineer. Grade to be gradual between finished spot elevations shown on Drawings.
- C. Reinstate pavement to elevation which existed before excavation.

---

Section 31 23 01      Excavating, Trenching and Backfilling

---

D.    Clean and reinstate areas affected by Work as directed by Engineer.

**\*\* END OF SECTION \*\***

---

## Section 34 71 10 - Road Crossings

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Excavation for underground pipe and casing (both gravel and asphalt).
- B. Furnishing and installing embedment material for pipe and conduit systems.
- C. Backfilling and compacting for underground pipe, conduit, and casing.

#### 1.02 REFERENCES

- A. Each provision discussed within this Section – Road Crossings supersedes all other specification sections concerning road crossings only. All other associated Works will be carried out in accordance with the associated sections as follows:

#### 1.03 QUALITY ASSURANCE

- A. All materials intended for use procedures to be used shall be approved by the Engineer prior to each road crossing.

#### 1.04 PROTECTION

- A. Provide an additional emphasis on traffic control and safety in accordance with the approved Health and Safety Plan.

### PART 2 PRODUCTS

#### 2.01 MATERIALS

- A. See Drawings for location of use
- B. See Drawings for specific gradations and material requirements
- C. Foundation Material:
  - 1. Minus 19 mm (3/4 in) crushed rock or crushed concrete
- D. Embedment Material:
  - 1. Asphalt paving topped roadways
    - a. Cast in place 20 MPa concrete
  - 2. Gravel topped roadways
    - a. Minus 19 mm (3/4 in) crushed rock or crushed concrete
  - 3. Piping protection - Piping will be surrounded in 20 MPa concrete as per Drawing specifications for hot mix asphalt topped roadways

---

Section 34 71 10      Road Crossings

---

- a. Piping will be installed inside steel casing as per Drawing specifications for gravel topped roadways

## 2.02 ACCEPTANCE

A. The Work shall be accepted by the Engineer when:

- 1. Conformance test results meet the requirements of the Contract Documents
- 2. Required documentation from the field and laboratory testing laboratories has been received and accepted
- 3. All repairs have been completed to the Engineer's satisfaction
- 4. Written certification documents, including as-built drawings, have been received by the Engineer

## PART 3 EXECUTION

### 3.01 SECONDARY GRAVEL ROAD CROSSING

- A. Install piping that crosses a secondary gravel road with a steel casing according to specification Section 33 20 85 – Pipe Casing surrounded by road base materials as per Contract Documents.

### 3.02 MAIN ROAD CROSSING

- A. Install piping that crosses the main road embedded in 20 MPa concrete from 0.10 m below the pipe up to the base of the asphalt pavement as per Contract Documents

### 3.03 REINSTATE ROAD AND SHOULDER STRUCTURE

- A. All crossings shall be completed such the road and shoulder structure are reinstated as per original condition or as otherwise specified in the Contract Documents.

**\*\* END OF SECTION \*\***

---

## **Section 31 23 02 - Earthwork for Landfill Gas System and Other Items**

---

### **PART 1 GENERAL**

#### **1.01 SECTION INCLUDES**

- A. Excavation for underground pipe and conduit (both trenching and open cut).
- B. Excavation for Site structures and foundations.
- C. Furnishing and installing foundation material (when necessary).
- D. Furnishing and installing embedment material for pipe and conduit systems.
- E. Backfilling and compacting for underground pipe, conduit, and structures.
- F. Furnishing and installing imported backfill material for pipe and conduit systems.
- G. Furnishing and installing imported embankment material for pad construction and road crossings.
- H. Subgrade preparation including compaction.
- I. Disposal of soils, rock, or other material not suitable for use or needed in the project.
- J. Dewatering excavations.

### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Submit surveyed topographic map within area proposed piping routes as indicated on the Drawings as specified hereinafter.
- C. Submit samples of proposed materials to be used in construction, whether excavated and processed from materials on Site or imported, for testing and review of testing and inspection service. Submit samples of sufficient size, quantity, and frequency, as determined by the testing service.
- D. Submit laboratory test results and field test results of soils/aggregates used in foundation, embedment, and backfill construction, as specified hereinafter.
- E. Submit quality control documentation.
- F. If dewatering is necessary, submit a plan for controlling Site water as specified herein.

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

- G. Submit trench subgrade survey as specified hereinafter.

#### 1.04 QUALITY ASSURANCE

- A. Codes and Standards: Perform Work in compliance with applicable requirements of governing authorities having jurisdiction and referenced codes and standards.
- B. Testing and Inspection Service: Engineer may engage a testing and inspection services for quality assurance during earthwork operations, independent of the Contractor's testing and inspection services.
- C. The Contractor shall be responsible for daily quality control including: analysis of soil processing operations to ensure that the materials produced and installed comply with the gradations and material specifications described hereinafter.
- D. The Contractor shall employ a qualified testing and inspection agency to provide the necessary quality control testing. The Contractor shall employ a qualified surveying firm to provide specified alignment, grades, and elevations.
- E. The Contractor shall maintain and submit accurate reports of all quality control testing and surveying. The Engineer's testing and inspection service may make periodic random checks of the Contractor's processing and installation operations.
- F. All materials intended for use shall be approved by the Engineer prior to placement.

#### 1.05 PROTECTION

- A. Protect persons, both on and off the Site, from injury. Barricade temporary open excavations occurring as part of the Work with suitable fences and barriers. Equip barriers with warning lights.
- B. Protect trees, shrubs, lawns, existing structures, fences, roads, sidewalks, utilities, and other features that are to remain as part of the completed project Site subject to the conditions of 1.05 A being met as a priority. If there is any conflict between these two sections, the Engineer must approve any variations.
- C. Protect off-Site property from damage caused by the Contractor's construction operations. Exercise particular care in preventing any disturbed soils, debris, MSW, or other potential pollutants from entering any water course or adjoining property.
- D. Do not bring or use explosives on the Site unless specified herein.
- E. Immediately repair at the Contractor's cost all damage caused by construction Work.

### PART 2 PRODUCTS

#### 2.01 MATERIALS

- A. See Drawings for location of use.
- B. See Drawings for specific gradations and material requirements.
- C. Seal - Bentonite:

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

1. Bentonite seal shall be high swelling sodium montmorillonite (bentonite) containing no organic polymers. Bentonite shall be applied in the form of fast hydrating chips or pellets. The bentonite shall have the following properties:

| Required Properties of Bentonite  |        |                   |                                      |                                |
|---|--------|-------------------|--------------------------------------|--------------------------------|
| Parameter   | Units  | Test Method       | Test Frequency                       | Value                          |
| Montmorillonite Content   | %      | X-Ray Diffraction | 1                                    | 85 min.                        |
| Liquid Limit  | %      | ASTM D4318        | 1 per Truckload or<br>2 per Rail Car | >500 min.                      |
| Free Swell  | cc     | See Note 1        | 1 per Truckload or<br>2 per Rail Car | 16 min.                        |
| Colloid content   | %      | See Note 2        | 1 per Truckload or<br>2 per Rail Car | 70 min.                        |
| Permeability  | cm/sec |                   |                                      | 1.5 x 10 <sup>-9</sup><br>max. |
| Grain Size of Dry Bentonite   | %      | ASTM D422         | 1 per Truckload or<br>2 per Rail Car | See Gradation<br>of Bentonite  |
| Moisture Content  | %      | ASTM D2216        | 1 per Truckload or<br>2 per Rail Car | 19 max.                        |
| <b>Notes</b><br>1 Free swell shall be determined by mechanically reducing 2 grams of bentonite through a minus 100 mesh and placing into a graduated cylinder, then gradually adding 100 cubic centimeters of distilled water. The required volume shall be reached within 24 hours.<br>2 Colloid content of the bentonite shall be determined by evaporating and weighing the suspended portion from a 2 percent distilled water solution after 24 hours of sedimentation. |        |                   |                                      |                                |

2. Bentonite shall be processed into chips and granules meeting the gradations specified below:

| Gradation of Bentonite |           |                                   |          |
|------------------------|-----------|-----------------------------------|----------|
| Sieve Size             |           | Percent Retained by Weight (min.) |          |
| S.I. Units             | U.S. Std. | Chips                             | Granules |
| 12.7 mm                | 1/2 in    | 17.0                              | -        |
| 9.51 mm                | 3/8 in    | 35.0                              | -        |
| 6.35 mm                | 1/4 in    | 41.5                              | -        |
| 4.75 mm                | No. 4     | 6.0                               | 0.5      |

|----------|--------|---|------|
| 2.38 mm  | No. 8  | - | 41.0 |
| 1.68 mm  | No. 12 | - | 41.0 |
| 0.841 mm | No. 20 | - | 17.0 |

3. Acceptable products for fast hydrating bentonite chips include Enviroplug Medium as manufactured by Wyo-Ben, Incorporated, Billings, Montana. Acceptable products for fast hydrating bentonite granules include Enviroplug No. 8 as manufactured by Wyo-Ben, Incorporated, Billings, Montana. For another product to be an approved equivalent it shall have free swell characteristics the meet or exceed the requirements above.

SOURCE QUALITY CONTROL

- D. Soils: Material testing of soils used for foundation, embedment, final backfill and embankment material shall be performed to ensure the consistency of the properties of the soil obtained from on or off-Site borrow sources. These tests shall be performed by the Contractor prior to processing, placement, compaction and any necessary conditioning. The results of these tests shall be submitted to the Engineer within 10 days after award. At a minimum, the following tests shall be conducted:

| Materials Tests for Borrow Source  |                           |
|--|---------------------------|
| Parameter  | Test Method               |
| Particle Size of Soils – Washed Sieve  | ASTM D422                 |
| Moisture/Density Relationship  | ASTM D1557 <sup>(2)</sup> |
| Notes:<br>1. Frequency: A minimum of three tests shall be conducted per borrow source. Tests will also be conducted when there is a noticeable change in material type as determined by the Engineer.<br>2. ASTM D1557 for soils which exhibit a well-defined moisture-density relationship. ASTM D4254 for soils which do not exhibit a well-defined moisture-density relationship. |                           |

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that survey benchmark and intended elevations for the Work are as indicated.

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

- B. Before starting any earthwork, the Contractor shall review and satisfy itself as to the adequacy and accuracy of the control surveys and data established by the Engineer for the purpose of computing payment quantities.
- C. Verify that materials excavated and processed on Site meet the specified requirements.
- D. Coordinate construction of road crossings with Engineer. Do not interfere with traffic associated with landfill operations. Plan construction activities to maintain vehicle access for landfill operations.

### 3.02 PREPARATION

- A. Locate and layout the required lines, levels, contours, and datum.
- B. Identify, flag, and protect known utilities.

### 3.03 EXCAVATION

#### A. General

- 1. Excavation consists of removal of all types of material encountered when establishing required subgrade elevation, trench dimensions and adequate support for elevations, grades and alignment as shown on the Drawings.
- 2. The MSW disposed of within the landfill is unknown. The estimated limits of MSW are shown on the drawing; however, MSW may be encountered outside the limits shown. When it is necessary to excavate into MSW, or near MSW, in order to perform any of the Work, the Contractor's Site-specific Health and Safety Plan shall be strictly followed during excavating, handling, and disposing of the MSW, and whenever working in proximity to exposed MSW. **The Contractor is cautioned of the possibility of encountering potentially harmful gases, contaminated soils, liquids, asbestos, or hazardous wastes. Work near MSW may encounter harmful gases, liquids, and soil even if MSW is not found.**
- 3. Unauthorized excavation consists of removal of materials beyond indicated subgrade/grade or finished elevations or dimensions without specific direction of the Engineer. Unauthorized excavation, as well as remedial Work directed by Engineer, shall be at the Contractor's expense.
- 4. Remedial Work for Unauthorized Excavation
  - a. Under footings, foundation bases, or other structures fill unauthorized excavation by extending bottom elevation of footings, base, or structure to excavation bottom, without altering required top elevation. Lean concrete fill may be used to bring elevations to proper position, when acceptable to the Engineer.

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

- b. Elsewhere, backfill and compact unauthorized excavations with specified Foundation Material, as determined by Engineer. Compact to a density not less than that specified for the subsequent materials layers.
5. Stability of Excavations: Slope sides of temporary excavations to comply with local codes, bylaws, and authorities having jurisdiction. Provide steel strutted trench boxes, or properly designed sheeting, shoring, and bracing systems where sloping is not possible due to space restrictions or where depth of excavation exceeds 1.2 metres (4 feet), or stability of material being excavated is uncertain. Maintain sides and slopes of excavation in a safe condition until completion of backfilling.
6. If unstable conditions are encountered, the Contractor shall excavate below grade to such depth and width as directed by the Engineer. The excavated area below grade shall be filled with foundation material in 150-mm (6-inch) compacted layers and brought up to within 150 mm (6 inches) of the bottom of the pipe.
7. Excavation shall not interfere with normal 45 degree bearing splay of adjacent structure foundations. Underpin adjacent structures which may be damaged by excavation Work, including utilities and pipe chases.
8. Material which is part vegetation soil, surfacing, pavement, or cover system (such as gravel, pavement, topsoil, and/or barrier soil), shall be separated from other excavated material wherever possible. Such material shall be removed in a manner to separate it clearly from underlying material and shall be stored or disposed of, on the Site where directed by the Engineer. Before excavation through any paved surfaces, pavement shall be sawed by means of a power saw, to the width of the trench and so as to minimize damage to pavement outside of the trench limits.
9. Grade top edge of excavation to prevent surface water from draining into excavation.
10. Stockpile excess excavated unprocessed material at locations as directed by Engineer.
11. The Contractor shall take all necessary precautions to protect underground pipe during the course of the construction. Some information is available from the Engineer pertaining to the location and existence of underground pipe and utilities. The Contractor is responsible for locating and protecting all underground utilities.

---

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

12. Schedule all road crossings with Engineer to minimize disruption to waste disposal operations and traffic. The Contractor shall provide a minimum of 2 week notice of intended road crossing Work.

B. Trench Excavation

1. For gas and condensate pipe and other utility pipe, trench excavation shall conform to ASTM D2321, Section 6.
2. Walls of trenches below the elevation of the crown shall be maintained as vertical as possible. Where the trench excavation exceeds depths of 1.2 metres (4 feet), the trench walls shall be sloped or structurally retained with trench boxes or sheeting, shoring, and bracing systems in accordance with applicable safety regulations.
3. Hand trim excavation. Remove loose matter, water softened subgrade, lumped subsoil, boulders, and rocks.

C. Structure Excavation:

1. Excavate subsoil required to accommodate structural foundations, slabs-on-grade and Site structures.
2. Extend excavations laterally from structure walls and footings a minimum of 600 mm (2 feet) to allow for clearance for observation and placement and removal of forms.
3. Hand trim excavation. Remove loose matter, water softened subgrade, lumped subsoil, boulders, and rocks.

D. Excavation near Geosynthetics:

1. Request presence of Engineer when excavating near geosynthetics. Do not expose geosynthetics without giving Engineer opportunity for inspection.
2. Provide a “spotter” when using heavy equipment to expose geosynthetics. If using heavy equipment (other than manual labour) to expose geosynthetics, a person must be present during use of heavy equipment to assist the equipment operator in positioning equipment/attachments/tools so as not to damage geosynthetics.
3. Expose existing geosynthetics by carefully removing overlying material without damaging existing geosynthetics.
4. Protect exposed geosynthetics from soil, rock, etc. sloughing off the face of the excavation until the geosynthetics connections are complete and accepted by the

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

Engineer. If a temporary shoring system is used for this purpose, it shall have a flat surface and be heavily padded where in contact with the existing geotextile and geomembrane, so as not to damage or weaken them.

5. The Contractor shall use low ground pressure equipment when working on top of the final cover system (which contain underlying geosynthetic materials). Except as otherwise indicated in the Contract Documents, the equipment shall not exert a force on the ground surface of greater than 35 kPa (5 psi).

### 3.04 BACKFILL CONSTRUCTION

- A. Prior to initiating placement of foundation, embedment and final backfill material, submit to the Engineer: laboratory test results for classification of material; laboratory test results for moisture/density relationships; mechanical equipment to be used for compaction; techniques for appropriate moisture conditioning; verification of trench bottom grade and alignment.
- B. Request in writing inspection by Engineer. Do not backfill pipes without giving the Engineer an opportunity for inspection. Provide minimum 24-hour notice.
- C. Do not use frozen materials for backfill construction.
- D. Maintain optimum moisture content of fill materials to attain required compaction density.
- E. Placement of foundation, embedment and final backfill for piping
  1. Installation shall conform to ASTM D2321, Section 7, except as specified below.
  2. Unless otherwise specified in the Contract Documents, the bedding and pipe backfill (in the pipe zone) material shall be clean, inert, free of foreign objects and gravel exceeding 50mm in size.
  3. Foundation material, if required by the Engineer, shall be moisture conditioned (as required), placed in loose layers no greater than 200 mm (8 inches), and compacted to the specified density.
  4. Embedment material shall be moisture conditioned (as required). Bedding shall be placed to the depth as shown on the Drawings. The bedding shall be compacted and graded to achieve structurally sound support and grade for the overlying pipes, structures, and ancillary components.
  5. Haunching shall be placed in loose layers no greater than 200 mm (8 inches) or 3/4 of the pipe diameter (whichever is smaller).
  6. Hand Work material under barrel of pipe without displacing pipes. Material shall be placed by hand tamping to ensure the material is well consolidated on both

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

sides of the pipe. Material shall be poured into the trench gradually so that tamping operations can be carried out simultaneously with placement.

7. Initial backfill shall be placed in loose layers no greater than 200 mm (8 inches). Hunching and initial backfill shall be placed in a manner which does not damage or displace the pipes.
8. If not specified in the Contract, install pipe warning tape and electrical locate wire per MMCD specifications.
9. Final backfill shall be moisture conditioned (as required), placed in loose layers no greater than 300 mm (12 inches), and compacted to the specified density. Place in a manner which does not damage or displace detector tape.
10. Excess backfill material from construction shall be stockpiled or disposed of onsite as directed by Engineer.
11. Excess backfill material provided by Contractor shall be removed from Site.

### 3.05 EMBANKMENT CONSTRUCTION

- A. Prior to initiating placement of embankment material, submit to the Engineer: laboratory test results for classification of material; laboratory test results for moisture/density relationships; mechanical equipment to be used for compaction; techniques for appropriate moisture conditioning; verification of trench bottom grade and alignment.
- B. Do not use frozen materials for embankment construction.
- C. Maintain optimum moisture content of fill materials to attain required compaction density.
- D. Embankment material shall be moisture conditioned (as required), placed in loose layers no greater than 200 mm (8 inches), and compacted to the specified density.
- E. Excess embankment material from construction shall be stockpiled or disposed of onsite as directed by Engineer.
- F. Excess embankment material provided by Contractor shall be removed from Site.

### 3.06 SUBGRADE AND FINISHED SURFACES

- A. All areas covered by the Work, including excavated and filled sections, shall be uniformly back-bladed to the subgrade, or finished ground elevations. The finish surface shall be reasonably smooth and free of irregularities.
- B. Area where excavation disrupted a surface system such as vegetation soil, surfacing, pavement, or cover system (such as topsoil, gravel, asphalt, and/or barrier soil), shall be restored to the original condition.

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

---

### 3.07 COMPACTION

A. General:

1. Compact soils to not less than the following percentages of maximum dry density for soils which exhibit a well-defined moisture density relationship determined in accordance with ASTM D 1557 (Modified Effort) and, where appropriate, not less than the following percentages of relative density for soils which do not exhibit a well-defined moisture density relationship determined in accordance with ASTM D 4254.
2. Soil for foundation, backfill, and embankment material shall be moisture conditioned as necessary to achieve the specified compaction densities.
3. Use compaction equipment capable of obtaining required densities in materials on project.

B. Foundation material: Compact to 95% Modified Proctor density.

C. Pipe embedment material: Compact to 90% Modified Proctor density

D. Pipe final backfill material: Compact to 90% Modified Proctor density.

E. Embankment material: Compact to 95% Modified Proctor density.

F. Gravel roads and ditches: Compact to minimum 95% Modified Proctor density

### 3.08 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed under provisions of Section 01 45 00 - QUALITY CONTROL.

B. Alignment and Grade Control

1. The Contractor shall provide grade and alignment control during excavation of trenches and during preparation of pipe bedding. The Contractor shall provide stakes or similar devices that display relevant information to control Work. Grade control devices shall be spaced no greater than 6 metres (~20 feet) apart over the entire surface and at grade breaks or changes in alignment. Laser level techniques are acceptable in lieu of grade staking.
2. Provide grade control device showing trench top and bottom of bedding layer design elevation, depth, and existing elevation. The Contractor shall monitor fine grading to verify grade and alignment tolerance are met.
3. The Contractor shall immediately set new grade markers to replace any which have been disturbed.

C. Compaction Control

Section 31 23 02

Earthwork for Landfill Gas System and Other Items

1. Monitoring compaction effort shall be conducted using the tests and frequencies specified in Table 3. Sample locations shall be in a grid pattern. The grid pattern shall be staggered between successive lifts.
2. If tests indicate Work does not meet specified requirements, additional tests shall be performed in the immediate vicinity of the failed test. This area shall be tested, the failed area localized and reconstructed in accordance with these Specifications and retested at no cost to the Owner.

| Required Tests and Observations on Compacted Soil |  |   |
|---|--|---|
| Parameter   | Test Method  | Minimum Testing Frequency                             |

Earthwork for Landfill Gas System and Other Items

| Required Tests and Observations on Compacted Soil   |             |                           |
|---|-------------|---------------------------|
| Parameter   | Test Method | Minimum Testing Frequency |
| <p>Notes:</p> <ol style="list-style-type: none"> <li>1. ASTM D4643 is microwave oven drying, ASTM D4944 is a calcium carbide gas pressure tester method, and ASTM D4959 is a direct heating method, ASTM D6938 is a nuclear method. Direct water content determination (ASTM D2216 is the standard against which nuclear, microwave, or other methods of measurements are calibrated for on-Site soils.</li> <li>2. In addition, at least one test should be performed each day soil is compacted and additional tests shall be performed in areas for which CQA personnel have reason to suspect inadequate compaction.</li> <li>3. Every tenth sample tested with ASTM D4643, D4944, D4959, or D6938, shall be also tested by direct oven drying (ASTM D2216) to aid in identifying any significant, systematic calibration errors.</li> <li>4. ASTM D2937 is the drive cylinder method and ASTM D6938 is a nuclear method. These methods, if used, shall be calibrated against the sand cone (ASTM D1556) or rubber balloon (ASTM D2167) for on-Site soils. Alternatively, the sand cone or rubber balloon method can be used directly.</li> <li>5. Every twentieth sample tested with D6938 shall also be tested (as close as possible to the same test location) with the sand cone (ASTM D1556) or rubber balloon (ASTM D2167) to aid in identifying any systematic calibration errors with D6938.</li> <li>6. ASTM D1587 is the method for obtaining an undisturbed sample. The section of undisturbed sample can be cut or trimmed from the sampling tube to determine bulk density. This method shall not be used for soils containing any particles greater than one sixth (<math>&gt; 1/6</math>) the diameter of the sample.</li> </ol> |             |                           |

### 3.09 WATERING FOR DUST CONTROL

- A. The Contractor shall water for dust control as directed by the Engineer. Water will be provided by the Owner from a source located at the project Site. The Owner will make water available for dust control at no cost. The Contractor shall not waste water. Separate payment will not be made for watering for dust control. All costs are incidental to the Contract and are responsibility of the Contractor. All costs shall be included in the Contract with prices for other bid items.

### 3.10 ACCEPTANCE

- A. The Work shall be accepted by the Engineer when:
1. Conformance test results meet the requirements of the Contract Documents.
  2. Required documentation from the field and laboratory testing laboratories has been received and accepted.

---

Section 31 23 02      Earthwork for Landfill Gas System and Other Items

---

3. All repairs have been completed to the Engineer's satisfaction.
4. Written certification documents, including as-built drawings, have been received by the Engineer.

**\*\* END OF SECTION \*\***

---

## Section 31 25 00 - Erosion Control

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This section includes supply, installation, and testing procedures for erosion control components. Erosion Control components shall be used as shown on the Drawings, including, but not limited to the following:
  - 1. Loose Straw shall be used for erosion control on slopes
  - 2. Straw wattles shall be used for erosion control in conjunction with Erosion Control Blankets
  - 3. Erosion Control Blankets to be used on steeper slopes above ditches

#### 1.02 REQUIREMENTS

- A. It is the Contractor's obligation to implement and maintain all necessary measures to control all impacted runoff flow from all Work areas and to prevent any impacts to previously closed areas, roads, and all other existing infrastructure.
- B. The Contractor shall also take all necessary measures to discharge the clean water from lined areas, into the storm water collection and conveyance system, with emphasis towards designed receiving locations.

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance Section 01 33 00 - Submittal Procedures.
- B. The Contractor shall submit a 1.0 x 1.0 m panel of the Erosion Control Blanket for inspection and testing. The sample shall be submitted uniformly rolled and shall be wrapped in plastic to protect the material from moisture and damage during shipment.
- C. The Contractor shall submit a 1.0 m long section of Straw Wattle for inspection and testing. The sample shall be wrapped in plastic to protect the material from moisture and damage during shipment.
- D. Provide complete product details, including the following:
  - 1. Name of manufacturer
  - 2. Product type
  - 3. Product grade

---

Section 31 25 00 Erosion Control

---

4. Lot number
5. Physical dimensions

**PART 2 PRODUCTS**

**2.01 LOOSE STRAW**

- A. Straw shall provide temporary, degradable erosion control until revegetation occurs. The seed free bales of hay or straw shall be bound with twine, not wire and the straw shall be placed loosely by hand.
- B. Straw to be manually spread to achieve uniform coverage of surface with a thin layer of loose straw. Maximum gaps in straw coverage must not be larger than 100 mm. A minimum of 50 percent of surface area shall be covered with straw fibres when examined in detail.

**2.02 STRAW WATTLES**

- A. Straw Wattles shall provide temporary, degradable slope interruption by slowing water velocity to reduce shear stress and soil erosion while enhancing revegetation for a functional longevity of at least 18 months (NOTE: functional longevity may vary depending upon climatic conditions, soil, geographic location, and elevation).
- B. The Straw Wattle consists of certified seed free agricultural straw inside a flexible and durable tubular netting with metal clips or knotted ends. The Straw Wattle shall meet the following specification:

**Straw Wattles for Erosion Control**

| Property                        | Specification                                       |
|---------------------------------|---|
| Product Name                    | 12 in (30.5 cm)                                     |
| Minimum Diameter                | 11.5 in (29.2 cm)                                   |
| Wattle Density ( $\pm 10\%$ )   | 3.82 lb./ft <sup>2</sup> (61.25 kg/m <sup>3</sup> ) |
| Wattle Dimension ( $\pm 10\%$ ) | 10.0 ft (3.1 m)                                     |

**2.03 COCONUT FIBER EROSION CONTROL BLANKET**

- A. The Coconut Fiber Erosion Control Blanket shall be a machine-produced blanket of 100 percent Coconut Fiber (minimum 8 oz/yd<sup>2</sup>) with double photodegradable polypropylene (PP) net and a functional longevity of up to 12 months. (NOTE: functional longevity may vary depending upon climatic conditions, soil, geographic location, and elevation).
- B. The Coconut Fiber Erosion Control Blanket shall meet the following specification:

Section 31 25 00 Erosion Control

**Coconut Fiber Erosion Control Blanket**

| Property            | ASTM            | Lower Value          | Higher Value         |
|---------------------|-----------------|----------------------|----------------------|
| Blanket Weight      | D6475           | 250 g/m <sup>2</sup> | 300 g/m <sup>2</sup> |
| Thickness           | D6526           | 6.5 mm               | 8.5 mm               |
| Tensile Strength MD | D6818           | 2.0 kN/m             | 5.5 kN/m             |
| Tensile Strength TD | D6818           | 1.5 kN/m             | 3.5 kN/m             |
| Elongation          | D6818           | 15.0 %               | 29%                  |
| Light Penetration   | ECTC TASC 00197 | 6% Open              | 8% Open              |
| Water Absorption    | D1117           | 200%                 | 250%                 |

- C. The blanket shall be of consistent thickness with the straw evenly distributed over the entire area of the blanket. The blanket shall be covered on the top and bottom side with lightweight photodegradable PP netting.

**PART 3 EXECUTION**

**3.01 PREPARATION**

- A. Place topsoil before installing Erosion Control, including any necessary application of lime, fertilizer, and seed.

**3.02 INSTALLATION**

- A. Follow manufacturer's installation instructions.

**\*\* END OF SECTION \*\***

---

## Section 31 32 21 - Geosynthetic Clay Liner

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. This specification covers the technical requirements for the furnishing and installation of the Geosynthetic Clay Liner described herein.
- B. On this project Geosynthetic Clay Liner (GCL) shall be used as shown on the Drawings.

#### 1.02 STANDARDS

- A. ASTM D5321 Standard Test Method for Determining the Coefficient of Soil and Geosynthetic or Geosynthetic and Geosynthetic Friction by the Direct Shear Method
- B. ASTM D5887 Standard Test Method for Measurement of Index Flux Through Saturated Geosynthetic Clay Liner Specimens Using a Flexible Wall Permeameter
- C. ASTM D5890 Standard Test Method for Swell Index of Clay Mineral Component of Geosynthetic Clay Liners
- D. ASTM D5891 Standard Test Method for Fluid Loss of Clay Component of Geosynthetic Clay Liners
- E. ASTM D5993 Standard Test Method for Measuring Mass Per Unit of Geosynthetic Clay Liners
- F. ASTM D6243 Standard Test Method for Determining the Internal and Interface Shear Resistance of Geosynthetic Clay Liner by the Direct Shear Method
- G. ASTM D6496 Standard Test Method for Determining Average Bonding Peel Strength Between the Top and Bottom Layers of Needle-Punched Geosynthetic Clay Liners
- H. ASTM D6768 Standard Test Method for Tensile Strength of Geosynthetic Clay Liners

#### 1.03 SUBMITTALS

- A. Any request to substitute an alternate GCL shall be submitted to the Engineer in writing as part of the Tender documents and shall include complete product specifications addressing all specifications outlined within this section. Also, the GCL manufacturer shall provide at least three references encompassing at least 10 Ha of GCL used in similar projects.
- B. Following award of the Contract, the Contractor shall submit a 1.0 x 1.0 m panel of candidate GCL for inspection and testing. The sample GCL panel shall be submitted

---

Section 31 32 21      Geosynthetic Clay Liner

---

to the Engineer within 5 days of commencing the Work. The geotextile shall be submitted uniformly rolled and shall be wrapped in plastic to protect the material from moisture and damage during shipment. Samples shall be externally tagged for easy identification. External tagging shall include:

1. Name of manufacturer
  2. Product type
  3. Product grade
  4. Lot number
  5. Physical roll dimensions (length and width)
- C. The Contractor shall supply the following information for any alternate GCL following the award of the Contract. The information shall be supplied to the Engineer within 5 days of commencing the Work. Factory test results must be acceptable to Engineer prior to shipment of GCL.
1. The claimed minimum roll values of the GCL for each of the properties listed herein.
  2. These claims shall be supported by laboratory test results from the manufacturer.
- D. The Contractor shall provide the Engineer with manufacturing QA/QC certifications for each shipment of GCL. The certifications shall be signed by a responsible party employed by the GCL manufacturer and shall include:
1. Certificates of analysis for the bentonite clay used in GCL production demonstrating compliance with the parameters swell index and fluid loss shown in this section.
  2. Manufacturer's test data for finished GCL product(s) of bentonite mass/area, GCL tensile strength and GCL peel strength (reinforced only) demonstrating compliance with the index parameters shown in this section.
  3. GCL lot and roll numbers supplied for the project (with corresponding shipping information).
  4. Manufacturer's test data for finished GCL product(s) including GCL index flux, permeability and hydrated internal shear strength data demonstrating compliance with the performance parameters listed in this section shall be made available upon request by the Engineer.

Section 31 32 21 Geosynthetic Clay Liner

- E. As part of the Tender, the Contractor shall provide the certified records for successful installation of 50 HA of GCL and 5 years of experience in similar applications, along with three current references regarding the proposed installer of the GCL.
- F. As part of the subgrade approval process, prior to the first layer of geosynthetic material installation (including geotextile, GCL or geomembranes), the Contractor shall submit to the Engineer a Subgrade Conformance Certificate, clearly identifying the subject area and in a format agreed with the Engineer, that includes written confirmation that the subgrade preparation has been completed as per the geomembrane manufacturer and geomembrane installer requirements. The Subgrade Conformance Certificate shall be submitted a minimum 24h prior to expected geosynthetic installation and resubmitted if in the opinion of the Engineer, the subgrade has been altered in between the Certificate submission and the actual geosynthetic installation.

**PART 2 Products**

**2.01 GCL**

- A. The GCL shall consist of a layer of natural sodium bentonite clay encapsulated between two lightweight nonwoven geotextiles and shall comply with all of the criteria listed in this Section.
- B. The minimum acceptable dimensions of full-size GCL panels shall be 45.7 m (150 feet) in length. Short rolls (those manufactured to a length greater than 21 m (70 feet) but less than a full-length roll) may be supplied at a rate no greater than 3 per truckload or 3 rolls every 3,500 square meters (36,000 ft<sup>2</sup>) of GCL, whichever is less.
- C. A 150 mm (6-inch) overlap guideline shall be imprinted on both edges of the upper geotextile component of the GCL as a means for providing quality assurance of the overlap dimension. Lines shall be printed in easily visible, non-toxic ink.
- D. The reinforced GCL and its components shall have the properties shown in the Table below.

| Material Property                   | Test Method | Test Frequency ft <sup>2</sup> (m <sup>2</sup> ) | Required Values                                       |
|-------------------------------------|-------------|--|---|
| Top and Bottom Non-woven Geotextile | ASTM D 5261 | 200,000 ft <sup>2</sup> (20,000 m <sup>2</sup> ) | 200 g/m <sup>2</sup> (6 oz/yd <sup>2</sup> )          |
| Bentonite Swell Index               | ASTM D 5890 | 1 per 50 tonnes                                  | 24 mL/2g min.   |
| Bentonite Fluid Loss                | ASTM D 5891 | 1 per 50 tonnes                                  | 18 mL max.  |
| Bentonite Mass/Area                 | ASTM D 5993 | 40,000 ft <sup>2</sup> (4,000 m <sup>2</sup> )   | 0.75 lb./ft <sup>2</sup> (3.6 kgm <sup>2</sup> ) min. |
| GCL Grab Strength                   | ASTM D 6768 | 200,000 ft <sup>2</sup> (20,000 m <sup>2</sup> ) | 45 lbs./in (78 N/cm) min                              |

Section 31 32 21 Geosynthetic Clay Liner

|                                      |             |  |  |
|--------------------------------------|-------------|--|--|
| GCL Peel Strength                    | ASTM D 6496 | 40,000 ft <sup>2</sup> (4,000 m <sup>2</sup> ) | 3.5 lbs./in (6.1 N/cm) min                                   |
| GCL Index Flux                       | ASTM D 5887 | Weekly   | 1 x 10 <sup>-8</sup> m <sup>3</sup> /m <sup>2</sup> /sec max |
| Hydraulic Conductivity               | ASTM D 5887 | Weekly   | 5 x 10 <sup>-9</sup> cm/sec max                              |
| GCL Hydrated Internal Shear Strength | ASTM D 6243 | Periodic                                       | 500 psf (24 kPa) typical @ 200 psf                           |

## 2.02 PACKAGING

- A. The GCL shall be wound around a rigid core whose diameter is sufficient to facilitate handling. The core is not necessarily intended to support the roll for lifting but should be sufficiently strong to prevent collapse during transit.
- B. All rolls shall be labeled and bagged in packaging that is resistant to photodegradation by ultraviolet (UV) light.

## 2.03 ACCESSORY BENTONITE

- A. The granular bentonite sealing clay used for overlap seaming, penetration sealing and repairs shall be made from the same natural sodium bentonite as used in the GCL and shall be as recommended by the GCL manufacturer. Seaming of GCLs shall be conducted in accordance with the manufacturer's guidelines.

# PART 3 EXECUTION

## 3.01 EARTHWORK

- A. Any earthen surface upon which the GCL is installed shall be prepared and compacted to ensure the surface shall be smooth, firm, and unyielding, and free of:
  - 1. Vegetation.
  - 2. Construction Debris.
  - 3. Sticks.
  - 4. Sharp rocks.
  - 5. Void spaces.
  - 6. Ice.
  - 7. Abrupt elevation changes.
  - 8. Standing water.

---

Section 31 32 21      Geosynthetic Clay Liner

---

- 9. Cracks larger than 6 mm in width.
- 10. Any other foreign matter that could damage the GCL.
- B. On a continuing basis, the Engineer shall certify acceptance of the subgrade before GCL placement.
- C. It shall be the installer's responsibility thereafter to indicate to the Engineer any change in the condition of the subgrade that could cause the subgrade to be out of compliance with any of the requirements listed in this Section.

### 3.02 GCL PLACEMENT

- A. Equipment, which could damage the GCL, shall not be allowed to travel directly on it. If the installation equipment causes rutting of the subgrade, the subgrade must be restored to its originally accepted condition before placement continues.
- B. Care must be taken to minimize the extent to which the GCL is dragged across the subgrade in order to avoid damage to the bottom surface of the GCL. A temporary geosynthetic subgrade covering commonly known as a slip sheet or rub sheet may be used to reduce friction damage during placement.
- C. All GCL panels should lie flat on the underlying surface, with no wrinkles or fold, especially at the exposed edges of the panels.
- D. Only as much GCL shall be deployed as can be covered at the end of the working day. The GCL shall not be left uncovered overnight. If the GCL is hydrated when no confining stress is present, it may be necessary to remove and replace the hydrated material. The Engineer and GCL supplier should be consulted for specific guidance if premature hydration occurs.

### 3.03 SEAMING

- A. The GCL seams are constructed by overlapping their adjacent edges. Seams at the ends of the panels should be constructed such that they are shingled in the direction of the grade to prevent the potential for runoff flow to enter the overlap zone. Care should be taken to ensure that the overlap zone is not contaminated with loose soil or other debris.
- B. The minimum dimension of the longitudinal overlap should be 150 mm. If the GCL is manufactured with a grooved cut in the nonwoven geotextile that allows bentonite to freely extrude into the longitudinal overlap then no bentonite-enhanced seam is required for this overlap. If the GCL does not have a grooved cut in one of the nonwoven geotextiles in the longitudinal overlap, then bentonite-enhanced seams are required as described below. End-of-roll overlapped seams should be constructed with a minimum overlap of 600 mm. End-of-roll overlapped seams for all reinforced GCL seams require bentonite-enhanced seams as described below.

---

Section 31 32 21      Geosynthetic Clay Liner

---

- C. Bentonite-enhanced seams are constructed between the overlapping adjacent panels as follows. The underlying edge of the longitudinal overlap is exposed and then a continuous bead of granular sodium bentonite is applied along a zone defined by the edge of the underlying panel and the 150 mm line. The granular bentonite shall be applied at a minimum application rate of 0.4 kg/m. A similar bead of granular sodium bentonite is applied at the end-of-roll overlap.

#### 3.04 DETAIL WORK

- A. The GCL shall be sealed around penetrations and embedded structures in accordance with the Drawings and the GCL Manufacturer.
- B. Cutting the GCL should be performed using a sharp utility knife. Frequent blade changes are recommended to avoid damage to the geotextile components of the GCL during the cutting process.

#### 3.05 DAMAGE REPAIR

- A. If the GCL is damaged (torn, punctured, perforated, etc.) during installation, it may be possible to repair it by cutting a patch to fit over the damaged area. The patch shall be obtained from a new GCL roll and shall be cut to size such that a minimum overlap of 300 mm is achieved around all of the damaged area. Granular bentonite or bentonite mastic should be applied around the damaged area prior to placement of the patch. It may be desirable to use an adhesive to affix the patch in place so that it is not displaced during cover placement.

#### 3.06 COVER PLACEMENT

- A. Cover material shall be free of angular stones or other foreign matter that could damage the GCL. Cover material should be approved by the Engineer with respect to particle size, uniformity and chemical compatibility. Cover material with high concentrations of calcium (e.g., limestone, dolomite) are not acceptable.
- B. Cover material shall be placed over the GCL using construction equipment that minimizes stresses on the GCL (D3-D4 LGP Cat at maximum). A minimum thickness of 300 mm of cover should be maintained between the equipment tires/tracks and the GCL at all times during the covering process. This thickness recommendation does not apply to frequently trafficked areas or roadways, for which a minimum thickness of 600 mm is required.
- C. Cover material should be placed in a manner that prevents the soil from entering the GCL overlap zones. Cover soil shall be pushed up slopes, not down slopes, to minimize tensile forces on the GCL.
- D. Although direct vehicular contact with the GCL is to be avoided, lightweight, low ground pressure vehicles (such as 4-wheel all-terrain vehicles) may be used to facilitate the installation of any geosynthetic material placed over the GCL. The GCL supplier or Engineer should be contacted with specific recommendations on the appropriate procedures in this situation.

---

Section 31 32 21      Geosynthetic Clay Liner

---

**\*\* END OF SECTION \*\***

---

## Section 31 32 23 - Geogrid

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Supply, installation and testing procedures for integrally formed polypropylene Biaxial Geogrid and high-density polyethylene Uniaxial Geogrid. The geogrids shall be used as shown on the Drawings.

#### 1.02 STANDARDS

- A. ASTM D6637 True Resistance to Elongation and Loss of Load Capacity
- B. ASTM D5732 Resistance to Bending Force
- C. ASTM D5818 Sampling for Resistance to Loss of Load Capacity
- D. ASTM D4355 Resistance to loss of load capacity or structural integrity when subjected to UV

#### 1.03 SUBMITTALS

- A. Any request to substitute an alternate geogrid shall be submitted to the Engineer in writing as part of the Tender documents and shall include complete product specifications addressing all specifications outlined within this section.
- B. Following award of the Contract, the Contractor shall submit a 1.0 x 1.0 m panel of each candidate geogrid for inspection and testing. The sample geogrid panel shall be submitted to the Engineer within 5 days of commencing the Work. The geogrid shall be submitted uniformly rolled and shall be wrapped in plastic to protect the material from damage during shipment. Samples shall be externally tagged for easy identification. External tagging shall include:
  - 1. Name of manufacturer
  - 2. Product type
  - 3. Product grade
  - 4. Lot number
  - 5. Physical roll dimensions (length and width)
- C. The Contractor shall supply the following information for any alternate geogrid following the award of the Contract. The information shall be supplied to the Engineer

Section 31 32 23 Geogrid

within 5 days of commencing the Work. Factory test results must be acceptable to Engineer prior to shipment of geogrid.

1. The claimed minimum roll values of the geogrid for each of the properties listed herein.
2. These claims shall be supported by laboratory test results from the manufacturer, including certified laboratory test data for aperture dimensions, tensile strength, puncture strength, ultimate tensile strength, Carbon Black content, junction efficiency, flexural stiffness, aperture stability, resistance to installation damage, resistance to long term degradation, and resistance to UV degradation at a minimum frequency of 1 test per 1 ha of geogrid produced.

#### 1.04 SEQUENCING AND SCHEDULING

- A. Roll delivery and installation shall be coordinated with the work in other sections to prevent damage to the geogrid.
- B. The geogrid shall be placed before placement of any subsequent soil, gravel or geosynthetic layer. As soon as an area large enough has been completed and approved by the Engineer, the Contractor may begin installing the overlying layers.

### PART 2 PRODUCTS

#### A. Biaxial Polypropylene Geogrid

1. To achieve the performance requirements, the geogrid shall be an Integrally Formed Polypropylene Biaxial Geogrid with physical properties of the biaxial geogrid that meet or exceed the following specifications:

**Biaxial Polypropylene Geogrid: BX1500 or equivalent**

| Property                          | Unit        | Required Value | Test Method                 | Standard |
|-----------------------------------|-------------|----------------|-----------------------------|----------|
| Aperture Dimension                | mm          | 25             | ASTM D4759                  | Minimum  |
| Rib Thickness                     | mm          | 1.70           | ASTM D4759                  | Minimum  |
| Tensile Strength (@2% Strain)     | KN/m        | 8.0            | ASTM D6637                  | Minimum  |
| Tensile Strength (@5% Strain)     | KN/m        | 17.0           | ASTM D6637                  | Minimum  |
| Junction Efficiency               | %           | 90             | GRI-GG-05                   | Minimum  |
| Flexural Stiffness                | Mg-cm       | 2,000,000      | ASTM D5732                  | Minimum  |
| Aperture Stability                | m-N/deg     | 0.75           | U.S. Army Corp of Engineers | Minimum  |
| Resistance to Installation Damage | %SC/%SW/%GP | 92/90/87       | ASTM D6637                  | Minimum  |

Section 31 32 23 Geogrid

| Property  | Unit | Required Value | Test Method | Standard |
|---|------|----------------|-------------|----------|
| Resistance to Long Term Degradation                                   | %    | 100            |             | Minimum  |
| Resistance to UV degradation  | %    | 100            |             | Minimum  |
| Note: SC= Clayey Sand, SW= Well Graded Sand, GP= Poorly Graded Gravel |      |                |             |          |

## 2.02 UNIAXIAL HIGH DENSITY POLYETHYLENTE GEOGRID

- A. To achieve the performance requirements, the geogrid shall be an Integrally Formed high density polyethylene Uniaxial Geogrid with physical properties of uniaxial geogrid that meet or exceed the following specifications:

### Uniaxial Polypropylene Geogrid: UX1600 or equivalent

| Property                            | Unit  | Required Value | Test Method               | Standard |
|-------------------------------------|-------|----------------|---------------------------|----------|
| Tensile Strength (@5% Strain)       | KN/m  | 58             | ASTM D6637                | Minimum  |
| Ultimate Tensile Strength           | KN/m  | 144            | ASTM D6637                | Minimum  |
| Junction Efficiency                 | %     | 135            | GRI-GG-05                 | Minimum  |
| Flexural Stiffness                  | Mg-cm | 6,000,000      | ASTM D5732                | Minimum  |
| Resistance to long term degradation | %     | 100            | EPA 9090 Emersion Testing | Minimum  |
| Resistance to UV degradation        | %     | 95             | ASTM D5732                | Minimum  |

## 2.03 GEOGRID GENERAL REQUIREMENTS

- A. The geogrid shall be integrally formed biaxial and uniaxial geogrid made of polymer.
- B. The geogrid shall also contain carbon black or inhibitors to limit degradation due to ultraviolet (UV) light exposure.
- C. The geogrid materials supplied under these specifications shall be first quality products specifically manufactured for reinforcement applications and shall have been demonstrated by prior use their suitability for such applications.
- D. The geogrid must achieve sufficient interface shear strength between the overlying or underlying layers to ensure a factor of safety of 1.5 or better under worst case static loadings and steepest slope geometries.

## PART 3 EXECUTION

### 3.01 DELIVERY, IDENTIFICATION AND STORAGE

---

Section 31 32 23      Geogrid

---

- A. Geogrid shall be delivered to the jobsite in roll form with each roll individually identified and normally measuring 3.0 m or 4.0 m in width and 50.0 m in length. A typical truckload quantity is 260 to 350 rolls.
- B. Geogrid rolls shall be stored in a manner that protects them from the elements. If stored outdoors, they shall be elevated and protected with an opaque cover in an area free of mud and / or ponded water.
- C. Each roll shall be clearly tagged with the following information:
  - 1. Name of manufacturer
  - 2. Product type
  - 3. Product grade
  - 4. Lot number
  - 5. Physical dimensions (length and width)
- D. The delivery of any rolls not labeled or packaged in the specified manner shall be reason for rejection of those rolls.
- E. The geogrid shall be delivered to the Site in undamaged condition.
- F. Geogrid shall be stored above 5 degree Celsius.
- G. Mud, wet cement, epoxy, and any other materials that may come into contact and affix to geogrid material should be prevented from making contact.

### 3.02 GEOGRID INSTALLATION

- A. The surface base shall be approved by the Engineer prior to geogrid placement. Soil/material surfaces on which the geogrid is to be placed shall be prepared as approved by the Engineer.
- B. The Contractor shall not operate equipment directly on the geogrid. Trimming of the geogrid shall be performed in a manner that will not damage the geomembrane or other materials.
- C. The reinforcement shall be pulled taut and anchored prior to backfill placement on the geogrid.
- D. On slopes, the geogrid shall be anchored at the top and unrolled down the slope.
- E. The geogrid shall be handled in a way that prevents any damage to the fabric. Any geogrid damaged on-Site shall be repaired or replaced, at the discretion of the Engineer.
- F. Construction equipment must not operate directly on top of the geogrid.

---

Section 31 32 23      Geogrid

---

- G. Backfill shall be placed, spread and compacted in such a manner that minimizes the development of slack in the geogrid.

**\*\* END OF SECTION \*\***

---

## Section 31 32 19 - Geotextiles

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Supply the following geotextiles for use as shown on the Drawings.

#### 1.02 STANDARDS

- A. ASTM D3786 Hydraulic Bursting Strength of Fabrics (Mullen Burst)
- B. ASTM D4533 Trapezoid Tearing Strength of Geotextiles
- C. ASTM D4632 Test Method for Breaking Load and Elongation of Geotextiles (Grab Method)
- D. ASTM D4751 Apparent Opening Size of Geotextiles
- E. ASTM D4833 Test Method for Index Puncture-Resistance of Geotextiles, Geomembranes, and Related Products.
- F. ASTM D4873 Guide for Identification, Storage and Handling of Geotextiles
- G. ASTM D4491 Permittivity and Water Flow Rate

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Any request to substitute an alternate geotextile shall be submitted to the Engineer in writing as part of the tender documents and shall include complete product specifications addressing all Specifications outlined within this section.
- C. Following award of the Contract, the Contractor shall submit a 1.0 x 1.0 m panel of each geotextile material for inspection and testing. The geotextile shall be submitted uniformly rolled and shall be wrapped in plastic to protect the material from moisture and damage during shipment. Samples shall be externally tagged for easy identification.
- D. Provide product details for each material including:
  - 1. Name, address and contact information of manufacturer and distributor (if different)
  - 2. Product type including technical specifications and grade
  - 3. Lot number

---

Section 31 32 19      Geotextiles

---

4. Physical roll dimensions (length and width)
- E. The Contractor shall supply the following information for any alternate geotextiles following the award of the Contract. Factory test results must be acceptable to Engineer prior to shipment of geotextiles.
  1. The claimed minimum roll values of the geotextile for each of the properties listed herein (except Apparent Opening Size (AOS))
  2. The maximum roll values for the candidate geotextile for AOS based on the standard.
  3. These claims shall be supported by laboratory test results from the manufacturer, including certified laboratory test data for unit weight, tensile strength, puncture strength, Mullen burst strength, and trapezoidal tear strength measured in accordance with the procedures listed herein at a minimum frequency of 1 test per 1 ha of geotextile produced.
- F. As part of the Tender, the Contractor shall provide the certified records for successful installation of 100 HA of geotextile and 5 years of experience in similar applications, along with three current references regarding the proposed installer of the geotextile.
- G. As part of the subgrade approval process, prior to the first layer of geosynthetic material installation (including geotextile, GCL or geomembranes), the Contractor shall submit to the Engineer a Subgrade Conformance Certificate, clearly identifying the subject area and in a format agreed with the Engineer, that includes written confirmation that the subgrade preparation has been completed as per the geomembrane manufacturer and geomembrane installer requirements. The Subgrade Conformance Certificate shall be submitted a minimum 24h prior to expected geosynthetic installation and resubmitted if in the opinion of the Engineer, the subgrade has been altered in between the Certificate submission and the actual geosynthetic installation.

#### 1.04 SEQUENCING AND SCHEDULING

- A. Roll delivery and installation shall be coordinated with the Work in other sections to prevent over-exposed and damage to the geotextile.
- B. On all areas where black geotextile is used to cover white, reflective geomembrane, the geotextile shall not be left exposed for a period **longer than ten (10) days** before it is completely covered by overlying layers or temporarily white reflective materials.

### PART 2 PRODUCTS

#### 2.01 NON-WOVEN GEOTEXTILE – 8 OZ LIGHT WEIGHT

- A. Due to the coarse nature of the drain rock on which the geotextile may be placed and the significant traffic loads during construction, the fabric must provide a “high”

Section 31 32 19 Geotextiles

degree of geotextile survivability. To achieve this performance requirement, the geotextile shall be a nonwoven needle punched geotextile with physical properties that meet or exceed the following Specifications.

**Light Weight Nonwoven Geotextile (8 oz./yd<sup>2</sup>)**

| Property                   | Required Value       | Test Method |
|----------------------------|----------------------|-------------|
| Unit weight                | 270 g/m <sup>2</sup> | ASTM D5261  |
| Thickness                  | 2.2 mm               | ASTM D5199  |
| Grab Tensile Strength      | 975 N                | ASTM D4632  |
| Grab Tensile Elongation    | 50%                  | ASTM D4632  |
| Puncture                   | 2,600 N              | ASTM D6241  |
| Trapezoid Tear Strength    | 400 N                | ASTM D4533  |
| Apparent Opening Size      | 180µm                | ASTM D4751  |
| UV Resistance (% @ 500 hr) | 70%                  | ASTM D4355  |

2.02 NON-WOVEN GEOTEXTILE – 12 OZ HEAVY WEIGHT

- A. Due to the coarse and angular nature of the drain rock / rip rap on which the geotextile may be placed and extreme surcharge or traffic loads expected during and after construction, the fabric must provide a “very high” degree of geotextile survivability in order to protect the geomembrane liner. To achieve this performance requirement, the geotextile shall be a nonwoven needle punched geotextile with physical properties that meet or exceed the following specifications:

**Heavy Weight Nonwoven Geotextile (12 oz./yd<sup>2</sup>)**

| Property                   | Required Value       | Test Method |
|----------------------------|----------------------|-------------|
| Unit Weight                | 405 g/m <sup>2</sup> | ASTM D5261  |
| Thickness                  | 3.0 mm               | ASTM D5199  |
| Grab Tensile Strength      | 1,450 N              | ASTM D4632  |
| Grab Tensile Elongation    | 50%                  | ASTM D4632  |
| Puncture                   | 4,000 N              | ASTM D6241  |
| Trapezoid Tear Strength    | 550 N                | ASTM D4533  |
| Apparent Opening Size      | 150 µm               | ASTM D4751  |
| UV Resistance (% @ 500 hr) | 70%                  | ASTM D4355  |

2.03 NON-WOVEN GEOTEXTILE – 16 OZ HEAVY WEIGHT

Section 31 32 19 Geotextiles

- A. Due to the coarse and angular nature of the drain rock / rip rap on which the geotextile may be placed and extreme surcharge or traffic loads expected during and after construction, the fabric must provide a “very high” degree of geotextile survivability in order to protect the geomembrane liner. To achieve this performance requirement, the geotextile shall be a nonwoven needle punched geotextile with physical properties that meet or exceed the following specifications:

**Heavy Weight Nonwoven Geotextile (16 oz./yd<sup>2</sup>)**

| Property                   | Required Value       | Test Method |
|----------------------------|----------------------|-------------|
| Unit Weight                | 540 g/m <sup>2</sup> | ASTM D5261  |
| Thickness                  | 4.0 mm               | ASTM D5199  |
| Grab Tensile Strength      | 1,850 N              | ASTM D4632  |
| Grab Tensile Elongation    | 50%                  | ASTM D4632  |
| Puncture                   | 5,200 N              | ASTM D6241  |
| Trapezoid Tear Strength    | 660 N                | ASTM D4533  |
| Apparent Opening Size      | 150 µm               | ASTM D4751  |
| UV Resistance (% @ 500 hr) | 70%                  | ASTM D4355  |

2.04 GEOTEXTILES GENERAL REQUIREMENTS

- A. The geotextile shall be free of holes, tears, defects, and patch repairs of defects. The geotextile shall be composed of needle punched, discontinuous (staple) fibers or continuous fibers. Fibers used in the manufacturing of the geotextile shall consist of a material that is at least 85 percent by weight polyolefins, polyesters (PET), or polyamides.
- B. The geotextile and threads used in sewing the geotextile shall be chemically resistant to commonly encountered municipal landfill leachate, rot and mildew. The geotextile and threads used in sewing the geotextile shall also contain stabilizers or inhibitors to limit degradation due to ultraviolet (UV) light exposure. Polymeric thread used for sewing shall exhibit chemical and UV resistance equal to or exceeding that of the geotextile.
- C. The geotextile materials supplied under these Specifications shall be first quality products specifically manufactured for cushion applications and shall have been demonstrated by prior use their suitability for such applications.
- D. The geotextile must achieve sufficient interface shear strength between the overlying or underlying geomembrane and the underlying and overlying drainage layers to ensure a factor of safety of 1.5 or better under worst case static loadings and steepest slope geometries.

**PART 3      EXECUTION**

**3.01 DELIVERY, IDENTIFICATION AND STORAGE**

- A. The geotextile shall be labeled, stored, and handled in accordance with ASTM D4873. The geotextile shall be kept dry and wrapped in waterproof wrapping such that it is protected from UV light and the elements during shipping and storage. Geotextile rolls shall be stored in a manner that protects them from the elements. If stored outdoors, they shall be elevated and protected with a waterproof, opaque cover in an area free of mud and / or ponded water.
- B. Each roll shall be clearly tagged with the following information:
  - 1. Name of manufacturer
  - 2. Product type
  - 3. Product grade
  - 4. Lot number
  - 5. Physical dimensions (length and width)
- C. The delivery of any rolls not labeled or packaged in the specified manner shall be reason for rejection of those rolls.
- D. The geotextile shall be delivered to the Site in undamaged condition.

**3.02 GEOTEXTILE INSTALLATION**

- A. The surface base shall be approved by the Engineer prior to geotextile placement. Soil surfaces on which the geotextile is to be placed shall be graded and compacted to a smooth surface free of debris or obstructions that may damage the geotextile. All rocks, sticks and other solid particles larger than 50 mm in diameter that protrude from the smooth surface shall be removed unless approved otherwise by the Engineer.
- B. Care shall be taken not to entrap stone, excessive dust, or moisture in the geotextile. The Contractor shall not operate equipment directly on the Geotextile. Trimming of the geotextile shall be performed in a manner that will not damage the geomembrane or other underlying materials.
- C. The Geotextile shall be laid smooth and free of tension with a minimum of wrinkles and creases so that the geotextile contacts with the underlying soil or geosynthetic is maximized. Geotextile installation shall be performed to the satisfaction of the Engineer.
- D. On slopes, the geotextiles shall be anchored at the top and unrolled down the slope. In the presence of wind, all geotextiles shall be weighted with sandbags or other

---

Section 31 32 19      Geotextiles

---

material which will not damage the geotextile. Geotextile uplifted by wind may be reused upon approval by the Engineer.

- E. The geotextile shall be handled in a way that prevents any damage to the fabric. Any geotextile damaged on-Site shall be repaired or replaced, at the discretion of the Engineer.
- F. On slopes less than or equal to 10H: 1V adjacent geotextile panels may be sewn, heat bonded or overlapped as required by the Engineer. For overlapped seams, overlap distances shall be a minimum of 450 mm. If separation of overlapping panels occurs, the Engineer may request that the geotextile be seamed in the field, where he sees fit. All field seams shall be fabricated so that stitches remain on top of the seam, visible for inspection.
- G. On slopes steeper than 10H:1V the geotextile is to be installed with the long axis of each panel oriented in the up-slope direction, except in ditches where the direction of installation shall be as specified by the Engineer onsite. As well, adjacent geotextile panels shall be sewn on slopes greater than 10H:1V or bonded with other methods (e.g. heat welding) that ensure seam strengths of more than 50 psi. All seams shall be oriented parallel to (in the direction of) the slope. Seams constructed perpendicular or transverse to the direction of the slope will not be accepted, except on benches and berms.
- H. The Geotextile shall not be placed on any slope's steeper than 2.0 H:1V, unless directed to do so by the Engineer.
- I. In trenches, the Geotextile shall be placed with sufficient slack to ensure that good contact with the trench bottom and sides will be maintained when the trench is fully backfilled.
- J. During installation, the Geotextile may be held in place with sand bags or tires. Staples, rods, nails or other penetrating devices shall not be permitted.
- K. The Geotextile panels shall not be placed on wet or muddy surfaces, except where approved to do so by the Engineer.
- L. Any torn, punctured, flawed, deteriorated or otherwise damaged Geotextile shall be repaired. Any interfering material shall first be removed as necessary to expose the Geotextile. The damage shall be repaired by placing a patch of undamaged Geotextile over the damaged area with a minimum overlap of 500 mm in all directions. The patch shall be secured in place with a thermal wedge welder or sewn seam.
- M. Construction equipment must not operate directly on top of the Geotextile. A minimum of 300 mm of aggregate finer than 25 mm shall be spread on top of the Geotextile before construction equipment can operate on the surface.
- N. Other than equipment used to deploy geosynthetics, or as approved by Engineer in writing, no other construction equipment or vehicles shall operate directly on top of the Geotextile. Unless otherwise specified, a minimum 600mm layer of cover

---

Section 31 32 19      Geotextiles

---

material shall be spread on top of the Geotextile before construction equipment can operate on the surface. For additional details and layer thickness, refer to minimum lift thickness and ground pressure table from specifications.

- O. The Geotextile shall not be covered with other materials prior to inspection and approval by the Engineer. The Geotextile shall be examined over the entire surface after installation to ensure that no potentially harmful objects are present.
- P. No open flame

**\*\* END OF SECTION \*\***

## Section 31 32 20 - HDPE Geomembrane

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Includes all labour, equipment and materials to supply and install the white 60 mil thick, double-textured HDPE Geomembrane for the Liner system.

#### 1.02 STANDARDS

- A. ASTM D638 Test Method for Tensile Properties of Plastics
- B. ASTM D751 Method of Testing Coated Fabrics
- C. ASTM D1004 Test Method for Initial Tear Resistance of Plastic Film and Sheeting
- D. ASTM D1204 Test Method for Linear Dimensional Changes of Non-rigid Thermoplastic Sheeting or Film at Elevated Temperature.
- E. ASTM D1238 Test Method for Flow Rates of Thermoplastics by Extrusion Plastometer.
- F. ASTM D1505 Test Method for Density of Plastics by the Density Gradient Technique.
- G. ASTM D1603 Test Method for Carbon Black in Olefin Plastics
- H. ASTM D1693 Test Method for Environmental Stress-Cracking of Ethylene Plastics.
- I. ASTM D3015 Practice for Microscopical Examination of Pigment Dispersion in Plastic Compounds.
- J. ASTM D4437 Practice for Determining the Integrity of Field Seams Used in Joining Flexible Polymeric Sheet Membranes.
- K. ASTM D4833 Test Method for Index Puncture-Resistance of Geotextiles, Geomembranes, and Related Products.
- L. ASTM D5994 Standard Test Method for Measuring Core Thickness of Textured Geomembrane

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Any request to substitute an alternate geomembrane shall be submitted to the Engineer in writing as part of the Tender documents and shall include complete product specifications addressing all Specifications outlined within this section.

Section 31 32 20

HDPE Geomembrane

---

- C. Following award of the Contract, the Contractor shall submit a 1.0 x 1.0 m panel of candidate geomembrane for inspection and testing. The Geomembrane shall be submitted uniformly rolled and shall be wrapped in plastic to protect the material from moisture and damage during shipment. Samples shall be externally tagged for easy identification.
- D. Provide product details for each material including:
  - 1. Name, address and contact information of manufacturer and distributor (if different)
  - 2. Product type including technical specifications and grade
  - 3. Lot number
  - 4. Physical roll dimensions (length and width)
- E. The Contractor shall supply the following information for any alternate geomembranes following the award of the Contract. The information shall be supplied to the Engineer within 5 days of commencing the Work. Factory test results must be acceptable to Engineer prior to shipment of geomembranes.
  - 1. The claimed minimum roll values of the geomembrane for each of the properties listed herein. These claims shall be supported by laboratory test results.
  - 2. Shear strength test results from a qualified geotechnical testing laboratory specializing in geosynthetic interface testing. The results must confirm that interface shear strength properties meet or exceed the Specifications herein.
- F. Prior to commencing geomembrane installation, a seam installation and testing demonstration is to be performed for each type of seam required. The Engineer is to be present for this trial. At this time, the Contractor is also to submit a Geomembrane Sheet layout with proposed size, number, position, and sequence of sheet placement, and location of field seams for approval by the Engineer. The geomembrane layout configuration shall be established to minimize seaming.
- G. As part of the Tender, the Contractor shall provide the following information regarding the proposed installer of the geomembrane
  - 1. Certified records of successfully installing a minimum of 100 Ha of LLDPE or HDPE geomembrane and 5 years of experience in similar installation applications
  - 2. Proof of certification by the International Association of Geosynthetic Installers (IAGI) Welder Certification Program.

---

Section 31 32 20 HDPE Geomembrane

---

3. Proof that each installer operating welding equipment on this project shall have a minimum of two years of welding experience welding a minimum of 10,000 m of seams in HDPE and/or LLDPE materials.
  4. Information on five most recent major LLDPE and/or HDPE geomembrane installations (each project exceeding at least 4 Ha in area) that was field seamed using a single or double hot-wedge fusion weld, including project location, installation area (ha), material thickness, seaming method, Owner's name and telephone number, and date completed.
- H. As part of the subgrade approval process, prior to the first layer of geosynthetic material installation (including geotextile, GCL or geomembranes), the Contractor shall submit to the Engineer a Subgrade Conformance Certificate, clearly identifying the subject area and in a format agreed with the Engineer, that includes written confirmation that the subgrade preparation has been completed as per the geomembrane manufacturer and geomembrane installer requirements. The Subgrade Conformance Certificate shall be submitted a minimum 24h prior to expected geosynthetic installation and resubmitted if in the opinion of the Engineer, the subgrade has been altered in between the Certificate submission and the actual geosynthetic installation.
- I. The Contractor will submit the following to the Engineer upon completion of geomembrane installation:
1. Certificate stating the geomembrane has been installed in accordance with the manufacturer requirements and Contract Documents.
  2. Material and installation warranties.
  3. As-built drawings showing actual geomembrane placement and seams including the location of the anchor trench and all liner penetration boots.

#### 1.04 SEQUENCING AND SCHEDULING

- A. Roll delivery and installation shall be coordinated with the Work in other sections to prevent damage to the geomembrane.
- B. Installation of the geomembrane shall be coordinated with installation of any overlying geosynthetics and soils such that all geomembranes are fully covered and weighted down with gravel or soil **within 20 days of installation**.
- C. Installation of the geomembrane shall also be coordinated with all LFG Works being completed as part of this project.

## PART 2 PRODUCTS

### 2.01 DOUBLE SIDED TEXTURED WHITE 60MIL HDPE PROPERTIES

Section 31 32 20 HDPE Geomembrane

- A. The Geomembrane shall be manufactured from new first quality polyethylene resin. The product specified for this job shall be white, textured both sides, 60 mil HDPE Geomembrane product. Reclaimed polymer shall not be added to the resin except the polymer recycled during the manufacturing process. Recycled polymer shall not exceed 2 percent by weight. The sheet Geomembrane shall demonstrate the typical properties shown on the manufacturer's specification sheet.
- B. The product shall be capable of withstanding the deleterious effects of exposure to leachate, water, freeze-thaw, and handling. The HDPE shall be a flexible, durable, and watertight product, uniform in colour, thickness and size. The surface quality shall be textured on both the top and bottom surfaces with average asperity exceeding 10 mil, or more as required to achieve required shear strength. The material shall be white in colour.
- C. The manufacturer of the Geomembrane sheet shall be approved by the Engineer and have satisfactory experience in extruding polyethylene materials and a reputation for producing a high-quality product. The manufacturer shall provide a 5-year product warranty.
- D. To achieve performance requirements, the HDPE Geomembrane shall meet or exceed the Specifications listed below.

| Property                | Value Required         | Test Method       | Standard |
|-------------------------|------------------------|-------------------|----------|
| Thickness               | 1.5 mm (60 mils)       | ASTM D5199        | Minimum  |
| Density                 | 0.94 g/cm <sup>3</sup> | ASTM D1505/D792   | Minimum  |
| Yield Stress            | 22.1 kN/m              | ASTM D638 Type IV | Minimum  |
| Break Stress            | 39.9 kN/m              | ASTM D638 Type IV | Minimum  |
| Yield Elongation        | 12%                    | ASTM D638 Type IV | Minimum  |
| Break Elongation        | 700%                   | ASTM D638 Type IV | Minimum  |
| Puncture Resistance     | 480 kN                 | ASTM D4833        | Minimum  |
| Tear Resistance         | 187 kN                 | ASTM D1004        | Minimum  |
| Carbon Black Content    | 2 - 3%                 | ASTM D1603        | Minimum  |
| Carbon Black Dispersion | 1 or 2                 | ASTM D5596        | Minimum  |
| Stress Crack Resistance | 200                    | ASTM D5397        | Minimum  |

## 2.02 MEMBRANE FABRICATION

### A. Roll marking requirements:

1. Each sheet shall be marked with prominent, unique indelible identification conforming to approved Sheet layout.

---

Section 31 32 20 HDPE Geomembrane

---

2. Proper direction for unrolling shall be indicated to facilitate layout and positioning at Site.

#### 2.03 PRE-MANUFACTURED HDPE MEMBRANE BOOTS

- A. Pre-manufactured HDPE membrane boots shall be made of the same material as the geomembrane sheets in order to fit around penetrations. For example, pre-manufactured boots shall fit around manhole without folds, stretching or splicing.
- B. Flanges shall be constructed as per the drawings and with the following dimensions:
  1. The angle of flange shall match the angle of slope or bottom where pipe enters liner.
  2. The minimum width of flange shall be 1000 mm plus dimension of penetration.

#### 2.04 WELDING UNITS

- A. Double hot-wedge fusion seam welding shall be used for all HDPE field seams.
- B. Hot air welding will be accepted for patching Work.

#### 2.05 TENSIONMETER FOR FIELD TESTING

- A. The Contractor shall provide a portable tensiometer to test samples for peel adhesion and shear strength.
- B. The tensiometer shall have a minimum pull length of 610 mm (24 inches).
- C. The tensiometer shall be motor driven with jaws capable of travelling at a measured rate of 50 mm per minute.
- D. The tensiometer shall be equipped with a gauge which measures force exerted between jaws.

#### 2.06 SAND BAGS

- A. Use sandbags continuously along edges of Geomembrane and as required during installation to reduce wind flow under sheets, meeting the following Specifications:
  1. Bag Fabric: Sufficiently close knit to preclude fines from working through bags.
  2. Bags: Contain not less than 40 nor more than 60 pounds of sand having 100 percent passing No. 8 screen and shall be securely closed after filling to prevent sand loss.

#### 2.07 GEOMEMBRANE BOOT

- A. Geomembrane Boot to be constructed in accordance with the contract documents.
- B. Gasket to be chemical resistant commercial grade Neoprene or equivalent, as accepted by the Engineer.

---

Section 31 32 20 HDPE Geomembrane

---

- C. Sikaflex 1A or equivalent caulking to be weather resistant, non-sagging, industrial grade, poly-urethane, elastomeric sealant.

### PART 3 EXECUTION

#### 3.01 GENERAL

- A. This subsection documents the general Specifications for furnishing and installing the geomembrane.

#### 3.02 MEETINGS

- A. The Contractor and the Engineer shall meet at least once prior to commencing each of the following activities:
  - 1. Submission of Submittals
  - 2. Installation of geomembrane.
- B. Other meetings shall be organized as needed to maintain communication and progress.
- C. The meetings shall be attended by the Contractor's designated quality control representative, the Engineer, the Owner, representatives of the geomembrane installer, and others requested by the Engineer.
- D. The focus of the meetings shall be:
  - 1. To review Specifications and Drawings, Submittal requirements and procedures, schedule for beginning and completing geomembrane installation, training for installation personnel, and installation crew size.
  - 2. To establish a geomembrane marking system that includes sheet identification, defect identification and satisfactory repair confirmation. The established procedure is to be used throughout the project.
  - 3. Other issues as needed to maintain communication and progress.

#### 3.03 ENVIRONMENTAL REQUIREMENTS

- A. Membrane shall not be installed and seaming shall not be performed when:
  - 1. Air temperature is less than 2°C and decreasing or more than 32°C unless the installer is able to demonstrate that the seam strength requirements can be achieved
  - 2. Relative humidity is more than 90 percent

Section 31 32 20

HDPE Geomembrane

---

3. The wind is excessive
4. Edges of Geomembrane cannot be kept clean and dry for seaming
- B. Granular materials shall not be placed on geotextile overlaying geomembrane when ambient temperature is less than 2°C or more than 40°C, unless otherwise approved by the Engineer.

#### 3.04 FIELD INSTALLATION PREPARATION

- A. Prior to the start of fabrication, the Contractor shall make necessary field measurements to confirm proper fit of the geomembrane.
- B. The Contractor shall not place the geomembrane until condition of the underlying geotextile is inspected and found acceptable to the Engineer.
- C. Before the installation begins, the Engineer shall inspect and certify all geomembrane materials are free from damage during transit. Materials that cannot be repaired, in the Engineer's judgment, shall be rejected and removed from the Site.
- D. Contractor's Certification: Prior to starting geomembrane installation and daily thereafter, the geomembrane contractor shall certify in duplicate that the surface(s) upon which geomembrane will be installed is acceptable, on a standard form that will be provided by the Engineer.

#### 3.05 PROTECTION DURING CONSTRUCTION

- A. Exposed geomembrane surfaces shall not be used as Work areas for preparing patches, storing tools and supplies, or other uses. Installers shall use a protective cover as a work surface whilst working on the Geomembrane, if necessary or required by the Engineer.
- B. Workers shall be instructed about requirements for protection of Geomembrane such as handling geomembrane material in high winds, handling of equipment, and walking on Geomembrane surfaces. Shoes of personnel walking on geomembrane shall be smooth bonded sole or be covered with a smooth over-boot. The Contractor shall prohibit smoking, eating, or drinking on the Geomembrane, placing heated equipment directly on geomembrane, or other activities that may damage geomembrane
- C. The Contractor shall not operate equipment without spark arresters in vicinity of Geomembrane material nor place generators or containers of flammable liquid on the Geomembrane
- D. The Geomembrane shall be protected from vehicle traffic and other hazards
- E. The Geomembrane shall be kept clean and free of debris during placement

---

Section 31 32 20 HDPE Geomembrane

---

- F. The Contractor shall weigh down the membrane, using sand bags, sufficiently to prevent uplift, displacement, and damage by wind. Any damaged areas shall be repaired at the Contractor's expense

### 3.06 GEOMEMBRANE INSTALLATION - DEPLOYMENT

- A. During unwrapping, the Contractor shall visually inspect and mark each imperfection for repair.
- B. Unless specified otherwise, each product required for completion of geomembrane installation shall be installed in strict accordance with geomembrane manufacturer's recommendations.
- C. Prevent wrinkles, folds, or other distress that can result in damage or prevent satisfactory alignment or seaming. Provide for factors such as expansion, contraction, overlap at seams, anchorage requirements, seaming progress, and drainage.
- D. The Contractor shall be responsible for ensuring that the geomembrane is rapidly covered and/or sufficiently weighted down with sand bags to ensure that it is not damaged by wind during installation. Immediately remove damaged or improperly sealed bags from area, and immediately clean up spills.
- E. Anchor perimeter of geomembrane as listed herein, or as otherwise approved by Engineer. Anchor and seal geomembrane to pipes, and other types of penetrations as shown on the Drawings.
- F. All installed sheets and seams shall be inspected and approved by the Engineer prior to placement of overlying layers.
- G. Place overlying layers immediately following completion of geomembrane installation and field testing as acceptable to Engineer.
- H. A Geomembrane installation crew of appropriate size shall remain on-Site or on-call during placement of overlying products to repair geomembrane if damaged.
- I. The finished surface shall be smooth and free of substantial wrinkles in excess of slack required to compensate for thermal contraction.

### 3.07 GEOMEMBRANE INSTALLATION – FIELD SEAMS

- A. During installation, the installer crew shall strictly follow the Contractor's health and safety protocols in the approved Health and Safety Plan. Air quality shall be assessed at all times to verify a safe working atmosphere in relation to methane and H<sub>2</sub>S.
- B. Edges of sheets to be seamed shall be adjusted and temporarily anchored to prevent wrinkling and shrinkage.
- C. Sheet contact surfaces shall be wiped clean to remove dirt, dust, moisture, and other foreign materials and contact surfaces shall be prepared in accordance with the hot-wedge fusion seaming method.

Section 31 32 20

HDPE Geomembrane

---

- D. Sheet edges shall be overlapped a minimum of 100 mm or as recommended by manufacturer
- E. Seams shall be extended through anchor trenches and Boots to sheet edges. Seam intersections involving more than three thicknesses of geomembrane material shall be avoided. One of the Sheets at such seam intersections shall be offset by at least 600 mm.
- F. Uneven Seams: Fishmouths, pleats, folds, and tucks in field seams shall be avoided. Each such defect shall be repaired by slitting out far enough from the seam to dissipate it. The slit shall then be patched in accordance with these Specifications.
- G. Completed Seams: Shall be sealed, smooth and watertight.
- H. Capping of Field Seams:
  - 1. Capping shall be conducted only to repair patches limited to 10 m in length.
  - 2. Where cap seam is not possible, a cover strip 150 mm wide (minimum) and of the same thickness as geomembrane shall be used (and from same roll, if available).
  - 3. The capping strip shall be positioned over the center of the field seam and the entire width shall be seamed in accordance with the seaming requirements.
- I. Accessories:
  - 1. Rags: Clean, white cotton rags shall be used for seaming procedures. When a rag shows discoloration from use, it shall be discarded and replaced with a fresh one.
  - 2. Scissors: Blades shall have rounded points.

### 3.08 QUALITY ASSURANCE/QUALITY CONTROL – FIELD SEAM SAMPLING

- A. The Contractor shall verify that seaming equipment and operators are performing adequately. Installers shall produce test seam samples at the beginning of each shift for each seaming crew. In addition, if seaming has been suspended for more than 3 hours, or if breakdown of seaming equipment occurs, installers shall produce test seam samples prior to resuming seaming.
- B. Sample Size: 300 mm wide plus seam width, and 760 mm long.
- C. Destructive Sampling of Trial Seam:
  - 1. The minimum frequency shall be one Sample per 150 m of field seam, and minimum one sample per seaming crew per 4-hour work period.

---

Section 31 32 20 HDPE Geomembrane

---

2. Samples shall be produced using the same materials, equipment, personnel, and procedures as field seams made at time of Work in progress and under same conditions.
- D. Destructive Sampling:
1. Destructive sampling shall be conducted daily unless a more frequent schedule is required.
  2. Samples shall be removed from field seams at locations selected by the Engineer. Field seams shall be repaired in accordance with repair procedures specified in these Specifications.
- E. Sample Identification:
1. Each sample shall be identified by sample number, date, sheet location and personnel making seam. The sample location and location of the field seam shall be marked and recorded at the time the sample is made.
  2. The location of the sample, or location of the field seam in progress at time the sample is made shall be recorded on the sheet layout drawing.
  3. At a minimum the sample record shall include:
    - a. Sheet numbers and date seamed.
    - b. Seaming equipment and operator identification.
    - c. Temperature and speed setting of equipment.
  4. The Contractor shall also identify the location of each repair, cap strip, penetration, Boot, and sample taken from the installed geomembrane for testing on the sheet layout drawing.
- 3.09 QUALITY ASSURANCE/QUALITY CONTROL – FIELD SEAM STRENGTH SAMPLE TESTING
- A. Seam testing shall include tensile and peel strength tests.
  - B. Testing shall conform to practices listed in ASTM D4437, unless otherwise specified.
  - C. Each sample shall be tested for seam peel and tensile strength.
  - D. Test samples shall be saved, including specimens tested, until notified by Engineer relative to their disposal.
  - E. Seam shear strength shall be equal to or exceed 90 percent of the parent material. Parent material shall be tested in accordance with ASTM D638.
  - F. Bonded Seam Peel Strength of the geomembrane seams shall be:

Section 31 32 20 HDPE Geomembrane

| Parameter       | Criteria  |
|-----------------|---|
| Weld separation | Less than 25%                                   |
| Peel Strength   | At least 60% of material minimum yield strength |

G. Bonded Seam Shear Strength of the geomembrane seams shall be:

| Parameter                        | Criteria                               |
|----------------------------------|--|
| Average Strength for 5 Specimens | 90% of material minimum yield strength |
| Individual specimen strength     | 75% of material minimum yield strength |
| Elongation at break              | 250% minimum                           |

H. Test Failure: Each sample tested shall be required to pass. If a sample fails, the entire field seam from which it was taken shall be considered a failure and shall be rejected due to nonconformance with specification requirements. The Contractor shall comply with the following corrective measures at their own expense:

1. For Destructive Sample of Trial Seam failure, the Contractor shall rerun the field weld test using pieces from the same sample. If that test passes, the seam test will be accepted. If second test fails, each field seam represented by the failed sample shall be capped. A new test sample shall be made during capping procedure and submitted for testing.
2. Destructive Sample Failure: The Contractor shall rerun the field weld test using a new Sample from the same seam. If that test passes, the first test will be accepted. If second test fails, either the field seam between any two previous passed seam test locations that include failed seam shall be capped or another Sample on each side of failed seam location (3,000 mm minimum) shall be taken, and both samples shall be tested. If both samples pass, the field seam shall be capped between two sample locations. If either fails, process of taking Samples shall be repeated until both passes. Each field seam shall be bounded by two passed test locations prior to acceptance.

I. Record of Data: The Contractor shall identify each test by date of sample, date of test, Sample location, GPS coordinate, name of individual who performed test, standard test method used, list of departures from standard test methods, at a minimum.

### 3.10 QUALITY ASSURANCE/QUALITY CONTROL – IN-PLACE OBSERVATIONS AND TESTING

- A. No liner installation Work on membrane coverage shall take place unless a certified QA/QC technician from SHA is on Site.
- B. The Contractor shall visually inspect geomembrane sheets, seams, anchors, seals, and repairs for defects as installation progresses and again on completion.

---

Section 31 32 20

HDPE Geomembrane

---

- C. Wherever possible, the Contractor shall test each seam and repair using an air channel pressure device for double wedge welded seams. The air channel of the seam shall be pressurized to between 160 and 200 kPa. A maximum of 50 m of seam shall be permitted for a single test. A pressurized gauge shall be used at each end of the channel. Maximum pressure drops at either end not to exceed 30 kPa over 5-minute period or seam will be rejected. Test results shall be confirmed and certified by a SHA QA/QC technician.
- D. All extrusion welds and single seam fusion welds shall be subjected to vacuum box testing ASTM D4437 (method 7.3). Once a tight seal is established, pressure shall be maintained at approximately 35 kPa for a minimum of 15 seconds to observe whether bubbling of the soapy solution occurs. The process shall be continued for entire seam length with a 75 mm overlap between successive test sections. Test results shall be confirmed and certified by a SHA QA/QC technician.
- E. Inaccessible seams that cannot be tested with other methods shall be inspected using a point stress test. The Contractor shall run a metal probe, such as dull-pointed ice pick, along entire length of each seam, including repairs, to check for continuity of seams and absence of leak paths. Test results shall be confirmed and certified by a SHA QA/QC technician.
- F. The Contractor shall be responsible for replacement or repairs of sheets, seams, anchors, and seals that have been rejected by the Engineer. The Contractor shall clearly mark defective and questionable areas, and repair them to Engineer's satisfaction.
- G. Each area showing damage due to scuffing, penetration by foreign objects, or distress from rough subsurface shall be replaced or covered with an additional layer of Geomembrane materials as described in subsection 02073.3.10 - Repairing Geomembrane.
- H. All testing shall be performed in the presence of the Engineer's designated QA/QC technician.

### 3.11 REPAIRING GEOMEMBRANE

- A. The Contractor shall repair damaged or rejected seams with pieces of flat and unwrinkled Geomembrane material free from defects and seams. Patches shall be tightly bonded on completion of repair.
- B. Patches shall be neat in appearance and of a size that is 150 mm larger in all directions than area(s) to be repaired. Corners of each patch shall be neatly rounded to a minimum 25 mm radius.
- C. All damaged or defective areas of the geomembranes and seams shall be promptly repaired at the Contractor's expense.

### 3.12 CLEANUP

Section 31 32 20 HDPE Geomembrane

- A. The installer shall clean up the Work area as Work proceeds. He shall take particular care to ensure that no trash, tools, and other unwanted materials are left on, or are trapped beneath, the geomembrane and that scraps of geomembrane material are removed from work area prior to completion of installation.

3.13 PLACING MATERIALS OVER GEOMEMBRANE

- A. Prior to placing material over Geomembrane, the Contractor shall notify the Engineer. Installed Geomembrane shall not be covered until after Engineer provides authorization to proceed.
- B. If tears, punctures, or other Geomembrane damage occurs during placement of overlying products, the Contractor shall remove overlying products as necessary to expose damaged Geomembrane, and repair damage as specified herein.
- C. A minimum lift thickness of 300 mm shall be maintained when spreading material above a Geomembrane, unless otherwise directed by the Engineer or specified in the Drawings.
- D. When spreading the first lift over the Geomembrane, a very low ground pressure bulldozer that exerts no more than 4 psi ground pressure shall be used. The machine must weigh less than 10,000 Kg (22,046 lbs.). The following table shall be a guideline for the Contractor.

| Minimum Lift Thickness |                                  |
|------------------------|----------------------------------|
| Backfill Thickness     | Placement Equipment              |
| No Backfill            | Foot Traffic or 4-Track ATV Only |
| 150 mm or less         | Hand Placement                   |
| 200 – 300 mm           | D3 –D4 LGP Cat                   |
| 300 mm                 | Bobcat (Skid-Steer)              |
| 300 mm                 | D4 – D6 Style Cat                |
| 600 mm                 | D7 – D9 Style Cat                |
| 900 mm                 | Loaded Scrapers, Motor Graders   |
| 900-1200 mm            | Loaded Tandem Axle Trucks        |

- E. All Geomembrane coverage shall be conducted under continuous inspection of a QA/QC inspector designated by the Engineer.

**\*\* END OF SECTION \*\***

---

## **Section 31 41 00 - Shoring**

---

### **PART 1 GENERAL**

#### **1.01 GENERAL**

- A. Sheeting, shoring, and bracing for trenches and other excavations to protect the work, existing property, utilities, pavement, etc., and to provide safe working conditions in the excavations.

#### **1.02 REFERENCES**

- A. Work Safe BC Occupational Health & Safety Regulation, Part 20 Construction Excavation and Demolition.

### **PART 2 PRODUCTS**

#### **2.01 MATERIALS**

- A. Wood Materials: Use wood sheeting, sheet piling, bracing and shoring which is in good serviceable condition and timbers of sound condition, free from large or loose knots and of proper dimension.
- B. Steel Materials: Steel sheet piling and bracing of equal strength or better may be substituted for wood.

### **PART 3 EXECUTION**

#### **3.01 EXAMINATION**

- A. Examine the Site to determine the conditions under which work will be performed.
- B. The Contractor shall formulate his own conclusions as to the extent of the existing subsurface conditions.
- C. The Contractor shall be responsible for all trench construction and maintenance, including the adequacy of trench sheets, shoring and bracing. Damages resulting from improper sheeting, shoring, or bracing or from failure to sheet, shore, or brace shall be the sole responsibility of the Contractor.
- D. The failure or refusal of the Engineer to suggest the use of bracing or sheeting, or a better quality, grade, or section, or larger sizes of steel or timber, or to suggest sheeting, bracing, struts, or shoring to be left in place, shall not in any way or to any extent relieve the Contractor of any responsibility concerning the condition of excavation or of any of his obligations under the Contract, nor impose any liability on the Owner or his agents; nor shall any delay, whether caused by any action or want of action on the part of the Contractor, or by any act of the Owner, or their agents, or employees, resulting in the keeping of any excavation open longer than would

---

Section 31 41 00      Shoring

---

otherwise have been necessary, relieve the Contractor from necessity of properly and adequately protecting the excavation from caving or slipping, nor from and of his obligations under the Contract relating to injury to persons or property, nor entitle him to any claims for extra compensation.

- E. The method of shoring shall be according to the Contractor's directions. The Contractor may elect to use a combination of shoring and overbreak, tunneling, boring, sliding trench shields or other methods of accomplishing the work, provided the method meets with the approval of all applicable local, provincial and federal safety codes.
- F. Using skilled labour, drive or set sheeting, sheet piling, braces or shores in place and arranged so that they may be withdrawn as the excavations are backfilled, without injury to pipes and structures, and without injury to or settlement of adjacent structures and pavements.
- G. That portion of cribbing or sheeting extending below the spring-line of rigid pipe or below the crown elevation of flexible pipe shall be left in place unless satisfactory means of reconsolidating bedding or side support disturbed by cribbing or sheeting removal can be demonstrated.
- H. The use of horizontal strutting below the barrel of pipe or the use of the pipe as support for trench bracing will not be permitted above the spring-line of rigid pipe or the crown elevation of the flexible pipe. The bedding or side support shall be carefully reconsolidated behind the movable box prior to placing backfill. The use of horizontal strutting below the barrel of pipe or the use of the pipe as support for trench bracing will not be permitted.

### 3.02 SPECIAL REQUIREMENTS FOR FLEXIBLE PIPE (HDPE)

- A. Shoring to be removed, or moveable trench shields or boxes, shall be located at least 2-1/2 diameters away from the pipe if the bottom of the shoring, shield or box extends below the top of flexible pipe, unless a satisfactory means of reconsolidating the bedding, or side support material disturbed by shoring removal, can be demonstrated.
- B. Damages resulting from improper shoring or failure to shore shall be the sole responsibility of the Contractor.

**\*\* END OF SECTION \***

---

## Section 33 12 13.13 - Valves

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. All labour, equipment and materials to supply, install and commission valves as shown on the Drawings.

#### 1.02 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Submit product data for valves and appurtenances complete with manufacturer's specifications including:
  - 1. Installation instructions,
  - 2. Manufacturer operations and maintenance manuals,
  - 3. Ten (10) years limited warranty for defects in material and workmanship. The warranty document shall be made in Owner's name and shall be underwritten by the manufacturer and local supplier. Include contact details for local supplier.

### PART 2 PRODUCTS

#### 2.01 RESILIENT WEDGE GATE VALVE

- A. Valves shall conform to the latest revision of AWWA Standard C515 covering resilient seated gate valves for water supply service and include:
  - 1. A ductile iron body, bonnet, and O-ring plate. The wedge shall be totally encapsulated with rubber.
  - 2. The sealing rubber shall be permanently bonded to the wedge per ASTM D429.
  - 3. Valve shall be supplied with O-ring seals at all pressure retaining joints. No flat gaskets shall be allowed.
  - 4. The valve shall be non-rising stem, opening by turning left, and provided with 2" square operating nut or a handwheel with the word "Open" and an arrow to indicate the direction to open.
  - 5. Stems shall be cast copper alloy (bronze) with integral collars in full compliance with AWWA

---

Section 33 12 13.13 Valves

---

6. Waterway shall be smooth, unobstructed and free of all pockets, cavities and depressions in the seat area and shall accept a full-size tapping cutter.
7. The body, bonnet and O-ring plate shall be fusion-bond epoxy coated, both interior and exterior on body and bonnet. Epoxy shall be applied in accordance with AWWA C550.
8. Each valve shall have maker's name, pressure rating, and year in which it was manufactured.

**PART 3 EXECUTION**

**3.01 INSTALLATION**

- A. Resilient-seated gate valves should be inspected by the Contractor at the time of receipt for damage in shipment. The initial inspection should verify compliance with specifications, direction of opening, size and shape of the operating nut, number of turns to open or close, and type of end connections. A visual inspection of the seating surfaces should be performed to detect any damage in shipment or scoring of the seating surfaces.
- B. The Contractor shall request inspection from Engineer prior to valve installation. Do not install valve until confirmed by Engineer. The Engineer should look for bent stems, cracked parts, loose bolts, missing parts and accessories, and any other evidence of mishandling during shipment. Each valve should be operated through one complete opening-and-closing cycle in the position in which it is to be installed.
- C. Unless otherwise specified by the manufacturer, the installation procedures shall include:
  1. All bolts should be checked for proper tightness and protected with a suitable paint or by a polyethylene wrapping.
  2. During installation there is the possibility of foreign materials inadvertently entering the valve. Foreign material can damage the internal working parts during operation of the gate valve. For this reason, gate valves should be installed in the closed position.
  3. Each valve should be placed on firm footing in the trench or firmly supported by appropriate valve supports to prevent settling and excessive strain on the connection to the pipe. Piping systems should be supported and aligned to avoid damage to the valve.
  4. Unless otherwise specified, a lightweight HDPE valve vault or manhole should be provided for each valve in a buried-service application. The valve box should be installed so as to not transmit shock loads or stress to the valve.

---

Section 33 12 13.13 Valves

---

5. Tighten the bolts and nuts in a crossover method to load the pipe and valve evenly and prevent stress on the joints.
6. Complete pipe pressure testing with the valve in place.

3.02 STORAGE AND HANDLING

- A. Handle, store and install in strict compliance with manufacturer's instructions and recommendations.
- B. Protect from damage due to weather, excessive temperatures and construction operations.

**\*\* END OF SECTION \*\***

---

## Section 33 20 83 - HDPE Pipes and Fittings

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Supply, installation and testing procedures for High Density Polyethylene Pipe (HDPE) and fittings for use as shown on the Drawings.
- B. The HDPE pipe and fittings for landfill gas conveyance, condensate drains, condensate/leachate discharge.

#### 1.02 STANDARDS

- A. ANSI B18.2.1 Square and hex bolts and screws - inch series.
- B. ANSI/ASME B18.2.2 Square and hex nuts (inch series).
- C. ASTM A 307 Specification for carbon steel bolts and studs, 60,000 psi tensile.
- D. ASTM F-402 Standard practice for safe handling of solvent cements primers, and cleaners used for joining thermoplastic pipe and fittings
- E. ASTM D-638 Test method for tensile properties of plastics
- F. ASTM D-695 Test method for compressive properties of plastics
- G. ASTM D-1248 Specification for polyethylene plastics molding and extrusion materials
- H. ASTM D-2412 Standard test method for external loading properties of plastic pipe by parallel plate loading.
- I. ASTM D-2513 Standard specification for thermoplastic gas pressure pipe, tubing, and fittings.
- J. ASTM D-2837 Method of obtaining hydrostatic design basis for thermoplastic pipe material
- K. ASTM D-3261 Standard specification for butt heat fusion polyethylene (PE) plastic fittings for polyethylene (PE) Plastic Pipe and Tubing
- L. ASTM D-3350 Standard specifications for polyethylene plastics pipe and fittings materials
- M. ASTM F-477 Elastomeric seals (Gaskets) for joining plastic pipe
- N. ASTM F-714 Polyethylene (PE) plastic pipe (SDR-PR) based on outside diameter
- O. ASTM F2737 Standard Specification for Corrugated High Density Polyethylene (HDPE) Water Quality Units

---

Section 33 20 83      HDPE Pipes and Fittings

---

- P. ASTM F2648 / F2648M      Standard Specification for 2 to 60 inch [50 to 1500 mm] Annular Corrugated Profile Wall Polyethylene (PE) Pipe and Fittings for Land Drainage Applications
- Q. ASTM F2306 / F2306M      Standard Specification for 12 to 60 in. [300 to 1500 mm] Annular Corrugated Profile-Wall Polyethylene (PE) Pipe and Fittings for Gravity-Flow Storm Sewer and Subsurface Drainage Applications
- R. ANSI/AWWA C110      Ductile-iron and gray-iron fittings, 2 inch through 48 inches, for water and other liquids
- S. ANSI/AWWA C111      Rubber-gasket joints for ductile-iron and gray-iron pressure pipe and fittings
- T. ANSI/AWWA C500      Gate valves for water and sewage systems
- U. ASTM F1417      Standard Practice for Installation Acceptance of Plastic Non-pressure Sewer Lines Using Low-Pressure Air
- V. ASTM F2164      Standard Practice for Field Leak Testing of Polyethylene (PE) Pressure Piping Systems Using Hydrostatic Pressure

### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance with Section 01 33 00 - Submittal Procedures.
- B. Submit manufacturer's product data including pipes, pipe accessories, valves, and appurtenances.
- C. The Contractor shall submit the following shop drawings:
  - 1. Manufacturer certified installation drawings for all valves
  - 2. Construction details of fabricated fittings
  - 3. Quality control test results for fabricated fittings
- D. Submit pipe manufacturer's qualifications
- E. Submit pipe fabricator's qualifications and certificates with applicable standards
- F. Submit pipe installer's qualifications.
- G. The contractor shall submit samples to the engineer of each type of molded, fabricated and flanged fitting, and each ball valve, to be used on this project.
- H. Provide maintenance data for incorporation into manual.
- I. As part of the tender, the Contractor shall provide proof of at least 10,000 m of HDPE pipe welding experience and at least 1,000 m of HDPE pipe welding experience of 450 mm diameter pipe or greater.

### 1.04 PAYMENT

Section 33 20 83 HDPE Pipes and Fittings

- A. Payment will be made in accordance with the related sections.

**PART 2 PRODUCTS**

**2.01 GENERAL HDPE PIPES AND FITTINGS**

- A. HDPE Pipe shall be made from polyethylene resin compound qualified as Type III, Category 5, Class C, Grade PE 4710 in ASTM D1248. The HDPE pipes and fittings shall conform to Cell Classification 345434C or 355434C (ASTM D 3350).
- B. Materials used for the manufacture of polyethylene pipes and fittings shall meet the following physical property requirements:

**HDPE Pipe Specifications**

| Property                    | Unit              | Test Procedure | Value                 |
|-----------------------------|-------------------|----------------|-----------------------|
| Density                     | g/cm <sup>3</sup> | ASTM D-1505    | 0.947-0.955           |
| Melt Index [E]              | g/10 min          | ASTM D-1238    | <0.15                 |
| Flexural Modulus            | psi               | ASTM D-790     | 110,000 to 160,000    |
| Tensile Strength            | psi               | ASTM D-638     | 3,000 to 3,500        |
| ESCR [C]                    | hours             | ASTM D-1693    | f <sub>0</sub> >5,000 |
| HDB (@23°C)                 | psi               | ASTM D-2837    | 1,600                 |
| UV Stabilizer [C]           | % Carbon Black    | ASTM D-1603    | 2 to 3                |
| Elastic Modulus             | psi               | ASTM D-638     | 110,000               |
| Brittleness Temperature     | F                 | ASTM D-746     | <-180                 |
| Vicat Softening Temperature | F                 | ASTM D-1525    | 259                   |
| Thermal Expansion           | in/in/F           | ASTM D-696     | 1x10E-4               |
| Hardness                    | Shore D           | ASTM D-2240    | 66                    |
| Molecular Weight Category   | --                | --             | Extra High            |

- C. Pipes shall be of the nominal diameter and DR shown on the Drawings. Pipe diameters shall conform to ASTM F714.
- D. For slotted and perforated pipes, slots and perforations shall be as shown on the Drawings.
- E. Ring Stiffness Constant (RSC) values for the pipe can be directly related to the pipe's class designation. (Nominal RSC of Class 40 pipe = 40, etc.). The minimum RSC is 90 percent of the nominal.
- F. The pipe shall contain no recycled compound except that generated in the manufacturer's own plant from resin of the same specifications from the same raw material supplier.

---

Section 33 20 83      HDPE Pipes and Fittings

---

- G. The polyethylene pipes shall be homogeneous throughout and free of visible cracks, holes, foreign inclusions, or their injurious defects. Any pipe with nicks, scrapes, or gouges deeper than 5 percent of the normal wall thickness shall be rejected. The pipes shall be uniform in color, opacity, density, and other physical properties.
- H. The following information shall be continuously marked on the pipes and spaced at intervals not exceeding 1500 mm (5 feet):
  - 1. Name and/or trademark of the pipe manufacturer.
  - 2. Nominal pipe size.
  - 3. Standard Dimensional Ratio (SDR).
  - 4. PE 4710.
  - 5. Manufacturing Standard Reference.
  - 6. A production code form which the date and place of manufacture can be determined.
- I. Perforated and/or slotted pipes should be free of any shavings.
- J. Fittings shall be manufactured in accordance with ASTM D3261, except as modified herein.
- K. Backing rings shall be convoluted back-up rings rated at 150 pounds conforming to vital dimensions of ANSI B 16.5 and shall be made of stainless steel or ductile iron conforming to ASTM 536-80, Grade range from 60/40/18 to 65/45/12. Ductile iron backup rings shall be hot-dipped galvanized or epoxy coated.
- L. Bolts and nuts Shall conform to ASTM A 307, Grade B, ANSI B18.2.1, ANSI/ASME B18.2.2: stud bolts, carbon steel, semi-finished with heavy hex nuts, complete with washers.
- M. Flexible O-Rings for settlement sleeves as shown on the Drawings, conforming to ASTM D 5926, C 1173 and CSA B 602

## 2.02 CORRUGATED HDPE DOUBLE WALL PIPE AND FITTINGS

- A. Refers to double wall HDPE corrugated pipe, N-12 ST IB for use in gravity-flow land drainage applications with 100 through 1500 mm (4- through 60-inch) diameter pipe.
- B. Material for pipe production shall be an engineered compound of virgin and recycled high density polyethylene conforming with the minimum requirements of cell classification 424420C (ESCR Test Condition B) for 4- through 10-inch (100 to 250 mm) diameters, and 435420C (ESCR Test Condition B) for 12- through 60-inch (300 to 1500 mm) diameters, as defined and described in the latest version of ASTM D3350, except that carbon black content should not exceed 4%.

Section 33 20 83 HDPE Pipes and Fittings

- C. Fittings shall conform to ASTM F 2306. Bell and spigot connections shall utilize a spun-on or welded bell and valley or saddle gasket meeting the soil-tight joint performance requirements of ASTM F 2306.

## 2.03 TEST METHODS

- A. Flattening: Three specimens of each of the three pipes products (a minimum of 30 cm long) shall be flattened between parallel plates in a suitable press until the distance between the plates is 40 percent of the outside diameter of the pipe. The rate of loading shall be uniform and such that the compression is completed within 2 to 5 minutes. Remove the load, and examine the specimens for splitting cracking or breaking. Results shall be reported to Engineer.
- B. Pipe Ring Stiffness Constant: The pipe ring stiffness constant shall be determined utilizing procedures similar to those outlined in ASTM D-2412. The stiffness of HDPE pipe is defined in terms of the load, applied between parallel plates, which causes 1 percent reduction of pipe diameter. Test specimens shall be a minimum of two pipe diameter or 1 m in length, whichever is less. Results shall be compared to Specifications and reported to Engineer.

## PART 3 Execution

### 3.01 QUALITY ASSURANCE

- A. The pipe and fittings manufacturer shall have an established quality assurance program responsible for inspecting incoming and outgoing materials. At a minimum, incoming polyethylene materials shall be inspected for density per ASTM D 1505, melt flow rate per ASTM D 1238, and contamination. All incoming polyethylene materials shall be certified by the supplier. Certification shall be verified by Quality Assurance. Incoming materials shall be approved by Quality Assurance before processing into finished goods.
- B. The pipe and fittings manufacturer shall have an established quality assurance program responsible for assuring the long-term performance of materials and products. Representative samples of polyethylene materials shall be tested against the physical property requirements of this specification. Each extrusion line and molding machine shall be qualified to produce pressure rated products by taking representative production samples and performing sustained pressure tests in accordance with ASTM D-1598.
- C. Quality assurance test for representative pipe and fitting samples shall include:

| Test                      | Standard    | Pipe         | Fittings       |
|---------------------------|-------------|--------------|----------------|
| Ring ESCR                 | ASTM F-1248 | Yes          | Not Applicable |
| Sustained pressure at     | ASTM D-1598 | Yes          | Yes            |
| 176 F/725 psi hoop stress |             | (fo> 1 00 h) | (fo>1 00 h)    |

Section 33 20 83 HDPE Pipes and Fittings

|                           |             |              |              |
|---------------------------|-------------|--------------|--------------|
| Sustained pressure at     | ASTM D-1598 | Yes          | Yes          |
| 73°F/1600 psi hoop stress |             | (fo> 1 000h) | (fo> 1 000h) |

- D. All outgoing materials shall be inspected for diameter, wall thickness, length, straightness, out-of-roundness, concentricity, toe-in, inside and outside surface finish, markings, and end cut. Quality Control shall perform tests of density, melt flow rate, carbon content, and carbon dispersion. In addition, samples of the pipe provided shall be tested for hoop tensile strength and ductility by either quick burst per ASTM D-1599 or ring tensile per ASTM D-2290. Molded fittings shall be subject to x-ray inspection for voids, and tests for knit line strength. All fabricated fittings shall be inspected for fusion quality and alignment.
- E. The pipe and fitting manufacturer shall maintain permanent QC and QA records.

### 3.02 HANDLING

- A. All outgoing materials shall be inspected for diameter, wall thickness, length, straightness, out-of-roundness, concentricity, toe-in, inside and outside surface finish, markings, and end cut. Quality Control shall perform tests of density, melt flow rate, carbon content, and carbon dispersion. In addition, samples of the pipe provided shall be tested for hoop tensile strength and ductility by either quick burst per ASTM D1599 or ring tensile per ASTM D2290. Molded fittings shall be subject to x-ray inspection for voids, and tests for knit line strength. All fabricated fittings shall be inspected for fusion quality and alignment.
- B. The pipe and fitting manufacturer shall maintain permanent QC and QA records.

### 3.03 PREPARATION

- A. Trenching and backfilling shall be done in accordance with Section 31 23 01.
- B. Verify that the excavated trench surfaces are ready to receive work, and dimensions, alignment, grade and elevations are as shown on the Drawings.
- C. Hand trim excavations to required excavations.
- D. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- E. Embedment material shall be processed and placed as specified in the Drawings for each pipe system.
- F. Verify bedding is to lines and grades shown on Drawings.

### 3.04 JOINING

- A. Heat Fusion of Pipe
1. Weld in accordance with manufacturer's recommendation for butt fusion methods. Provide fusion operators certified by the pipe manufacturer.

---

Section 33 20 83      HDPE Pipes and Fittings

---

2. Butt fusion equipment for joining procedures shall be capable of meeting conditions recommended by pipe manufacturer including, but not limited to, temperature requirements, alignment, and fusion pressures.
  3. For cleaning pipe ends, solutions such as detergents and solvents, when required, shall be used in accordance with manufacturer's recommendations.
  4. Do not bend pipe to greater degree than minimum radius recommended by manufacturer for type and grade.
  5. Do not subject pipe to strains that will overstress or buckle pipe or impose excessive stress on joints.
  6. Branch saddle fusions shall be joined in accordance with manufacturers recommendations and procedures. Branch saddle fusion equipment shall be of size to facilitate saddle fusion within trench.
  7. Before butt fusing pipe, inspect each length for presence of dirt, sand, mud, shavings, and other debris or animals. Remove debris from pipe.
  8. Cover at end of each working day open ends of fused pipe. Cap to prevent entry by animals or debris.
  9. Use compatible fusion techniques when polyethylene pipe of different melt indexes is fused together. Refer to manufacturer's specifications for compatible fusion.
- B. Flange Jointing
1. Use on flanged pipe connection sections.
  2. Connect backing rings with bolts and nuts to complete with washers.
  3. Butt fuse fabricated flange adapters to pipe.
  4. Observe following precautions in connection of flange joints.
    - a. Align flanges or flange/valve connections to provide tight seal. Require nitrile-butadiene gaskets if needed to achieve seal. Gaskets are required for flange/valve connections.
    - b. Place U.S. Standard round washers as may be required on some flanges in accordance with manufacturers recommendations. Bolts shall be lubricated in accordance with manufacturers recommendations.
    - c. Tighten flange bolts in sequence and accordance with manufacturers recommendations. CAUTION: Do not over-torque bolts.

---

Section 33 20 83      HDPE Pipes and Fittings

---

5. Pull bolt down by degrees to uniform torque in accordance with manufacturers recommendation.
  6. Protect below grade bolts and flanges by covering with a 5mil polyethylene wrap. Duct tape wrap to HDPE pipe.
  7. Electrofusion couplers, where -used, installed per manufacturers specifications.
- C. Corrugated Pipe Jointing
1. Pipe shall be joined using a bell & spigot joint meeting ASTM F2648. The joint shall be soil-tight c/w gaskets
  2. Gaskets shall be installed by the pipe manufacturer and covered with a removable wrap to ensure the gasket is free from debris.
  3. A joint lubricant supplied by the manufacturer shall be used on the gasket and bell during assembly.

### 3.05 INSTALLATION

- A. Prevent debris from entering inside pipe.
- B. Install only that amount of pipe which can be backfilled in same day.
- C. Remove standing water in trench before installation.
- D. Do not bend in a radius smaller than recommended by manufacturer when staged on Site or installed in the trench.
- E. Perform thermal fusion in an area near the installation location to avoid excessive transportation and possible damage to the pipe.
- F. Prior to initiating thermal fusion in the field on any pipe on any given day, provide a test weld and operating data to Engineer including welding temperature, machine number, date of last service, and clearance certificate.
- G. Install pipe, fittings and accessories in accordance with ASTM D2321, the Drawings, and manufacturers' instructions. Place pipe on prepared bedding layer.
- H. Pipe shall be free from burrs, nicks, gouges, surface cracks or defects. Pipe shall be open, clean, and free draining.
- I. Lay pipes to grades shown on the Drawings, with maximum variation from true grade of 5 mm in 3 metres. Maintain positive drainage for condensate on all pipe sections.
- J. Leave all joints in pipe systems uncovered until system is inspected and approved by Engineer.
- K. Wherever possible, leave all joints in pipe systems uncovered until all tests are completed.

---

Section 33 20 83      HDPE Pipes and Fittings

---

- L. Corrugated Pipe installation shall be in accordance with ASTM D2321 and manufacture recommended installation guidelines.
  - 1. Unless otherwise specified, the minimum cover in trafficked areas for 100 through 1200 mm (4 to 48-inch) diameters shall be 300mm
  - 2. Backfill for minimum cover situations shall consist of Class 1 (compacted), or Class 2 (minimum 95% MMPD) material.
  - 3. Maximum fill heights depend on embedment material and compaction level and shall be confirmed with Engineer.

### 3.06 QUALITY CONTROL

- A. Quality control shall be performed in accordance with Section 01 45 00.
- B. The Contractor shall provide grade and alignment control during pipe laying. The Contractor shall provide stakes or similar devices that display relevant information to control Work. Grade control devices shall be spaced no greater than 20 metres (50 feet) apart over the entire length of pipe and at critical grade breaks or changes in alignment.
- C. Provide grade control device showing top of bedding layer design elevation, invert elevation and top of pipe elevation and existing grade elevation. The Contractor shall monitor placement of pipe to verify grade and alignment tolerance are met.
- D. The Contractor shall immediately set new grade markers which have been disturbed.
- E. The Contractor shall measure and record the final as-built pipe information. As-built survey information shall include horizontal and vertical locations of pipe every 20 metres (50 feet) on center and at grade breaks, junctions, or changes in alignment. Horizontal and vertical locations shall be referenced to project datum. Vertical locations for pipe shall include top of pipe and invert elevations. Measurements shall be accurate to 1/100 of a metre.

### 3.07 CLEANING

- A. Pipe systems shall be cleaned and tested in accordance with the manufacturer's recommendation and as specified herein.
- B. Prior to testing, lines shall be cleaned to remove shavings, welding slag, dirt, construction debris, and other foreign material and flushed with clean water at a minimum of 1m/sec (3 fps) velocity.

### 3.08 TESTING

- A. Before any section of non-perforated pipe is put into service, it shall be carefully tested to assure it is leak proof. Perforated pipe will not have to be tested.

---

Section 33 20 83      HDPE Pipes and Fittings

---

- B. Notify Engineer at least 24 hours in advance of all proposed tests. Perform tests in the presence of the Engineer.
- C. All testing of pipe systems shall be done with due regard for the safety of employees and the public during testing. Bulkheads, anchorage and bracing suitably designed to resist test pressures shall be installed if necessary.
- D. The pressure tests shall be conducted as per the Plastic Pipe Institute - Guidance for Field Hydrostatic Testing Of High Density Polyethylene Pressure Pipelines TN-46/2013a:
  - 1. Isolate the line to be tested by closing the appropriate valves and ensuring that all endcaps/flanges are in place and secure. Temporarily install caps or flanges where needed.
  - 2. Apply pressure to the pipe at the rated design pressure for the pipe. For force-mains only, apply 1.5 times the maximum rated pressure for the pipe.
  - 3. Bleed off any trapped air
  - 4. The test procedures consist of two steps; the initial expansion and the test phase. During the initial expansion of the pipe under test, sufficient make-up water must be added to the system at hourly intervals for 3 hours to maintain the test pressure. After 4 hours, the initial expansion should be complete and the actual test can star. The system must maintain the pressure after accounting for temperature variation for a period of MINIMUM 3 HOURS.
  - 5. Joints and fittings shall be inspected using soap and water, or an equivalent nonflammable solution
- E. If the Engineer does not accept the system test results, then the Contractor is responsible for diagnosing the system faults and making appropriate repairs at the Contractor's expense. Repairs would include:
  - 1. Removing any joints showing leakage form the pipe, and rejoining
  - 2. Locate and repair defects in pipe if additional leakage occurs
  - 3. Once the repairs are completed, the testing shall be repeated
- F. The Contractor is responsible for the cost and supply of all equipment and manpower to successfully carry out the test to the satisfaction of the Engineer

**\*\* END OF SECTION \*\***

---

## Section 33 20 85 - Pipe Casing

---

### PART 1 GENERAL

#### 1.01 SECTION INCLUDES

- A. Pipe casings to be used for road crossings and/or ditch crossings.

#### 1.02 REFERENCES

- A. Handbook of Steel Construction, as issued by the CISC.
- B. Detailing for Steel Construction, Second Edition, as issued by the AISC.
- C. Structural Welding Code as issued by the CWS.
- D. Metal Framing Manufacturers Association Standard Publication MFMA-1.

#### 1.03 SUBMITTALS

- A. Submittals shall be made in accordance Section 01 33 00 - Submittal Procedures.
- B. Provide product details, including accessories, fittings, spacers and hardware including:
  - 1. Name, address and contact information of manufacturer and distributor (if different)
  - 2. Product type including technical specifications and grade
  - 3. Lot number
- C. Provide manufacturer's installation details and instructions.

#### 1.04 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing and installation of the products specified in this section.

#### 1.05 FIELD MEASUREMENTS

- A. Verify that field measurements are as indicated.

### PART 2 Products

#### 2.01 DUCTILE IRON PIPE

- A. The casing pipes shall be made of ductile iron, class 52 or above.
- B. The casing pipes shall have restrained joints such as “flex-ring”, “fast-grip”, “lok-ring”, or “MJ coupled” style joints.

---

Section 33 20 85      Pipe Casing

---

- C. The pressure class of the pipe shall be 350 psi or above.

## 2.02 CARBON STEEL PIPE

- A. The casing pipes shall be made of carbon steel per ASTM A53, schedule 40 or above.

## 2.03 PREPARATION FOR INSTALLATION

- A. Verify that the excavated trench surfaces are ready to receive Work, and dimensions, alignment, grade and elevations are as shown on the Drawings.
- B. Hand trim excavations to required excavations.
- C. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- D. Embedment material shall be processed and placed as specified in the Drawings.
- E. Verify bedding is to lines and grades shown on the Drawings.

## 2.04 ASSEMBLY INSTRUCTION

- A. Thoroughly clean and remove any foreign material or excess paint. Remove any sharp edges with a standard file.
- B. For steel casings: Welding shall be done by operators who have been qualified by tests as prescribed by the Canadian Welding Bureau (CWB) in Standard Chylification Procedure to perform the type of Work required. The quality of welding shall conform to CWB Structural Welding Code.
- C. For ductile iron casings: If gasket is used, insert the gasket into the recess in the bell with small end of the gasket facing the bell face. Apply lubricant to the inside surface of the gasket, making sure that entire surface is coated.
- D. Guide the plain end into the bell end, while maintain straight alignment, push the plain end into the bell socket. Once the joint is assembled, necessary deflection can be accomplished.
- E. Use mechanical joints for all sections. The type of joint could include but is not limited to flanged joints, restrained joints, push-on restrained joints restrained push-on gasket or equivalent. Lubrication of the plain end, socket, and gasket during assembly of mechanical joint ductile iron pipe is recommended in ANSI/AWWA C111/A21.11, ANSI/AWWA C600, and manufacturers' literature.

**\*\* END OF SECTION \*\***

---

## **Section 33 61 00 – Liner Penetration Boot**

---

### **PART 1 GENERAL**

#### **1.01 SECTION INCLUDES**

- A. Equipment, tools, materials, and labor needed to install liner penetration boot and trench seals as specified herein and as indicated on the Drawings.

#### **1.02 REFERENCES**

- A. National Sanitation Foundation Standard 54.

#### **1.03 SUBMITTALS**

- A. Submit under provisions of Section 01 33 00 – Submittal Procedures.
- B. Product Data: Submit manufacturer's technical literature for all Products specified including minimum/maximum physical properties.
- C. Submit manufacturer's minimum/maximum physical properties of Geosynthetics.
- D. Shop Drawings: Submit shop drawings of all shop fabricated fittings.
- E. Submit manufacturer's instructions for storage, handling, installation, and seaming/joining which are in compliance with this specification and conditions of warranty.
- F. Submit qualifications of installers as specified below with a list of representative projects with project and Owner's names and phone numbers of Owner's project representative.
- G. Quality Assurance/Control Submittals:
  - 1. Submit Installer's Quality Control Manual.
  - 2. Submit certificates of compliance and test results on materials furnished including manufacturer's quality control test results.
  - 3. Contractor shall submit quality control documentation prepared by the Contractor during installation as specified hereinafter.

#### **1.04 DELIVERY, STORAGE AND HANDLING**

- A. Inspect materials delivered to the Site for damage. Comply with Manufacturer's instructions for storage and handling. Unload and store with minimum of handling. Store materials on-Site in enclosures or under protective coverings. Store plastic piping and fittings in a flat, horizontal position, and under cover, out of direct sunlight. Do not sort materials directly on the ground. Keep free of dirt and debris.

---

Section 33 61 00      Liner Penetration Boot

---

- B. Handle fittings, Geomembrane and other accessories in a manner that ensures delivery to the point of installation in sound, undamaged condition. Carry, do not drag, Geomembrane to the point of installation.

#### 1.05 SITE CONDITIONS

- A. Installation will occur directly over refuse at gas extraction wells. Some installations will occur in excavated pits. All areas overlie refuse. The refuse is classified as municipal solid waste under provincial regulations. The character and extent of refuse is unknown. The Contractor is cautioned of the possibility of encountering potentially harmful gases, liquids or wastes. Work near refuse may encounter harmful gases, liquids and soil, even if refuse is not found. The Contractor shall comply with all health and safety provisions of Section 00 73 19 of these Specifications.

### PART 2 PRODUCTS

#### 2.01 GEOMEMBRANE

- A. Geomembrane shall be made of high-density polyethylene (HDPE), low liner polyethylene (LLDP)E), polyvinyl chloride (PVC) or polypropylene (PP) with a thickness as shown on the Drawings.

#### 2.02 GEOTEXTILE

- A. The Geotextile shall be a non-woven fabric made of polyester or polypropylene of thickness and density shown on the Drawings

### PART 3 EXECUTION

#### 3.01 GEOMEMBRANE

- A. Verify the subgrade meets requirements for density, grade/elevation, surface appearance and has been tested, surveyed, inspected, and accepted for placement of overlying materials. Do not begin without verifying with Engineer
- B. Request presence of Engineer during placement of material and testing of seams. Do not place without giving the Engineer opportunity for inspection
- C. Prepare surface to receive Geomembrane by removing all objects which may damage Geomembrane. Hand rake and grade smooth
- D. Prepare existing Geomembrane for connection to new geomembrane and pipe sleeve by removing all objects which may damage the Geomembrane. Hand brush the existing Geomembrane
- E. Install Geomembrane in accordance with manufacturer's recommendations
- F. The Geomembrane shall be seamed in strict accordance with EPA Technical Guidance Document, EPA/530/SW-91/051, "Inspection Techniques for Fabrication of Geomembrane Seams". All seams shall be air tight and tested for air leaks, continuity and strength. Trial seams and leak testing shall be done in accordance with

---

Section 33 61 00      Liner Penetration Boot

---

EPA Technical Guidance Document EPA/600/R-EPA/600/R-93/182, "Quality Assurance and Quality Control for Waste Containment Facilities".

3.02 ACCEPTANCE

- A. The Contract shall retain ownership and responsibility for the cover penetration seal and geosynthetics until acceptance by the Engineer. The cover penetration seal shall be accepted by the Engineer when:
1. Conformance test results meet the requirements of the Contract Documents
  2. Required documentation from the manufacturer, fabricator and installer has been received and accepted
  3. The installation is complete and accepted
  4. Verification of the adequacy of all field seams and repairs, including associated testing, is complete
  5. Written certification documents, including as-built drawings, have been received by the Engineer

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.01 – Crushing Blast Rock Aggregate**

---

### **PART 1 GENERAL**

#### **1.01 MATERIAL SOURCE**

- A. For the production of crushed granular material, the Contractor shall provide hauling and crushing equipment or such means that all blasted rock designated for crushing will pass through the crusher screens.
- B. The Contractor shall examine the site prior to tendering to determine equipment and means required to crush the existing Blast rock to the Aggregate sizes specified.
- C. Oversize rock excavated from blast rock source not capable of being crushed shall be mechanically reduced and crushed. Costs will be incidental to the contract price.

### **PART 2 PRODUCTS**

Not used

### **PART 3 EXECUTION**

#### **3.01 PIT CLEAN UP**

- A. When the work of any excavation in any pit is finally discontinued, the Contractor shall dress the sides of the excavation, normally to a 1 ½ to 1 slope, or such other slope as the Consultant may direct and, where necessary, open up such drains or ditches as may be required to prevent water standing therein. The Contractor shall trim off and dress all slopes of material piles and leave the site in a neat, trim, and tidy condition to the satisfaction of the Engineer.
- B. The trimming, sloping, dressing, and drainage ditching of the pit and the maintenance of the access roads will be considered as work incidental to the supply of aggregates.

#### **3.02 HANDLING**

- A. Handle and transport material to avoid segregation, contamination and degradation.

#### **3.03 EQUIPMENT AND PLANT**

- A. The Contractor under this Contract shall provide and maintain in good operating condition, all plant, plant equipment, tools and transport necessary to comply with the requirements of these Specifications, such as excavating and loading equipment, grizzlies, feeders, crushers, screening equipment, loading bins, weigh scales, transport, spreading, grading and compaction equipment or any other plant, equipment, tools or materials that may be required for the full completion of the Work intended under this Specification. Such plant, tools, transport and equipment

---

Section 31 05 16.01    Crushing Blast Rock Aggregate

---

shall be of a type and capacity to ensure proper construction and maintenance of access roads, development of the pit, maximum use of the pit, production of granular aggregates to the standard of uniformity required and adherence to the construction schedule.

### 3.04 WORKING OF PIT

- A. The pit shall be worked in such a manner as to provide a consistent feed of the granular blasted rock to the crushers, screening plant or loaders, as may be applicable. Before commencing production, the Contractor shall discuss and obtain approval for his proposed methods of production from the Engineer.

### 3.05 CRUSHING OPERATIONS

- A. The Contractor shall adjust his crushers and/or screening plants and provide such screens as may be necessary to produce and maintain acceptable gradations of granular aggregates. The Engineer will arrange for regular sieve analyses to be made of granular aggregates during production. The Contractor will be advised if sieve analysis results show gradations non-conforming to specifications. If the Contractor fails to remedy the defects as soon as reasonably possible, crushing and/or screening shall cease at the end of the shift and will not recommence until the crusher has been repaired or readjusted to produce the required gradation of aggregates.

### 3.06 STOCKPILING

- A. All crushed granular aggregates shall be stockpiled.
- B. Stockpile sites shall be as designated on the Drawings i.e., working area in the future Cell 4 and Cell 5A areas to stockpile crushed aggregate. Prior to any deviation to the designated stockpile location indicated on the Contract drawings, the Contractor shall discuss and obtain approvals from the Engineer.
- C. Stockpiles shall be constructed on the previously prepared site in accordance with cross section stakes set by the Engineer, and when completed shall be neat and regular in shape, occupying as small an area as practicable. The stockpile shall be readily accessible for loading without obstructing the highway or haul road. Stockpiles shall be built up in layers not to exceed 1 metre in thickness and shall have a minimum height of 3 metres.
- D. Planked or protected runways shall be provided for operating trucks on stockpiles when the Engineer deems them necessary to prevent dirt being tracked onto the crushed granular aggregates.
- E. The Engineer may, on receipt of a written request from the Contractor, permit the Contractor to build the final stockpile by bulldozing the aggregates from a feed pile at the end of a production belt provided that:
  - 1. The bulldozer(s) to be used shall be equipped with U shaped pushing blades;

---

Section 31 05 16.01    Crushing Blast Rock Aggregate

---

2. The aggregates do not become contaminated with oversize material, mud or other objectionable material picked up from the pit floor or general working areas.
  3. The crushed granular aggregates are distributed evenly over the final stockpile area in lifts not greater than 300 mm in depth.
  4. The cone of the feeder pile at the end of the production belt shall not, without express permission, be allowed to build up to a greater height than 3 metres; and
  5. No appreciable segregation shall occur in the main stockpile as a result of using this method of stockpiling.
- F. The Engineer, by granting the Contractor permission to stockpile by bulldozing, shall not in any way be considered to have relieved the Contractor of responsibility for constructing a satisfactory, uniform, clean stockpile. The Consultant may, at any time that he becomes dissatisfied with the quality of stockpiling which may result from this method of construction, cease construction of the stockpile by means of a belt feed and bulldozer, and require the Contractor to construct the pile in an alternate manner.

3.07 CLEANING

- A. Leave material stockpile site in tidy, well drained condition, free of standing surface water.
- B. Leave any unused material in neat compact stockpiles as directed by Engineer.

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.02 – Blasting**

---

### **PART 1 GENERAL**

#### **1.01 LOCATION**

- A. The quarry area involved in this Contract is located at the Hartland landfill as shown on the Drawings.

#### **1.02 SCOPE OF WORK**

- A. The purpose of the quarrying is to produce a blasted rock which will provide efficient production of crushed and screened construction aggregates to the gradational specifications.

#### **1.03 SITE PREPARATION**

- A. The Contractor shall be responsible for the removal and on-site disposal of all overburden to the satisfaction of the Engineer. Disposal sites shall be authorized by the Engineer. The Contractor is also responsible for site access for drilling and other equipment.

#### **1.04 EXPLOSIVES**

- A. The method of storage, handling, use and character of all explosives shall be subject to the Accident Prevention Regulations covering explosives, pursuant to the Workers' Compensation Act of British Columbia and must conform to local police requirements.
- B. Explosives in excess of 68 kilograms shall be kept only in registered premises, which have been licensed under the Explosives Act (Canada).

#### **1.05 BLASTING**

- A. General
  - 1. The method and procedure employed for blasting shall be in accordance with provincial and municipal ordinances. The Contractor shall not do any blasting without first verifying that his insurance covers any loss of life or damage that may result from this work. It is the Contractor's responsibility to drill and blast in the designated blasting area as shown on the Drawings, in order to produce shotrock to be used for the crushing operation. Drilling and blasting shall be done to the elevations and configurations as shown on the Drawings.
  - 2. The Owner does not in any way assume responsibility for injury, loss of life, or damage that may result from blasting, the sole responsibility therefore being that of the Contractor. Damage caused by blasting, including to adjacent roads,

---

Section 31 05 16.02     Blasting

---

utilities or other landfill facilities, shall be repaired by the Contractor at his expense.

3. Owing to noise considerations on the site, the Contractor is to utilize hydraulic drilling equipment unless safety considerations dictate otherwise.
4. Scheduling of blasts shall be coordinated with the Engineer and the Operations personnel.

B. Rock Cuts

1. Controlled blasting techniques shall be used for forming rock cut slopes at the locations shown on the Drawings.
2. Controlled blasting refers to the controlled use of explosives and blasting accessories in carefully spaced and aligned drill holes to produce a free surface or shear plane in the rock along the specified excavation backslope. Controlled blasting techniques covered by this Specification include presplitting (preshearing). When presplitting, the detonation of the presplit line shall be before the detonation of any production holes. Drill holes for presplitting shall be located at spacing that will achieve the desired effect with minimum overbreak and undesired irregularities.
3. Production blasting refers to the main fragmentation blasting resulting from more widely spaced production holes drilled throughout the main excavation area adjacent to the controlled blast line. Production holes shall be detonated in a controlled delay sequence.
4. The purpose of controlled blasting is to minimize damage to the rock backslope and to help ensure long term stability.
5. Rock cuts shall be excavated and mucked out fully to subgrade elevation as shown on the Drawings.
6. The work shall be conducted whether by blasting or other methods, so that the sides of the cut shall be left in a regular and safe condition.
7. In excavating side rock cuts, the Contractor shall exercise care and use precautionary methods so as not to break down, loosen or otherwise damage the supporting rock below subgrade level.
8. The Contractor shall be responsible for the methods used and for any damage to the rock structure resulting from the operations.

---

Section 31 05 16.02     Blasting

---

C.    Blasting Consultant

1.    The Contractor shall retain a blasting consultant, at the Contractor's expense, to prepare the blast design. The design shall include both the controlled and the production blasting. The consultant shall submit certified blast designs to the Engineer for quality assurance and record purposes.
2.    The consultant shall be an expert in the field of blasting, blast design and explosive products, and shall not be an employee of the Contractor, explosives manufacturer or explosives distributor.
3.    The blasting plan shall contain the full details of the drilling and blasting patterns and controls that the Contractor proposes to use for both the controlled and the production blasting.
4.    The plan shall contain the following minimum information:
  - a.    station limits of proposed shot.
  - b.    plan and section views of proposed drill pattern including free face, burden, blasthole spacing, blasthole diameters, blasthole angles, lift height and subdrill depth.
  - c.    loading diagram showing type and amount of explosives, primers, initiators, and location and depth of stemming.
  - d.    initiation sequence of blastholes including delay times and delay system.
  - e.    manufacturer's data sheets for all explosives, primers, delays and initiators to be used.
5.    All blasting plan submittals must be approved and signed by the blasting consultant.
6.    The blasting plan submittal is for quality assurance and record keeping purposes. Review of the blast plan by the Engineer shall not relieve responsibility from the Contractor for the accuracy and adequacy of the plan when implemented in the field.

D.    Presplitting Blasting

1.    For all slopes that require presplitting as indicated on the Drawings, presplitting shall be performed in accordance with the following requirements:
  - a.    Unless otherwise permitted by the Engineer, the Contractor shall completely remove all overburden soil and loose or decomposed rock along the top of the excavation for a distance of 5 m beyond the end of the

---

Section 31 05 16.02     Blasting

---

production hole drilling limits or to the end of the cut before drilling the presplitting holes

- b. The presplit drill holes shall be 50 to 75 mm in diameter at spacing approved in advance by the Engineer.
- c. The length of presplit holes for any individual lift shall not exceed 10 m unless the Contractor can demonstrate to the Engineer that the Contractor can stay within the tolerances and produce a uniform slope.
- d. The Contractor shall control the drilling operations by the use of proper equipment and techniques to ensure that no hole shall deviate from the plane of the backline slope (design slope) by more than 300 mm both parallel and perpendicular to the slope.
- e. Upon satisfactory demonstration, the length of holes may be increased to a maximum of 16 m upon written approval of the Engineer. If more than 5% of the presplit holes are misaligned in any one lift the Contractor shall reduce the height of the lifts until the 300 mm alignment tolerance is met.
- f. Presplit holes shall be drilled within 75 mm of the staked collar location. Holes drilled outside the 75 mm tolerance will not be allowed.
- g. All drilling equipment used to drill the presplit holes shall have mechanical devices affixed to that equipment to accurately determine the angle at which the drill steel enters the rock. Presplit hole drilling will not be permitted if these devices are either missing or inoperative.
- h. Presplit holes shall extend 10 to 20 m beyond the limits of the production holes to be detonated or to the end of the cut, as applicable.
- i. When the cut height will require more than one lift, a maximum 0.5 m offset between lifts shall be permitted to allow for drill equipment clearances. The Contractor shall begin the control blast hole drilling at a point, which will allow for necessary offsets and shall adjust at the start of lower lifts to compensate for any drift, which may have occurred in the upper lifts.

E. Production Blasting

- 1. All production blasting shall be performed in accordance with the blasting plan.
- 2. It is the Contractor's responsibility to take all necessary precautions in the production blasting so as to minimize blast damage to the rock backslope.

F. Vibration Control and Monitoring

- 1. It shall be the responsibility of the Contractor to meet the requirements of the Workers' Compensation Board.

---

Section 31 05 16.02     Blasting

---

2. When blasting near buildings, structures, wells, utilities or other works which may be subject to damage from blast induced ground vibrations, the ground vibrations shall be controlled by the use of properly designed delay sequences and allowable charge weights per delay.
- G. Overbreak in Solid Rock
1. Overbreak in solid rock excavation encountered in this contract is that portion of any such material which is excavated, displaced or loosened outside and beyond the slopes or grades as staked or re-established regardless of whether any such overbreak is due to the inherent character of any information encountered or to any other cause.
  2. All overbreak, as so defined, shall be removed by the Contractor at the Contractor's expense, and shall be Processed by the Contractor, as described in Division 3.
  3. The Permitted overexcavation tolerance, after removal of blasted rock, will be 1-0 m on the vertical faces specified and as shown on the Drawings. There will be no tolerance on the horizontal surfaces specified. Further, underexcavated areas on both vertical and horizontal surfaces shall be removed through secondary drill and blast or mechanical means.

#### 1.06 SAFETY

- A. Site safety provisions shall conform to all applicable federal, provincial and regional laws, the Owner's policies and procedures developed for the landfill site, ordinances, codes and regulations. Where any of these are in conflict, the most stringent shall apply. The Owner's site safety rules and provisions related to the Contractors' activities at Hartland landfill include but are not limited to: traffic control; personal protective equipment; response to fire; site operating hours; accident and incident reporting; summoning first aid; open excavations; and accommodation of other contractors and the public using or working on the landfill site.
- B. The Contractor will satisfy the Owner that a job site specific safety program has been developed in accordance with the Workers' Compensation Board occupational health and safety regulation and Part 3 of the Workers' Compensation Act. The Contractor is required to submit this documentation to the Owner prior to proceeding with the work.
- C. The Contractor is advised that the construction of this project is being performed adjacent to buried waste and refuse. During construction activity the potential exists to encounter pockets of landfill gas under pressure.
- D. The Contractor shall inform all workers, sub-trades and their workers and the public attending the job site of the potential for the presence of methane, landfill gases and

---

Section 31 05 16.02    Blasting

---

other potentially hazardous conditions and of the safety precautions to be followed while at the job site.

**1.07 USE OF ALL MATERIALS**

- A. The quarrying operation shall be such that essentially all shotrock shall be reduced to a 500 mm maximum size or as suitable for crushing, and shall all be crushed into the specified sizes and quantities.
- B. For those areas in the Contractor's blast pattern that fail to detonate and/or have not reduced the shotrock to the specified size, the Contractor will be responsible to re-blast where designated by the Engineer, at his own expense.

**1.08 SURVEY CONTROL**

- A. The Contractor shall provide a competent surveyor to lay out the work and to provide to the driller the location and required depths of all holes to be drilled.

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.03 – Minus 12.5 mm Screen Reject**

---

### **PART 1 General**

#### **1.01 SECTION INCLUDES**

- A. This section includes details on Minus 12.5 mm Screen Reject.

#### **1.02 STANDARDS**

- A. ASTM D422 Method of Particle Size Analysis of Soils

#### **1.03 SUBMITTALS**

- A. The Contractor shall submit Copies of all gradation (sieve analysis) performed by the Contractor's independent lab QC testing to the Engineer within one (1) hour of the completion of each test. Two gradation QC tests must be completed at each testing interval. Dry gradation QC tests must be produced within (1) hour of the specified material being produced, and Wet gradation QC tests must be produced within twenty (24) hours of the specified material being produced. The minimum frequencies of QC testing of the Minus 12.5 mm Screen Reject are as follows:
  - 1. One (1) per 250 m<sup>3</sup> on the first 2500 m<sup>3</sup> produced of each product.
  - 2. One (1) per 1000 m<sup>3</sup> on the remaining cubic meters produced of each product.
- B. The Contractor will advise if gradation QC testing results show gradations non-conforming to specifications. If the Contractor fails to remedy the defects as soon as reasonably possible, crushing and/or screening shall cease at the end of the shift and will not recommence until the crusher has been repaired or readjusted to produce the required gradation of aggregates.
- C. All off spec aggregate will be separated and immediately moved away from finished aggregate piles to prevent mixing with on-spec aggregate. The Contractor can blend off-spec aggregate back into the crushing/screening operation to reuse the material. Alternatively, the CRD will designate a place for off spec materials to be placed on the Hartland Landfill property. The Contractor will not be compensated for extra crushing or hauling as a result of the production of off-spec aggregates.

### **PART 2 PRODUCTS**

#### **2.01 GENERAL**

- A. The Minus 12.5 mm Screen Reject shall be screened by the Contractor. The aggregates shall be composed of inert, clean, tough and durable particles drain rock capable of withstanding the deleterious effects of exposure to water, freeze-thaw,

---

Section 31 05 16.03 Minus 12.5 mm Screen Reject

---

handling and spreading. The material to be capable of compacting to specified density.

- B. It is imperative that the aggregate have more than 75% sharp broken faces to ensure stability.
- C. The aggregate particles shall be uniform in quality and free from excess of flat and elongated particles. The particles shall have a gradation falling within the limits specified below.

**Minus 12.5mm Screen Reject**

| <b>Sieve Size<br/>Opening<br/>(mm)</b> | <b>Percent<br/>Passing<br/>(%)</b> |
|--|------------------------------------|
| 19                                     | 100                                |
| 12.5                                   | 100                                |
| 9.5                                    | 70-90                              |
| 4.75                                   | 40-70                              |
| 2.50                                   | 25-55                              |
| 1.25                                   | 16-42                              |
| 0.300                                  | 3-20                               |
| 0.075                                  | 0-8                                |
| 0.020                                  | 0                                  |

### **PART 3 EXECUTION**

#### **3.01 PROCESSING**

- A. When necessary to conform to the type of materials specified, aggregates shall be screened, washed, classified, mixed or otherwise processed with suitable equipment to meet specification requirements.

#### **3.02 APPROVALS**

- A. If, in the opinion of the Engineer, materials from the proposed source do not meet, or cannot reasonably be processed to meet specified requirements, locate alternative source or demonstrate that material from source in question can be processed to meet specified requirements.
- B. Should a change of material source be proposed during Work, advise Engineer 2 weeks in advance of proposed change to allow sampling and testing.
- C. Acceptance of material does not preclude future rejection if it is subsequently found to lack uniformity, or if it fails to conform to requirements specified, or if its field performance is found to be unsatisfactory.

---

Section 31 05 16.03    Minus 12.5 mm Screen Reject

---

3.03 HANDLING

- A. Handle and transport material to avoid segregation, contamination, and degradation.

3.04 STOCKPILING

- A. Stockpile material on site in locations identified by the Engineer.
- B. Stockpile material in sufficient quantities to meet project schedules.
- C. Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.
- D. Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of material. Stockpile material on ground but do not incorporate bottom 300 mm of pile into work.
- E. Separate different materials by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing.
- F. Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Engineer within 48 hours of rejection.

3.05 PLACEMENT

- A. Place and compact in accordance with the Drawings.

3.06 CLEANING

- A. Leave material stockpile site in tidy, well drained condition, free of standing surface water.
- B. Leave any unused material in neat compact stockpiles as directed by Engineer.

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.05– 12.5 to 25 mm Clear Crush**

**PART 3 EXECUTION**

**3.01 APPROVALS**

- A. If, in the opinion of the Engineer, materials do not meet, or cannot reasonably be processed to meet specified requirements, the Engineer will re-evaluate the screen size and specification to work with the available on site material source.
- B. Should a change of material source be proposed during work, advise the Engineer 2 weeks in advance of proposed change to allow sampling and testing.
- C. Acceptance of material does not preclude future rejection if it is subsequently found to lack uniformity, or if it fails to conform to requirements specified, or if its field performance is found to be unsatisfactory.

**3.02 HANDLING**

- A. Handle and transport material to avoid segregation, contamination, and degradation.

**3.03 STOCKPILING**

---

Section 31 05 16.06    25 to 75 mm Clear Crush

---

- A. Stockpile material on site in locations identified by the Engineer.
- B. Stockpile material in sufficient quantities to meet project schedules.
- C. Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.
- D. Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of material. Stockpile material on ground but do not incorporate bottom 300 mm of pile into work.
- E. Separate different materials by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing.
- F. Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Engineer within 48 hours of rejection.

#### 3.04 PLACEMENT

- A. Place and compact in accordance with the Drawings.
- B. Whenever possible, the drainage material shall be dumped onto the existing aggregate and pushed onto the Geotextile with an excavator bucket. The material must not be dropped from a height greater than 2.5 m unless dumped on a pad at least 500 mm thick.
- C. Care should be taken not to damage or creep the Geotextile layer. Damage to the Geotextile, as a result of placement of the drainage layer, shall be replaced or repaired, at the discretion of the Engineer, at the Contractor's expense.

#### 3.05 CLEANING

- A. Leave material stockpile site in tidy, well drained condition, free of standing surface water.
- B. Leave any unused material in neat compact stockpiles as directed by Engineer.

| <b>Sieve Designation (mm)</b> | <b>Percent Passing (%)</b> |
|-------------------------------|----------------------------|
| 150                           | 100                        |
| 100                           | 50-90                      |
| 75                            | 20-30                      |
| 50                            | 5-10                       |
| 25                            | 0                          |
| 19                            | 0                          |
| 16                            | 0                          |
| 12.5                          | 0                          |
| 9.5                           | 0                          |
| 4.5                           | 0                          |
| 2.5                           | 0                          |
| 1.250                         | 0                          |
| 0.300                         | 0                          |
| 0.075                         | 0                          |
| 0.020                         | 0                          |

**PART 3 EXECUTION**

**3.01 APPROVALS**

- A. The materials shall meet above gradation. Provide sieve results to Engineer.
- B. Should a change of material source be proposed during work, advise the Engineer 2 weeks in advance of proposed change to allow sampling and testing.
- C. Acceptance of material does not preclude future rejection if it is subsequently found to lack uniformity, or if it fails to conform to requirements specified, or if its field performance is found to be unsatisfactory.

**3.02 HANDLING**

- A. Handle and transport material to avoid segregation, contamination, and degradation.

---

Section 31 05 16.07 75 to 150 mm Clear Crush

---

### 3.03 STOCKPILING

- A. Stockpile material on site in locations identified by the Engineer.
- B. Stockpile material in sufficient quantities to meet project schedules.
- C. Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.
- D. Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of material. Stockpile material on ground but do not incorporate bottom 300 mm of pile into work.
- E. Separate different materials by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing.
- F. Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Engineer within 48 hours of rejection.

### 3.04 PLACEMENT

- A. Place and compact in accordance with the Drawings.

### 3.05 CLEANING

- A. Leave material stockpile site in tidy, well drained condition, free of standing surface water.
- B. Leave any unused material in neat compact stockpiles as directed by Engineer.

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.08 – 25 to 50 mm Washed Round Gravel**

---

### **PART 1 General**

#### **1.01 SECTION INCLUDES**

- A. This section includes details on 25 to 50 mm Washed Round Gravel as specified in the Drawings.

#### **1.02 STANDARDS**

- A. ASTM D422 Method of Particle Size Analysis of Soils

#### **1.03 SUBMITTALS**

- A. The Contractor shall submit Copies of all gradation (sieve analysis) performed by the Contractor's independent lab QC testing to the Engineer within one (1) hour of the completion of each test. Two gradation QC tests must be completed at each testing interval. Dry gradation QC tests must be produced within (1) hour of the specified material being produced, and Wet gradation QC tests must be produced within twenty (24) hours of the specified material being produced. The minimum frequencies of QC testing of the 25 to 50 mm Washed Round Gravel are as follows:
  - 1. One (1) per 250 m<sup>3</sup> on the first 2500 m<sup>3</sup> produced of each product.
  - 2. One (1) per 1000 m<sup>3</sup> on the remaining cubic meters produced of each product.
- B. The Contractor will advise if gradation QC testing results show gradations non-conforming to specifications. If the Contractor fails to remedy the defects as soon as reasonably possible, crushing and/or screening shall cease at the end of the shift and will not recommence until the crusher has been repaired or readjusted to produce the required gradation of aggregates.
- C. All off spec aggregate will be separated and immediately moved away from finished aggregate piles to prevent mixing with on-spec aggregate. The Contractor will not be compensated for extra work as a result of the production of off-spec aggregates.

### **PART 2 PRODUCTS**

#### **2.01 GENERAL**

- A. The 25 mm to 50 mm Washed Round Gravel shall be a Contractor supplied material and shall be composed of inert, washed and clean, tough and durable round drain rock particles capable of withstanding the deleterious effects of exposure to water, freeze-thaw, handling and spreading. The rock shall be rounded river gravel, free of angular broken fragments.

Section 31 05 16.08 25 to 50 mm Washed Round Gravel

---

- B. The aggregate particles shall be uniform in quality and free from excess of flat and elongated particles. The particles shall have a gradation falling within the limits specified below.

**25 to 50 mm Washed Rounded Gravel**

| <b>Sieve Size<br/>Opening (mm)</b> | <b>Percent Passing<br/>(by weight)</b> |
|------------------------------------|--|
| 75 mm                              | 100                                    |
| 50 mm                              | 100                                    |
| 40 mm                              | 40-90                                  |
| 25 mm                              | 10-60                                  |
| 10 mm                              | 0 – 10                                 |
| 2.5 mm                             | 0                                      |

**PART 3 EXECUTION**

**3.01 APPROVALS**

- A. If, in the opinion of the Engineer, materials from the proposed source do not meet, or cannot reasonably be processed to meet specified requirements, locate alternative source or demonstrate that material from source in question can be processed to meet specified requirements.
- B. Should a change of material source be proposed during Work, advise Engineer 2 weeks in advance of proposed change to allow sampling and testing.
- C. Acceptance of material does not preclude future rejection if it is subsequently found to lack uniformity, or if it fails to conform to requirements specified, or if its field performance is found to be unsatisfactory.

**3.02 HANDLING**

- A. Handle and transport material to avoid segregation, contamination, and degradation.

**3.03 STOCKPILING**

- A. Stockpile material on site in locations identified by the Engineer.
- B. Stockpile material in sufficient quantities to meet project schedules.
- C. Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.
- D. Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of material. Stockpile material on ground but do not incorporate bottom 300 mm of pile into work.

---

Section 31 05 16.08 25 to 50 mm Washed Round Gravel

---

- E. Separate different materials by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing.
- F. Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Engineer within 48 hours of rejection.

3.04 PLACEMENT

- A. Place and compact in accordance with the Drawings.

3.05 CLEANING

- A. Leave material stockpile site in tidy, well drained condition, free of standing surface water.
- B. Leave any unused material in neat compact stockpiles as directed by Engineer.

**\*\* END OF SECTION \*\***

---

## **Section 31 05 16.09 – Clay**

---

### **PART 1 General**

#### **1.01 SECTION INCLUDES**

- A. All labour, equipment and materials to install the compacted clay barrier layer as specified in the Drawings.

#### **1.02 STANDARDS**

- A. ASTM D422 Method for Particle Size Analysis of Soils
- B. ASTM D698 Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft<sup>3</sup> (600 kN-m/m<sup>3</sup>)).
- C. ASTM D1157 Test Method for Laboratory Compaction Characteristics of Soil Using Modified Compaction Effort
- D. ASTM D2216 Standard Test Method for Laboratory Determination of Water (moisture) Content of Soil, Rock, and Soil-Aggregate Mixtures
- E. ASTM 2487 Classification of Soils for Engineering Purposes (United Soil Classification System)
- F. ASTM D4318 Test Method for Liquid Limit, Plastic Limit, and Plasticity of Soils

#### **1.03 SUBMITTALS**

- A. At the time of tendering the Contractor shall provide a list of the potential clay sources he has explored during the tendering process for the provisional clay supply.
- B. A sample of the proposed clay source shall be sent to the Engineer immediately after Contract award. The Engineer will make an initial assessment of the material and advise whether to have the material tested at a laboratory. If the clay does not meet the satisfaction of the Engineer based on visual inspection, the Contractor will be required to find other sources and submit further samples for inspection until one is approved.
- C. The Engineer will be available immediately after Contract award to inspect clay at its source with the Contractor.
- D. Retain qualified soils testing laboratory to confirm clay meets specifications of this section. Submit test results to the Engineer minimum 14 days prior to placing clay soil or hauling soil to site.

### **PART 2 PRODUCTS**

#### **2.01 GENERAL**

Section 31 05 16.09 Clay

- A. Clay can be highly variable from place to place and source to source. Therefore, this specification should only be used as a guide. Ultimately, the clay product supplied by the Contractor will have to be approved by the Engineer.
- B. The Engineer's approval will be based on a visual inspection of the material and a review of the applicable test data.
- C. As a guideline, the Contractor shall supply clay that meets the following specifications:

**Clay Guidelines**

|   |
|---|
| <b>Shear Strength</b>   |
| Friction angle greater than 37 degrees.   |
| Interface friction angle with the geotextile greater than 37 degrees.                                   |
| <b>Plasticity</b>   |
| The moisture content of the clay must be greater than the plastic limit and less than the liquid limit. |
| The liquid limit must exceed 20%.   |
| The plastic limit must exceed 10%.  |
| The activity must exceed 0.3.   |
| <b>Grain Size</b>   |
| The amount of gravel size particles (4.75 mm) must not exceed 25%.                                      |
| The amount of fine size particles (0.075 mm) must be greater than 30%.                                  |
| The amount of clay size particles (0.002 mm) must be greater than 15%.                                  |
| <b>Hydraulic Conductivity</b>   |
| The hydraulic conductivity of the material must be less than $10^{-7}$ cm/s.                            |

- D. The clay must be free of unsuitable materials. Unsuitable materials in the clay include:
  - 1. Materials containing loam, roots, or organic matter.
  - 2. Frozen material or material containing snow or ice.
  - 3. Clays which are classified as inorganic clays of high plasticity in accordance with ASTM D2487.
  - 4. Soft and/or organic clays and silts of low strength.
  - 5. Frost susceptible silts and clays.
  - 6. Swelling clays.
  - 7. Rock and lumps of material with dimensions greater than specified layer thickness before compaction.

---

Section 31 05 16.09 Clay

---

8. Non cohesive granular soils.
  - E. It will be the responsibility of the Contractor to ensure that the clay is free of unsuitable materials. Each load delivered to the site may be inspected by the Engineer. The Engineer reserves the right to reject each load should unsuitable material be identified.
  - F. If the Contractor wishes to supply clay from multiple sources, it will be the Contractor's responsibility to demonstrate that the clay meets the specifications stipulated in this contract. Acceptance of any alternate clay source will be at the discretion of the Engineer.
  - G. During excavation and transport, and during storage during exceptionally hot, dry or wet weather, the moisture content may change, especially on the surface of the stockpiles. Maintaining the desired moisture content will be the responsibility of the Contractor. If necessary, the Contractor shall be responsible for adding water to the clay, tarping the stockpiles and/or keeping the stockpile properly graded at all times to prevent accumulation of water.

## 2.02 INITIAL TESTING

- A. Based on a visual inspection of the Contractor's proposed clay, the Engineer will advise if laboratory testing is warranted.
- B. As a minimum, the Contractor will be required to submit clay samples to an approved lab to test for the following:
  1. Grain size analysis.
  2. Hydraulic conductivity (permeability).
  3. Standard proctor (to determine optimum moisture and max. dry density)
- C. If the lab results indicate that the permeability is too high or that there is not enough clay in the material further investigation will be required to locate another source. Visual inspection and testing may then be completed again until an adequate product is found.
- D. Test results for the Owner Supplied Clay will be made available upon request.

## PART 3 EXECUTION

### 3.01 HANDLING

- A. Handle and transport clay to avoid segregation, contamination and degradation. Should a change of material source be proposed during Work, advise Engineer 2 weeks in advance of proposed change to allow sampling and testing.

### 3.02 STOCKPILING

---

Section 31 05 16.09 Clay

---

- A. Stockpile clay on site in locations identified by the Engineer. Do not stockpile on completed pavement surfaces.
- B. Stockpile aggregates in sufficient quantities to meet project schedules.
- C. Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.
- D. Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of aggregate. Stockpile aggregates on ground but do not incorporate bottom 300 mm of pile into work.
- E. Separate clay by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing.
- F. Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Engineer within 48 h of rejection.

### 3.03 CLEANING

- A. Leave clay stockpile site in tidy well-drained condition, free of standing surface water.
- B. Leave any unused clay in neat compact stockpiles as directed by Engineer.

### 3.04 WATER SUPPLY

- A. The Contractor shall be responsible for supplying any water required to bring and/or keep the clay at the required moisture Content.
- B. Water will be available at the site location but it shall be the responsibility of the Contractor to determine if this supply is adequate and if the Owner and scale house staff approve of its use. If it is adequate and acceptable, scale and scale house activities should not be interrupted as a result of its use.

### 3.05 GENERAL CLAY PLACEMENT SPECIFICATIONS

- A. The Contractor should remove any large diameter rocks from the clay prior to placement on the slope.
- B. For this Contract, the Contractor shall have the clay:
  - 1. Broken into clumps smaller than 50 mm by multiple passes of the bulldozer.
  - 2. Brought to the specified water content, which is defined as being 2% to 4% wet of the optimum moisture content as indicated by a Standard Proctor Test. Should geotechnical testing indicate that the clay is drier than 2% wet of the Standard Proctor optimum moisture content than the Contractor shall add and blend in water prior to compaction. Should the moisture content be more than 4% wet of the Standard Proctor optimum moisture content then the Contractor shall utilize whatever means are necessary to dry out the material or blend it with drier clay.

---

Section 31 05 16.09 Clay

---

- 3. Mixed by mechanical means such as a bulldozer, tiller or discs to provide a uniform distribution of water content throughout the lift prior to compaction.
- C. Any cobbles, boulders or clods (etc.) larger than or equal to 100 mm in diameter are to be broken up or removed and stockpiled in a waste storage area designated by the Engineer.
- D. Any foreign objects (e.g. sticks, roots, organic matter, etc.) are to be removed at the Engineer's discretion and stockpiled in a storage area designated by the Engineer.

### 3.06 SUBGRADE PREPARATION

- A. In areas where the clay is not being placed on a geotextile separation layer, the Contractor shall remove all unsuitable material that might interfere with proper placement and compaction of the clay barrier from the surface on which the clay is to be placed and any other work surfaces on which the clay may be stored.
- B. The existing ground surface shall be proof rolled to the Engineer's satisfaction prior to commencing construction of the clay barrier.
- C. The subgrade shall be inspected and approved by the Engineer prior to placement of the first clay lift.

### 3.07 WATERING

- A. If weather conditions and moisture contents in the clay are such that watering is required, the Contractor shall add water to the clay to achieve the required moisture content. The Contractor shall maintain suitable watering equipment on the site. Watering shall be performed as directed by the Engineer to ensure optimum moisture conditions for clay compaction.
- B. Water in excess of that required to achieve a moisture content 2% to 4% wet of Standard Proctor Optimum moisture content may be added only with the Engineer's approval, to obtain the specified density.
- C. Water shall be supplied uniformly from a water truck with a pressure type distributor equipped with suitable control apparatus and a spray bar and nozzles similar to those used on asphalt distributors. Splash plate type distributors or distributors with spray bars which discharge jets of water will not be approved by the Engineer.

### 3.08 CLAY PLACEMENT

- A. In general, the clay layer shall be placed in horizontal lifts not exceeding 200 mm. Final clay berm thickness will be up to 4,000 mm measured in a direction normal to the clay surface after compaction. Other areas may require different clay thickness, as shown on the Drawings.
- B. The clay barrier shall be constructed in consecutive, individual compacted lifts and the final thickness after compaction shall be as shown on the Drawings.

---

Section 31 05 16.09 Clay

---

- C. Each lift shall be oriented parallel to the slope and shall extend fully from slope toe to crest. The clay shall be spread upslope only except in ditches where it may be spread parallel to the centre line.
- D. Each lift shall be compacted as defined by the Engineer using the Contractor's choice of equipment. The compaction equipment used by the Contractor shall be the same as or equivalent to the Compactor used during the Test Day.
- E. The clay in each lift must be compacted to 95% of the Modified Proctor maximum dry density as determined by ASTM D1557. Compaction results as measured during construction on the Test Day will be used to determine the number of passes required to achieve the specified density. The required number of compactor passes may be increased at any time by the Engineer if test results indicate that the specified density is not being attained.
- F. The clay material, when compacted to at least 95% of the Modified Proctor maximum dry density, must have an in-situ hydraulic conductivity that is less than  $1 \times 10^{-6}$  cm/s.
- G. A competent bond shall be achieved between the each new lift and the previous lift. Prior to placing each new lift, the existing lift shall be roughened by two passes of the compactor. The competence of the bond shall be approved by the Engineer.
- H. Materials shall be placed in a manner that provides positive drainage at all times. Water shall not be allowed to pond on surfaces under construction.
- I. Each lift shall be tested by the Contractor as specified in Construction Quality Evaluation.
- J. In advance of inclement weather and at the completion of each day, the exposed surface shall be smoothed with a smooth drum or grid roller compactor. Prior to recommencing construction operations, the surface shall be roughened with a padded drum soil compactor or a bulldozer.

### 3.09 REQUIREMENTS FOR PLACING ADDITIONAL LIFTS

- A. In cases where multiple lifts are constructed, the Contractor shall not place a new lift unless the portion of the underlying lift to be covered has been approved by the Engineer. The Engineer will use the following criteria to assess satisfactory completion:
  - 1. No water content is less than the Proctor optimum.
  - 2. The average dry density meets or exceeds 95% of the Modified Proctor maximum dry density.
  - 3. The minimum dry density exceeds 90% of the Modified Proctor maximum dry density.
  - 4. The upper surface of the completed lift is not desiccated or cracked.

---

Section 31 05 16.09 Clay

---

### 3.10 FAILURE TO MEET SPECIFICATIONS

- A. If the clay meets the specification for moisture content but fails to meet the specification for dry density then the number of passes of the compactor shall be increased until the density specification is met. The additional compaction and re-testing shall be carried out at the Contractor's expense
- B. If, based on field tests, clay does not meet the specification for water content, the lift shall be scarified. Additional water shall be added as required. The problem lift shall then be re-compacted and re-tested by the Engineer. The scarification, addition of water, re-compacting and re-testing shall be carried out at the Contractor's expense.

### 3.11 SHAPING AND PROTECTING THE FINAL SURFACE

- A. The final surface shall be rolled with a smooth drum roller compactor operating in a down slope direction. Rolling shall achieve a final surface free of any ruts. The top surface shall be shaped by the Contractor by placing and compacting additional clay as required to meet the design grades and specifications. The final clay dimensions shall meet design grades.
- B. The clay surface shall be kept moist at all times including weekends and statutory holidays by the Contractor. The overlying materials shall be placed over the clay as soon as practical after construction. The Contractor may wish to commence installing the primary membrane periodically each time a reasonably large area of clay barrier is completed.
- C. In the event that the clay surface dries, freezes or cracks, the damaged section shall be removed and replaced by the Contractor to the satisfaction of the Engineer. In the event that the surface is eroded during heavy rains, the Contractor shall repair all damaged areas at his expense.
- D. Each day, the Engineer will make a visual inspection to determine if adequate measures are being taken by the Contractor to protect each layer of soil from desiccation. Additional water content tests will be performed by the Engineer at the Contractor's expense when desiccation is suspected.
- E. Clay shall not be compacted in standing water. Standing water must be removed first with appropriate dewatering.

### 3.12 EXCESS PRECIPITATION

- A. The Contractor shall smooth the clay surface with a smooth drum or grid roller compactor and then suspend operations whenever climatic conditions, as determined by the Engineer, are unsatisfactory for placing fill to the requirements of this Section.
- B. After occurrences of heavy precipitation, equipment shall not be operated on previously placed material until the material has dried sufficiently to prevent occurrence of excessive rutting, as determined by the Engineer.

---

Section 31 05 16.09 Clay

---

- C. The Contractor shall be responsible for all dewatering and control of excess precipitation.
- D. The Contractor shall be responsible for removal and reconstruction of any areas softened by rain and/or standing water.

### 3.13 CONSTRUCTION QUALITY EVALUATION

- A. Full time inspection of clay placement and compaction may be provided by the Engineer. Inspection services and tests that may be carried out by the Engineer on a daily basis during the construction will include the following:
  - 1. Inspection of each load for presence of unsuitable materials.
  - 2. Inspection of the lift thickness as loosely placed, and as compacted.
  - 3. Inspection of the action of the compaction and hauling equipment on the construction surface (equipment penetration, pumping, cracking, etc.)
  - 4. Inspection of the number of passes used to compact each lift.
  - 5. Measurement of the in-situ density and water content of the clay materials and of the subgrade backfill.
  - 6. Evaluation of clay bonding between lifts. This shall be conducted using test pits dug using a grub hoe with labour provided by the Contractor. All test pits shall be excavated in a manner acceptable to the Engineer. Depths of the test pits shall be no greater than 300 mm. All test pits shall be backfilled and compacted.
- B. If multiple clay sources are being used by the Contractor, the Contractor will take four samples of the clay material from each of the proposed borrow areas for Standard Proctor compaction tests. The equipment required to obtain the samples will be provided by the Contractor. The cost of the testing will also be at the Contractor's expense. The average of the four optimum Moisture Contents and the average of the four maximum dry density results from the Standard Proctor tests will be calculated and used by the Engineer to establish the Moisture Content and the 95% of Standard Proctor maximum dry density specifications. The results will be provided to the Contractor.
- C. A number of other soil tests may be carried out throughout the construction of the clay barrier by the Engineer. The Contractor shall co-operate fully with the Engineer during testing.
- D. The following table summarizes the number of geotechnical tests and test protocols that may be adopted by the Engineer during the Construction Quality Evaluation.

Section 31 05 16.09 Clay

**Clay QA/QC Specification**

| Parameter                                   | Test Method    | Minimum Testing Frequency (b) |
|---|----------------|-------------------------------|
| Percent Clay (a)                            | ASTM D422      | 1 per 500 m <sup>3</sup>      |
| Percent Gravel (c)                          | ASTM D422      | 1 per 500 m <sup>3</sup>      |
| Liquid & Plastic Limits                     | ASTM D4318     | 1 per 500 m <sup>3</sup>      |
| Water Content                               | ASTM D4643 (d) | 1 per 200 m <sup>3</sup>      |
| Water Content (e)                           | ASTM D2216     | 1 per 500 m <sup>3</sup>      |
| Compaction Curve<br>(alternate source only) | ASTM D698      | 4 before starting<br>Test Day |
| Construction Inspection                     | Observation    | Continuous                    |

Notes:

- (a) Percent clay is defined as percent particles smaller than 0.002 mm.
- (b) In addition, at least one test will be performed each day that soil is excavated or placed, and additional tests will be performed on any suspect material observed by QA personnel.
- (c) Percent gravel is defined as percent retained on the No. 10 sieve.
- (d) This is a microwave oven drying method. Other methods may be used, if more appropriate. Any method used besides direct drying using ASTM D2216 should be calibrated against ASTM D2216 for the on-site soils.
- (e) Microwave oven drying and other rapid measurements methods may involve systematic errors. Conventional oven drying (ASTM D2216) is recommended on every fifth sample taken for rapid measurement. The intent is to document any systematic error in rapid water content measurement.
- E. Copies of test reports will be made available to the Contractor.
- F. The sampling pattern selected by the Engineer shall be random within each region of the clay barrier. The locations where samples are taken shall be carefully recorded together with the date, time and weather conditions.
- G. The sampling pattern selected by the Engineer for each lift shall be staggered from that in the overlying or underlying lifts.
- H. The Contractor shall fully cooperate with the Engineer in conducting the quality control inspection. He shall provide any labour, equipment, and materials to assist

---

Section 31 05 16.09 Clay

---

the Engineer in completing clay quality control tests as required. The labour requirement shall not exceed one man hour per day.

- I. All perforations in the clay shall be backfilled with a moist clay-bentonite mixture. Perforations that must be backfilled shall include, but not be limited to the following:
  - 1. Nuclear density test probe locations.
  - 2. Thin walled Shelby Tube sampling locations.
  - 3. Test pit locations.
- J. All backfill for perforations shall be broken up such that the average particle size is less than one half the diameter of the perforation, or 25 mm, whichever is smaller. For the nuclear density test probe locations and the Shelby Tube locations, the fill shall be placed in lifts equal to two thirds of the thickness of the compacted lift and shall be recompact using a tamping rod, or Standard Proctor hammer or hand held vibratory compactor, depending on the size of the perforations. A hand held vibratory compactor shall be used when backfilling test pits.

**\*\* END OF SECTION \*\***

## APPENDIX A

### OWNER'S NOTIFICATION OF HAZARD

Making a difference...together

## OWNER'S NOTIFICATION OF HAZARD

|   |   |                     |
|---|---|---------------------|
| Contract #: 30.22.06-03   | Location: Hartland Landfill   | Date: Sept 15, 2023 |
| Contractor:   |   | Phone:              |
| Contractor Representative:  |   | Phone:              |
| Prime Contractor:   |   |                     |
| CRD Representative:   |   | Phone:              |
| <p>Listed below are pre-existing known hazards identified by the Capital Regional District which are relevant to Hartland Landfill. The list may not be all-inclusive. The Contractor must assess the work area to determine if other hazards exist. If the Contractor identifies additional hazards, the Contractor must notify the CRD project manager or designate.</p> <p>The Contractor is responsible for addressing these hazards and other hazards identified during the course of the project.</p> |   |                     |
| Hazard:   | Details:  |                     |
| Landfill Gas: Carbon Dioxide, Methan, Hydrogen Sulfide, Low levels of Oxygen  | The site is adjacent to an active disposal area for domestic and commercial garbage. Landfill gas is a bi-product of garbage decomposition. Landfill gas may migrate through the ground and could be present in excavations. No smoking on site. Remain on designated roads. Atmospheric monitoring required if entering tanks and excavations. On site cutting, welding and grinding requires approval of Hartland administration. |                     |
| Underground Utilities   | Numerous underground utilities on-site; water, leachate, landfill gas, electrical, sewer drains. Ensure that all utilities are located prior to ground disturbance.   |                     |
| Falling Rock  | Use caution when scaling and working near benched quarry or blasted rock faces.   |                     |
| Steep Rock Faces  | Steep rock faces (8 – 15 meters high) adjacent to the contract work area. Ensure personnel are working outside high risk zones for falling rock.  |                     |
| Steep Slopes and Water Hazards  | Internal access roads and water collection lagoons have steep slopes, banks and narrow shoulders. Exercise caution when driving on internal access roads.   |                     |
| Mobile Equipment  | Heavy equipment operated throughout the site. Ensure visibility while working in the vicinity of mobile equipment   |                     |
| Multi-Employer Work Site  | In addition to the landfill operations contractor, there may be other contractors working onsite. There is a new Landfill Gas Facility being constructed on North Toe Road by the existing flares. That contractor is prime in their work area and Contractor shall coordinate with CRD on site coordination when hauling on internal roads.  |                     |

|  |   |
|--|---|
| Chemical Hazards   | Varying quantities of hazardous goods are received and temporarily stored at the landfill that may be reactive, explosive, toxic or flammable in nature. Utilize proper handling and storage procedures. Protect this area from any source of heat.                                   |
| Airborne Silica  | Contractor to provide and implement a silica and rock dust exposure control plan as per WorkSafe BC Occupational Health Safety Regulation, Sections 6.110-6.115, submitted with the Contractor's Site Specific Safety Plan.   |
| Fire   | Ignition of pockets of methane gas may result in fire or explosion. In addition, exposed decomposing waste may result in spontaneous combustion.  |
| Health   | Oxygen deficiency in trenches, ditches, excavations or in any underground structure may be sufficient to overcome, injure workers, or cause death.  |
| Buried refuse stability  | Contractors must ensure they are aware areas where excavations are located. Excavations next to landfilled refuse may collapse.   |
| Water  | There are water hazards at varying depths on the landfill property. Floation devices must be worn while working above the water or within one (1) metre of the water's edge.  |
| Slopes   | There are areas of steep slopes on internal haul roads. Contractors must ensure they are aware of sloped areas and establish safe turning radius.   |
| Slip and Fall  | Wet grass or sidewalk could create slip and fall hazard.  |
| Traffic  | The general public, other contractors and CRD staff utilize landfill roads. Contractors must ensure they are aware of their surroundings with regard to traffic direction and speed limits. Exercise caution when entering or crossing roads. Follow posted signage and speed limits. |
| Power lines  | BC Hydro transmission and distribution lines are located throughout the landfill, contractors must ensure safe clearances are established while moving equipment around the landfill.   |
| Blasting   | There is active blasting taking place on site. Contractors must ensure they are aware of the location and time of blasts, this is coordinated through the site safety officer/designate.  |
| Roads – Internal & Service   | Exercise caution at all times when operating a motor vehicle or mobile equipment on Hartland roadways. Road widths and grades vary on site.   |
| <div style="display: flex; justify-content: space-between;"> <div>Date:</div> <div>Signature:</div> </div> |   |

Distribution: Project Manager, Contractor, Safety Officer, File

## APPENDIX B

### HARTLAND LANDFILL CONTRACTORS' SITE SAFETY REQUIREMENTS

# **Hartland Landfill**

## **Contractor Site Safety Requirements**

### **COVID-19 Response**

As of March 2020, the CRD has implemented new safety and hygiene measures for staff and contractors.

If any of the following apply, please wear a disposable surgical mask and refer to the BC Centre for Disease Control for information.

- Recent fever greater than 38°C
- Experiencing one or more of the following:
- Cough, shortness of breath, fatigue
- Contact with anyone confirmed or suspect to have COVID-19 in the last 14 days

Safety orientations are required prior to doing any work at the landfill. Depending on the number of people, there are three locations orientations can take place:

- The Administrative Building conference room (Max 2 people)
- Outdoors (2 meter physical distancing in effect)
- The Learning Centre (Max 10 people)

Surfaces and high touch points in both indoor areas are disinfected before and after use.

We are encouraging contractors/staff to sanitize their hands prior to coming into the office or entering the Learning Centre. Hand sanitizer is mounted on the wall at the entry ways into the administrative building and Learning Centre.

### **IN THE EVENT OF AN EMERGENCY, OR TO SUMMON FIRST AID:**

**Contact any CRD employee to report by radio or  
CALL 911, then call:**

**Emergency Line 250.360.3414 (public scales)  
Monday to Friday 9am to 5pm  
Saturday 7am to 2pm**

**Emergency Cell phone 250.415.3016  
Monday to Friday 6:30am to 9am  
Saturday 6:30am to 7am and 2:30pm to 3:30pm**

### **HARTLAND FIRST AID ATTENDANT**

Hartland coordinates all first aid with contractors on site. The First Aid Facility is located in the Hartland Administration Building. A Level 2 Occupational First Aid Attendant is available between the hours of 06:30 and 17:30 Monday to Friday and 06:30 and 15:30 on Saturday. If a contractor elects to work outside these hours, they must have permission of the Manager, Solid Waste Operations, and the provision of First Aid Services shall be the responsibility of the individual contractor and must conform to the WorkSafeBC Occupational First Aid Regulation sections 3.14-3.21.

## Hartland Landfill – Contractor Site Safety Requirements

---

If you are transporting any injured worker to the First Aid Station, notify the Hartland Landfill office, or a CRD employee.

### Disaster Gathering Point

In case of natural disaster, all persons are to proceed to either the primary or secondary gathering points as seen below. The primary muster station is located in the parking lot south of the landfill main office complex and is marked with a triangular sign reading “**Emergency Evacuation Gathering Point**”. Individuals on the north end of site will proceed to landfill entrance found at Willis Point Rd. For a map of said locations, see Appendix C – Disaster Gathering Points (Muster Station Locations).

### GENERAL SAFETY REQUIREMENTS

The contractor shall be solely and completely responsible for ensuring the safety of all persons including employees, sub trades and property on the job site during the performance of the work. This requirement shall apply continuously and not be limited to normal working hours.

Safety provisions shall conform to all applicable federal, provisional and regional laws, WorkSafeBC Occupational Health and Safety Regulations, and the owner’s specifications, policies and procedures developed for the landfill. Where any of these are in conflict the more stringent shall apply.

Hartland Landfill is a public site. Contractors are reminded that they are expected to conduct themselves with decorum and consideration for the safety of all site users and contractor groups.

### Compliance with Bylaws and Regulations

Under the authority of CRD Bylaw 3881, fines range from \$100-\$200. This will be assessed and collected by the Bylaw Officer for Bylaw violations including but not limited to:

1. Vehicle load exceeds the permitted weight limits set out in the *Motor Vehicle Act* or *Commercial Transport Act*. Small loads cannot exceed a gross vehicle weight of 5,500kg when accessing the recycle or public bins area. Large commercial loads greater than 5,500kg are not permitted at the public south end of the landfill.
2. Vehicle exceeds the posted speed limits. Speed limit is **30 km/hr**.
3. Vehicle load is not secured properly to the vehicle so as to pose a danger.
4. Smoking on the Hartland Landfill site.

### Site Conduct

1. As per the Tobacco and Vapour Products Control Act Section 2.3 (1) (a) (ii), no smoke tobacco, lighted tobacco or activated electronic cigarette is permitted on the landfill property or construction sites.
2. No drugs or alcohol are permitted on the landfill property or construction sites.
3. No firearms are permitted on the landfill property or construction sites.
4. Personal vehicles may park in designated areas only.

### **LANDFILL HAZARD AWARENESS**

Several hazards unique to the Hartland Landfill have been identified, to which your full attention is required. Job and site-specific safety plans may be required.

#### **Landfill Gas and Waste Material Hazards**

Contractors undertaking works on, or adjacent to, buried refuse are cautioned to the presence of potential health, fire, and buried material stability hazards such as:

##### **Health Hazards**

1. Oxygen deficiency in trenches, ditches, excavations or in any underground structure may be sufficient to overcome, injure workers, or cause death;
2. Build-up of highly toxic or flammable gases such as methane and hydrogen sulphide may be sufficient to overcome and injure workers, or cause death;
3. Contact with refuse could cause skin irritations, cuts, or abrasions.

##### **Fire Hazards**

1. Ignition of pockets of methane gas may result in fire or explosion.
2. Exposed decomposing waste may result in spontaneous combustion.

##### **Buried Refuse Stability Hazards**

Excavations in or adjacent to landfilled refuse may be unstable. Contractors shall exercise additional caution to ensure workers are not exposed to injury due to cave-in or collapse.

Water hazards of varying depths exist on the landfill. Flotation devices must be worn while working above the water or within one (1) metre of the water's edge (See **Personal Protection Equipment**). All water, with the exception of delivered water or municipal water, is not suitable for drinking or bathing.

##### **Slope Hazards**

Contractor personnel are advised of steep slope sections on internal haul roads. Contractors must familiarize themselves with the slopes and establish safe turning areas suitable to their turning radiuses.

##### **Traffic Hazards**

Contractor personnel are advised that the general public, CRD staff and various on-site contractors heavily utilize Hartland Landfill roads. Contractors, while in or out of their vehicles, must be alert to other vehicles and equipment, foot traffic, traffic control personnel, changes to traffic directions and speed limits, and familiarize themselves with the location of Hartland Landfill road intersections. (See **Traffic Control** section).

##### **Power Lines**

BC Hydro power lines are situated throughout the landfill property. Transmission lines are located on the east side of the landfill. Safe clearances from the power lines, as per Occupational Health & Safety Regulation section 19.24.1. Minimum approach distance, must be established while moving equipment on and off the landfill property and while working on the landfill property.

### **Landfill Leachate**

Water percolating through the landfill and coming in contact with refuse produces leachate. Leachate contains metals, nutrients and organic compounds and is contained within the landfill. For more information refer to *Hartland Landfill Leachate System, Spill Response Plan version 8.0*.

### **Silica**

Rock and sand are made from the mineral Silica and can be found in concrete, cement and granite. Exposure to silica can be through blasting of concrete structures, drilling rock and road construction. Personnel contracted at the landfill must familiarize themselves with the locations where there may be silica exposure.

### **Asbestos**

Asbestos containing material is accepted at the landfill in a designated disposal area. Asbestos is a fibrous mineral that was used in building material for insulation, chemical resistance and fire protection. Contractor personnel are advised to know the location for asbestos disposal.

### **Dust Hazard**

Seasonally, there can be a dusty environment at the site depending on weather and activity.

## **SITE SAFETY REQUIREMENTS**

### **Site Access**

1. Contractors are to sign in the contractor sign in book which is located at the Administration building; this is to be completed prior to the commencement of any work. When leaving site for the day, Contractors are to check off site at the Administration building or the general public weigh scale should the office be closed.
2. Contractor personnel are permitted to enter only the work area in which their contract work is being performed.
3. Contractor access hours 7am-5pm Monday-Friday and 7am-2pm on Saturdays. Accessing the site outside these hours requires approval by site management.

### **Working Alone**

If you are not in physical contact with a co-worker while on site, a check-in procedure must be in place with your employer.

### **Housekeeping**

1. Materials and equipment must be stored within the contractor's designated work area, unless otherwise arranged.
2. Materials and equipment must be stored in order to permit safe operations within the contractor's work site and safe access and egress to the work area.
3. WHMIS regulated chemicals must be labelled as per the legislation and safety data sheets must be easily accessible.

### **Personal Protective Equipment**

1. Contractor personnel must wear personal protective equipment, including as a minimum, high visibility apparel, and safety footwear while within:
  - any contractor's work area
  - the active landfill area
  - or any other area where a physical or chemical hazard may exist.
2. Contractor personnel must wear personal flotation devices while working over or within one (1) metre of water hazards.
3. Contractor personnel must implement a fall protection system while working at elevations of three (3) meters or greater.
  - a. A written fall protection plan must be submitted to the CRD when there is work being at a location without guardrails, and from which a fall of 7.5ft or greater may occur.
4. Contractor personnel must utilize rescue equipment in potentially unstable or hazardous atmospheric work environments (i.e., confined spaces).
5. Contractor personnel must utilize continuous air monitoring devices capable of measuring carbon monoxide, oxygen, lower explosive limit for methane and hydrogen sulphide when working in potentially hazardous atmospheres.
6. Contractor personnel must maintain respirator maintenance and fit-testing records on-site.
7. Contractor personnel must maintain emergency eye wash stations within easy access to the workers.

### **Blasting (refer to project specifications)**

1. The contractor must notify the Construction Coordinator/Project Manager in writing of the proposed blasting schedule.
2. No blasting shall be permitted without prior authorization from the Construction Coordinator/Project Manager.
3. The contractor's warning procedure and blasting signal code must be conspicuously posted at the blasting site.
4. Contractors must receive prior approval from BC Hydro if blasting in the vicinity of power lines.

### **Reporting**

Reporting procedures shall comply with the WorkSafeBC requirements for accidents or incidents involving the contractors' employees, sub-contractors or equipment while on site. All accidents or incidents shall be reviewed with the Construction Coordinator/Project Manager or Supervisor, Safety & Technical Services (or designate).

WorkSafeBC incidents requiring immediate notification include the following:

- A worker is seriously injured or killed on the job.
- There is a major structural failure or collapse of a building, bridge, tower, crane, hoist, temporary construction support system, or excavation.

## **Hartland Landfill – Contractor Site Safety Requirements**

---

- There is a major release of a hazardous substance.
- There is a diving incident as defined by Occupational Health & Safety Regulation 24.34.
- There is a dangerous incident involving a fire or explosion that had potential for causing serious injury to a worker.
- There is a blasting incident that results in personal injury or injuries.

### **Cutting, Welding, Grinding or Sawing**

1. Arc or gas welding, or work activity where open flame or potential for spark is present shall not be permitted in trenches, excavations, ditches, or enclosed areas, unless performed under ventilation and continuously monitored for gases by contractor personnel. Cutting, welding, sawing, or grinding activities must be pre-approved by either the Construction Coordinator/Project Manager (for capital works projects), or by the Hartland Landfill Safety Officer or Landfill Technician (for operations contractors). Notification of the hot work procedure is required to be submitted to the Project Manager/Hartland Supervisor, Safety & Technical Services (or designate).
2. Persons welding or cutting shall be responsible for the safe preparation of the work area and inspection thereof.
3. Cylinders of compressed gas shall not be permitted inside any trench, excavation, or confined space.
4. Torches and hoses used for welding or cutting shall be removed from the trench, excavation, or confined space when not in use and when the work area is vacated.
5. Fire extinguishers must be positioned at the welding/cutting work area. A minimum of two, 18lb. capacity ABC rated extinguishers shall be maintained at the welding/cutting area at all times.
6. The work area shall be fully inspected at the completion of the work activity to locate and extinguish any hot spots.

### **Excavations/Trenches/Drilling (refer to project specifications)**

1. The contractor or subcontractor must notify the Construction Coordinator/Project Manager (for Capital Works projects) or Supervisor, Safety & Technical Services or Landfill Technician (for operations projects) at least 24 hours prior to commencement of excavations and submit proposed excavation locations, depths, and traffic controls for approval.
2. All excavations must be guarded by barriers, guardrails, or covers when left unsupervised.
3. Excavations across roads must be properly barricaded and signed, must not interrupt passage of traffic, nor create a hazard to that traffic. Contractor shall supply traffic control attendants as required.
4. Excavations must be ventilated while workers are in or near the excavation.
5. Contractor personnel must wear personal gas monitors capable of measuring lower explosive limit for methane, hydrogen sulphide, carbon monoxide, and oxygen deficiency at all times while working in or near excavations.
6. Standby personnel capable of providing rescue response and fire watch duties, must be stationed at the excavation at all times while work is conducted in the excavation.
7. A minimum of two, 18lb. capacity ABC extinguishers shall be maintained at the active excavation work area.
8. Electric motors utilized in excavation areas and below ground shall be intrinsically safe.

### **Electrical Safety**

1. Unauthorized personnel shall not enter electrical switch rooms or controls rooms.
2. Opening or closing of any switch, disconnect or circuit breaker must be pre-arranged with the Construction Coordinator/Project Manager (for capital works projects) or with the Supervisor, Safety & Technical Services (or designate).
3. Electrical Contractors must sign in at the Administration building in the electrical Contractor check in book and follow the procedure as noted on the check in/out sheet.
4. Excavations must not proceed prior to obtaining location of utilities from the Construction Coordinator/Project Manager (for capital works projects) or from the Hartland Safety Officer or Landfill Technician (for Hartland operations projects).
5. The contractor shall ensure required clearances are maintained from overhead power lines while transporting or operating equipment in the vicinity of overhead power lines.
6. All contractor personnel must know how to contact the Hartland office in the event of a fire.
7. All contractor personnel must know the area of the Hartland property in which they are working so that they may properly locate the fire when notifying the Hartland office (see attached map).
8. All roads in the contractor's work area must be kept clear to allow access for firefighting equipment.
9. Due to the extreme fire hazard, contractors must obey the no smoking policy at Hartland Landfill. Smoking and open flame pose a significant risk and contractors will be held responsible for all injury and damages resulting from fire or explosion.

### **Immobilization of CRD Equipment**

Contractor personnel must have written approval from the Construction Coordinator/Project Manager (for capital works projects), or the Supervisor, Safety & Technical Services (or designate) or Landfill Technician (for Hartland operations projects) prior to de-energizing, immobilizing, and locking-out any CRD equipment.

### **Fire Protection**

Fire protection is provided by the Saanich Fire Department. In the event of a fire, Dial 911 to summon the Saanich Fire Department, and then immediately contact the Hartland Landfill field staff or office staff. There is a Fire Safety Plan for the site; copies are available at the site office and security trailer.

### **Traffic Control**

1. Effective and safe means of traffic control must be implemented to ensure safe access and egress to and past the contractor's work site.
2. Traffic control must comply with the Ministry of Transportation and Highways Traffic Control Manual for Work on Roadways.
3. Traffic controllers must be trained in traffic control.
4. Traffic controllers must be suitably attired for visibility and safety.
5. Traffic control signage must be well maintained and visible.

### **Mobile Construction Equipment**

Mobile construction equipment must be maintained and equipped with operational:

- Rear view mirrors
- Head lights and reversing lights
- Emergency brakes
- Windows which permit visibility
- ABC Fire extinguishers (min 10 lb.)
- Rollover protection as required
- Seat belts

### **Vehicle Operation**

1. Pre-trip inspections and maintenance records for equipment and vehicles shall be presented to the owner upon request.
2. Vehicle operators must possess a valid license appropriate for the vehicle being operated.
3. Headlights must be on at all times while travelling on the Hartland Landfill site.
4. Contractor personnel must obey all traffic signs and directions.
5. Emergency brakes must be applied while parked.
6. All loads (equipment and materials) must be secured to each vehicle so as not to pose a danger.
7. Vehicle loads must not exceed the permitted weight limits.

### **Gas Detectors**

Depending on the task, personal gas detectors measuring H<sub>2</sub>S, O<sub>2</sub>, LEL and CO are required while working within the landfill footprint (map attached as Appendix A):

In the event of an alarm:

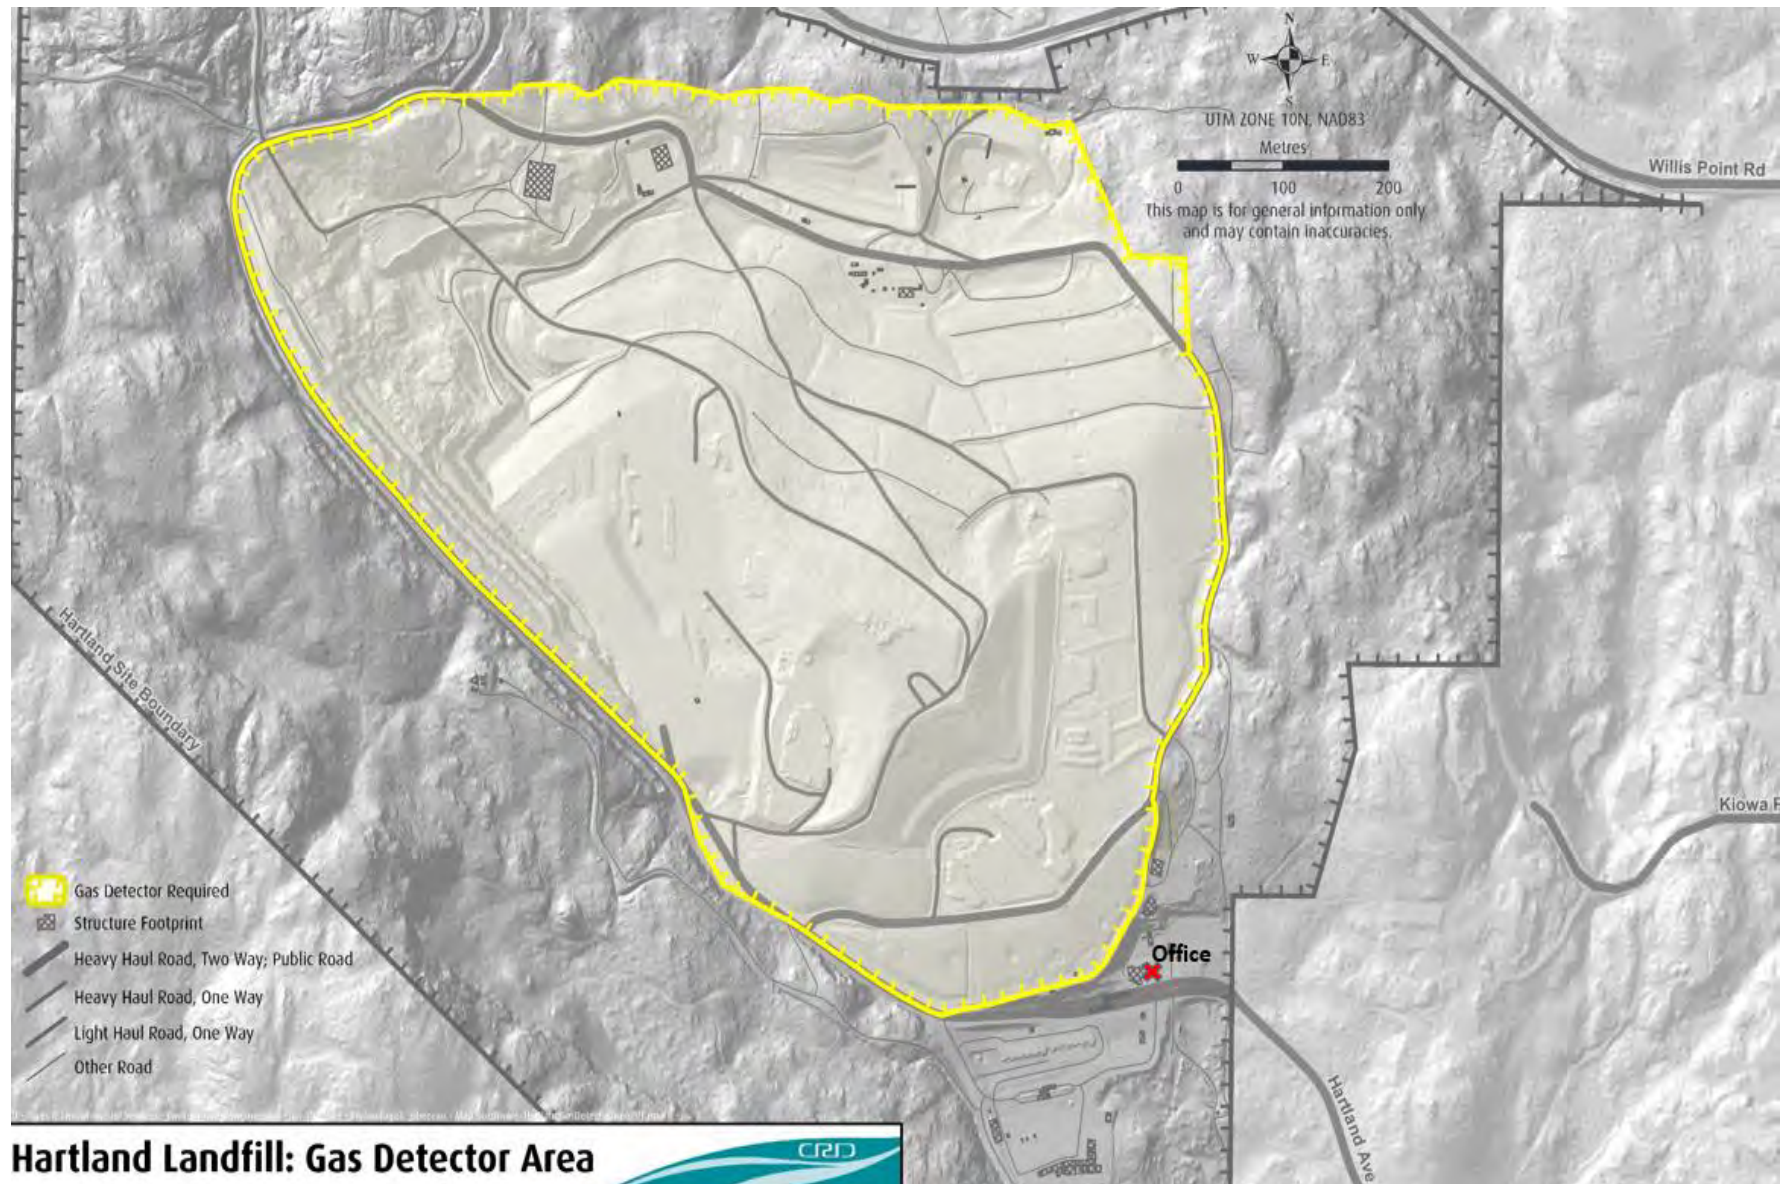

- Leave the area immediately and report the alarm to Hartland staff.
- Do not re-enter the work area unless it has been deemed safe by the Supervisor, Safety & Technical Services (or designate).

## **Hartland Landfill – Contractor Site Safety Requirements**

## Appendix C – Disaster Gathering Points (Muster Station Locations)

*Intentionally left blank*

## Appendix D – Hartland Landfill Contractor Orientation Checklist

|                                |  |
|--------------------------------|--|
| Contract/Project:              | Company<br><input type="checkbox"/> Prime Contractor <input type="checkbox"/> Sub Contractor |
| Work Location within Facility: |  |
| Orientation presented by:      | Manager/Project Lead designated to supervise work:   |

### Requirements

The Capital Regional District (CRD) meets with the contractor, and their personnel, to advise them of site conditions and hazards, prior to commencement of the work. This orientation is for every worker/contractor.

**Please indicate with a checkmark (✓) that the following topics were presented to you in the orientation.**

**NOTE:** Contractors are responsible for the safe performance of their work.

#### Introduction

- ☐ COVID Response
- ☐ First Aid
- ☐ Disaster gathering point
- ☐ General requirements
- ☐ CRD Bylaw
- ☐ Site conduct

#### Hazard Awareness

- ☐ Health Hazards
- ☐ Fire Hazards
- ☐ Site Conduct
- ☐ Buried refuse stability
- ☐ Slope hazards
- ☐ Traffic hazards
- ☐ Power lines
- ☐ Landfill leachate
- ☐ Silica
- ☐ Asbestos
- ☐ Dust

#### Site Safety Requirements

- ☐ Site access
- ☐ Working alone
- ☐ Housekeeping
- ☐ Personal Protective Equipment
- ☐ Blasting
- ☐ Reporting
- ☐ Cutting, welding, grinding, sawing
- ☐ Excavations, Trenching, Drilling
- ☐ Electrical safety
- ☐ Immobilization of CRD equipment
- ☐ Fire Protection
- ☐ Traffic control
- ☐ Mobile Construction Equipment
- ☐ Vehicle Operation
- ☐ Gas Detectors

I have received the CRD Hartland Landfill contractor orientation, and I agree to comply with all safety rules and requirements for my work assignment and area. The company I work for has provided me with instruction and training for specific safety requirements. I have been appropriately trained, qualified and instructed by my employer to safely perform my assignment at CRD.

|      |                               |           |
|------|-------------------------------|-----------|
| Date | Print Name ( <b>CLEARLY</b> ) | Signature |
|      |                               |           |

**EVERY WORKER MUST SIGN OFF THE CHECKLIST PRIOR TO COMMENCING WORK**
