

# SEAPARC HOT TUB UPDATE

SEAPARC experienced a power outage in November 2021 that resulted in significant failure of the pool chlorination system, causing the hot tub to be out of service. Additional components were identified that are in need of repair however, because the current chlorination system is out of date, we are unable to receive replacement parts.

In December, the SEAPARC Commission approved replacement of the system as it is beyond its intended lifecycle. As well, they approved an upgrade to the entire chlorination plant. This will ensure that SEAPARC receives the most suitable system that will be in operation for many years to come. The Facilities Department worked with a consultant to determine the pool specific regulations and researched alternative systems, products and methods that will be able to tie in to the existing system and provide adequate chlorination to the three pools at SEAPARC.

We are happy to announce that the Pool Chlorination Plant Replacement Request for Quotation has been finalized and has been sent by invitation to vendors that specialize in commercial pools. The RFQ closes Feb 24, 2022. The contract will be awarded, following the CRD Procurement Policy. At this point, an estimated timeline of installation and resumption of service will be determined, likely in the spring of 2022.

We recognized this has significantly impact patrons' enjoyment of the pool, and we apologize for the delay. We look forward to opening the hot tub as soon as possible.
