

COCKROACH CONTROL

WHAT YOU SHOULD DO

Eliminate Cockroach Food

Thoroughly clean your kitchen to remove as many sources of cockroach food as possible. Remember to clean behind and under refrigerators and stoves. Wash dishes as soon as possible after using them and never leave dirty dishes out overnight. Put uneaten pet food in the refrigerator at night to keep it away from the cockroaches. Remove garbage to an outside garbage container daily.

Provide Access

We must be sure that cockroaches can find the bait to it. This means that we need to place the bait in areas that can sometimes be difficult to reach. Please help us by removing enough things from kitchen cupboards for us to reach the back of all shelves. Remove these materials from the kitchen so that they do not get in our way.

Report Sightings

It is a great help to us if you keep us informed about where you have seen cockroaches. If you cannot be present when the inspection or follow up visits take place please leave a note on the kitchen counter providing the details.
