

RODENT CONTROL

WHAT YOU SHOULD DO

Eliminate Rodent Food We want the rats and mice to be caught in traps. The more you can do to eliminate sources of rodent food, the more likely it is that the rodents will seek food in our traps.

Thoroughly clean your kitchen to remove as many sources of rodent food as possible. Remember to clean behind and under refrigerators and stoves. Wash dishes as soon as possible after using them and never leave dirty dishes out overnight. Put uneaten pet food in the refrigerator at night to keep it away from the rodents. Remove garbage to an outside garbage container daily.

Eliminate Rodent Shelter Remove clutter and, where possible, store materials on shelves, off the ground.

Provide Access We must place traps in places where the rodents will find them. This means that we need to place the traps in areas that can sometimes be difficult to reach. Please help us by clearing the accesses to attics and crawl spaces.

Report Sightings It is a help to us if you keep us informed about where you have seen or heard the rodents. If you cannot be present when inspections or follow up visits occur please leave a note on the kitchen counter providing the details.
