

Environmental Education: Harbours and Watersheds

We all live in a watershed. A watershed is an area of land that drains rain, snow and ground water to a common point, such as a creek, wetland, lake or ocean. A healthy watershed includes lots of trees and plants to slow and filter precipitation and rain. Protecting watersheds keeps water clean for the plants and animals that live in these habitats and ecosystems.

Colour the watershed below. Add some more plants and animals that live in a watershed.
