

Construction & Demolition Waste

For The Contractor

Hazardous materials can come in many forms inside your home. For example, depending on the age of your home, there could be lead paint on your walls, asbestos in your flooring, PCB's in your light fixtures or mercury in your thermostat. To reduce risk of exposure to you and your family use the flow chart below and learn how to protect yourself.

Are you the contractor or disposal company hauling the waste with a self-tipping vehicle weighing more than 5,500kg (GVW)?
