

## Hazardous Materials Services: Assessments, Abatement, Clearance Letters, Testing

In order to properly identify asbestos in your home, it is recommended by WorkSafeBC that you hire a qualified testing company or asbestos surveyor. The testing company or surveyor will take samples of possible asbestos-containing materials in your home, and send them to a lab for testing. The surveyor will then provide you with a report of the location of asbestos in your home.

**Notes:**

- Published details are for information only, the CRD does not endorse any of the companies listed.
- While some companies may offer assessments, abatement services and clearance letters, the recommendation from WorkSafeBC is that:

“Third party sampling should be performed by a qualified person, on behalf of the owner or the abatement contractor (and should not be an employee of the contractor. It is not accepted industry practice for asbestos abatement (or other) contractors to perform their own asbestos air monitoring.”
