unit CO2e price =
unit natural gas / biomethane price =

Chemical Phosphorus Removal Chemicals: liquid-stream alum requirement =

unit alum product cost =

Wet-Weather CEPT Chemicals:
liquid-stream alum requirement =

alum product specification =

alum product specification =

unit alum product cost =

Raw Sludge Thickening and Truck Transport:

unit wastewater BOD generation rate = combined PS + WBS production rate = solids content of thickened sludge = specific gravity of thickened sludge = thickening polymer requirement = thickening polymer unit cost = transport truck volume = truck diesel fuel consumption =

Odour Control Chemicals:

unit scrubber chemical cost =

Membrane Cleaning Chemicals: unit chemical cost =

Maintenance:

unit allowance (new treatment facilities) = unit allowance (new interceptors, pump stations, forcemains, outfalls) =

Administration: lump sum annual allowance (treatment facilities) =

unit natural gas / power utility energy price = profit and overhead allowance for third-party energy utility = maximum unit price paid for heat energy by third-party utility =

Saleable Reclaimed Water: unit CRD potable water supply price (2008) =

Saleable Wastewater/Effluent Heat:

Note / Ref: Year 2065 CO2e cost assumed to vary between US\$15 and US\$155 t / CO2e, as per 032-DP-1 and based on Tirpak (2008).

Ref: Based on a 2009 value of \$15 t / CO2e per the Province of British Columbia Carbon Tax (2008).

Ref: Medicine Hat WWTF.

Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.

Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.

Ref: Based on Jan 15/09 TM from T. Dokken.

Ref: Based on Jan 19/09 e-mail from T. Dokken.

**Ref:** This is the typical price (i.e. "market price") of energy available from the power and natural gas utilities, based on a variety of assumptions on energy used in existing areas/redevelopment and new development. See notes in file based on information provided in M. Homenuke Feb 10/09 e-mail.

Note: The actual price that the CRD could sell the heat energy to the third party "heat recovery" utility depends on the cost of the utilities infrastructure. See the LCA sheets for WWTF-specific assumptions.

Ref: Average 2008 consumption charge across the CRD, per the CRD web-site.

#### Capital Regional District - Core Area Wastewater Management Strategy: Program Development Phase, Distributed Wastewater Management Strategy Activity 036 20062935.04.E.03.06 Subject: Option 1 File: Prepared: D. Shiskowski Last Revision: Generic Assumptions February 17, 2009 Last Revision By: D. Shiskowski For Life Cycle and Carbon Footprint Analyses value of reclaimed water relative to CRD potable water = 80% Note: Assumes use of same supply infrastructure for effluent heat. The "value" adjustment considers public perception of relaimed water relative to CRD potable water 0.72 /m3 unit reclaimed water price = Note: For both irrigation and toilet flushing. GHG Sources: Ref: Average value - BC Hydro's (2005) prediction for 2010 was 72 t/ GWh, which is a large increase from the 33 value predicted for 2005 and actual values of 46 and 22 for 2000 and 2003, respectively. BC Hydro-supplied electricity (average annual) = 72 g CO2e/kWh No other future projections were found. Heating Season value based on KWL (2008), West Shore C WWTP Concept Review Final Report. 100 g CO2e/kWh BC Hydro-supplied electricity (average heating season) = diesel fuel combustion (mobile truck) = 2,757 g CO2e/L Ref: Table A13-5, EC (2006). Moderately controlled HDDV. 1.2 kg CO2e/kg product production of sludge thickening polymer = Ref: de Haas et al (2008) GHG Off-sets (heat recovery): effluent heat recovery coefficient of performance (COP) = 4.0 Ref: Heat recovery off-set information and calculations provided by W. Wong (KWL) in Dec 9/08 e-mail natural gas furnace / boiler efficiency (n) = 0.95 energy extracted from effluent heat (x) = 1.00 GJ energy for heating delivered by heat pump = 0.75 GJ 0.33 GJ electical power /GJ effluent heat electrical energy required by heat pump = energy required for heating from natural gas combustion, equivalent to units of energy replaced via effluent heat = 1.40 GJ natural gas off-set via using effluent heat = 1.07 GJ therefore, unitless equivalence factor = 1.07 GJ of natural gas off-set by GJ of effluent heat natural gas combustion (stationary) = 0.0562 g CO2e/kJ Ref: Table 2.5, IPCC (2006). Tier 1 Value is for residential category and commercial/institutional category. 0.0002778 Wh 1 J = BC Hydro-supplied electricity (average heating season) = 0.0278 g CO2e/kJ Ref: Based on information in Feb 10/9 e-mail from M. Homenuke. fraction of effluent heat off-setting "natural gas heat" = 60% fraction of effluent heat off-setting "electric heat" = 40% **Existing CRD Trunk Sewer System** 4,600,000 /yr annual operations and maintenance cost (2008) = Ref: The Path Forward work. ADWF Macaulay and Clover pumping energy and costs are small, therefore did not remove from annual cost value. Note: Accounts for potential future increases in maintenance costs as system ages. annual average increase in operations and maintenance expenditures = 0.5% /yr REFERENCED PUBLICATIONS Abu-Orf, M., Reade, J., Mulamula, L., Pound, C., Sobeck, R.G. # SAANICH EAST WWTF ASSUMPTIONS

#### Electricity:

"base" unit power requirement =

wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment = effluent pumping power adjustment =

raw sludge thickening adjustment = total unit power requirement =

# Raw Sludge Thickening and Truck Transport:

thickening required (1 = yes, 0 = no)?
chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation =

0.600 kW-hr/d per m3/d of ADWF treated wastewater 0 x "base" unit power requirement Note: Not required as WW BOD = 260 mg/L (i.e. typical) 0.075 x "base" unit power requirement Ref: Based on Table 1.4, WEF \_\_\_\_.

0 x "base" unit power requirement 0.05 x "base" unit power requirement

0 x "base" unit power requirement 0.675 kW-hr/d per m3/d of ADWF treated wastewater

0% of combined PS + WBS

Note: Not required - effluent to marine environment.

Note: Not required - effluent to marine environment.

Note: Not required for ADWF effluent disposal. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. Note: Not required - sludge to sewer.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

#### Electricity: "base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = recycled centrate aeration power adjustment = UV disinfection power adjustment = 0.600 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Jan 15/09 TM from T. Dokken. 0 x "base" unit power requirement 0.075 x "base" unit power requirement Note: Not required as WW BOD = 260 mg/L (i.e. typical) Ref: Based on Table 1.4, WEF Note: Assuming extra N load is 15% of total facility N load and aeration electrical demand makes up one-half of total facility electrical demand. 0.050 x "base" unit power requirement Note: Not required - effluent to marine environment. Note: Not required for ADWF effluent disposal. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. 0 x "base" unit power requirement effluent pumping power adjustment = raw sludge thickening adjustment =

0.05 x "base" unit power requirement
0 x "base" unit power requirement

Note: Not required - sludge to sewer. 0.705 kW-hr/d per m3/d of ADWF treated wastewater

thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Raw Sludge Thickening and Truck Transport:

SOUTH COLWOOD WWTF ASSUMPTIONS (Liquid-Stream)

0% of combined PS + WBS Saleable Reclaimed Water:

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

Notes:
1. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.
2. Set to zero since heat would not be sold - see LCA sheet.

mean fraction of annual ADWF volume sold for landscape irrigation =

SOUTH COLWOOD WWTF ASSUMPTIONS (Liquid-Stream)

Labour:
number of facility manager(s) =
number of operations staff =
number of maintenance staff =
number of administration staff =
total staff =

Total Net Present Value =

mber of maintenance staff = 20 0 on the rot of maintenance staff = 30 on the rot of administration staff = 30 on the rot of pers

6 persons

\$7,688,076

Chemical Phosphorus Removal Chemicals:
chemical-P removal required (1 = yes, 0 = no)?

Wet-Weather CEPT Chemicals:

fraction of total annual ADWF treated = 5.0%

Reclaimed Water Disinfection:
allowance = 10.0% of other chemical costs

\$92,321,865

Saleable Heat Energy:
unit energy cost to third-party "heat recovery" utility = \$ 14.14 | /GJ unit CRD saleable energy price to third-party utility = \$ . /GJ

Excludes solids processing capital costs. Included in Biosolids LCA.

Ref: Allowance to account for potential costs.

Ref: Based on Jan 15/09 TM from T. Dokken.

\$0

\$6,950,870

Ref: Allowance to account for potential costs.

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 3% to remove CRD share of capital cost.

\$19,567,587

\$1,519,560

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

\$1,708,461

\$107,242

# MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

Electricity:

"base" unit power requirement =
wastewater strength adjustment =
influent pumping power adjustment =
recycled centrate aeration power adjustment =
Hartland landfill leachate aeration power adjustment =
UV disinfection power adjustment =
effluent pumping power adjustment =
raw sludge thickening adjustment =
total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:
mean fraction of annual ADWF volume sold for landscape irrigation = 0.49% /yr

0.445 kW-hr/d per m3/d of ADWF treated wastewater

0.050 x "base" unit power requirement 0.075 x "base" unit power requirement 0.050 x "base" unit power requirement 0.150 x "base" unit power requirement

0 x base unit power requirement
0 x base unit power requirement
0 x base unit power requirement
0 x base unit power requirement
0.590 kW-hr/d per m3/d of ADWF treated wastewater

0% of combined PS + WBS

Ref: Based on Jan 15/09 TM from T. Dokken.

Note: To account for Saanich East WWTF sludge impact on liquid-stream system.

Ref: Based on Table 1.4. WEF

Note: To account for leachate impact on liquid-stream system.
Note: Not required - effluent to marine environment.
Note: See MM OUT sheets for outfall pumping. See MM Heat for pumping to/from Victoria.
Note: Accounted for in solids-stream calculations.

Note: Yes, but not from a trucking perspective.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.
 Set to zero since heat would not be sold - see LCA sheet.

#### MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Excludes solids processing capital costs. Included in Biosolids LCA.

 Wet-Weather CEPT Chemicals:
 fraction of total annual ADWF treated =
 5.0%
 Ref: Allowance to account for potential costs.

Reclaimed Water Disinfection:
allowance = 10.0% of other chemical costs

Saleable Heat Energy:
unit energy cost to third-party "heat recovery" utility = \$ 14.67 /GJ
unit CRD saleable energy price to third-party utility = \$ . /GJ

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 16% to remove CRD share of capital cost.

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

Ref: Based on Jan 15/09 TM from T. Dokken.

Ref: Allowance to account for potential costs.

CLOVER POINT WET-WEATHER TF ASSUMPTIONS

Total Net Present Value =

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

\$1,281,346

\$115,354,940

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated =

Ref: Allowance to account for potential costs.

\$2,019,438

Notes:
1. Excludes dry-weather flow forcemain. Included in CS Mods LCA.

# Notes:

<sup>1.</sup> Includes transport of biosolids to land application site plus actual land application and coppice equipment.

Assumes that land applied biosolids are not off-setting commercial fertilizer use.
 Negative values imply an off-set and are considered as an offset in the analysis.

Notes:

1. Copied from dnt\_Organics\_LCA\_ds.xls, Alt1d - LCA.

3. Includes dieself fuel, driver, maintenance costs and same for coppice activities.

4. Excludes CO2e off-sets of commerical fertilizers by non-CRD end users (i.e. assumes that the CRD would not be able to sell these "credits"). Includes CO2 off-sets from sale of biomethane and dried WW sludges.

5. Includes biomethane upgrading and P recovery systems and willow coppice planting and harvesting equipment.

I									

Only refers to situation where thickened, undigested sludges are truck-transported to another site for processing.
 Includes biosolids transport.

Accounts for GHGs associated with electricity needed to power heat pumps.

Maintenance:

lump sum annual allowance (treatment facilities) =

# Saleable Wastewater/Effluent Heat:

unit natural gas / power utility energy price = profit and overhead allowance for third-party energy utility = maximum unit price paid for heat energy by third-party utility =

Saleable Reclaimed Water:

unit CRD potable water supply price (2008) =

Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.

Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.

Ref: Based on Jan 15/09 TM from T. Dokken.

Ref: Based on Jan 19/09 e-mail from T. Dokken.

**Ref:** This is the typical price (i.e. "market price") of energy available from the power and natural gas utilities, based on a variety of assumptions on energy used in existing areas/redevelopment and new development. See notes in file based on information provided in M. Homenuke Feb 10/09 e-mail.

Note: The actual price that the CRD could sell the heat energy to the third party "heat recovery" utility depends on the cost of the utilities infrastructure. See the LCA sheets for WWTF-specific assumptions.

Ref: Average 2008 consumption charge across the CRD, per the CRD web-site.

Note: Not required - sludge to sewer.

# SAANICH EAST WWTF ASSUMPTIONS

### Electricity:

"base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment =

effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

# Raw Sludge Thickening and Truck Transport:

thickening required (1 = yes, 0 = no)?
chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation =

0.600 kW-hr/d per m3/d of ADWF treated wastewater 0 x "base" unit power requirement Note: Not required as WW BOD = 260 mg/L (i.e. typical) 0.075 x "base" unit power requirement Ref: Based on Table 1.4, WEF \_\_\_\_. Note: Not required - effluent to marine environment.

Note: Not required - effluent to marine environment.

Note: Not required for ADWF effluent disposal. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. 0 x "base" unit power requirement

0.05 x "base" unit power requirement 0 x "base" unit power requirement 0.675 kW-hr/d per m3/d of ADWF treated wastewater

0% of combined PS + WBS

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

#### SOUTH COLWOOD WWTF ASSUMPTIONS (Liquid-Stream) Electricity: "base" unit power requirement = 0.670 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Jan 15/09 TM from T. Dokken. wastewater strength adjustment = influent pumping power adjustment = recycled centrate aeration power adjustment = 0 x "base" unit power requirement Note: Not required as WW BOD = 260 mg/L (i.e. typical) Ref: Based on Table 1.4. WEF . Note: No solids processing therefore no centrate. 0.075 x "base" unit power requirement 0 x "base" unit power requirement UV disinfection power adjustment = 0 x "base" unit power requirement Note: Not required - effluent to marine environment. effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement = 0.05 x "base" unit power requirement Note: Not required for ADWF effluent disposal. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. Ref: Based on Table 1.4, WEF 0.05 x "base" unit power requirement 0.787 kW-hr/d per m3/d of ADWF treated wastewater Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = 0% of combined PS + WBS round-trip transport distance to solids processing facility = Note: To/from Macaulay / McLouglin WWTF. Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation = Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable. Set to zero since heat would not be sold - see LCA sheet.

SOUTH COLWOOD WWTF ASSUMPTIONS (Liquid-Stream)

Labour:
number of facility manager(s) =
number of operations staff =
number of maintenance staff =
number of administration staff =
total staff =

Total Net Present Value =

1 2 1 0 4 persons Ref: Based on Jan 15/09 TM from T. Dokken.

\$203,037

\$1,645,376

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

Wet-Weather CEPT Chemicals:
fraction of total annual ADWF treated = 5.0%

\$50,788,533

Ref: Allowance to account for potential costs.

Reclaimed Water Disinfection: allowance =

10.0% of other chemical costs Ref: Allowance to account for potential costs.

15.51 /GJ - /GJ

\$5,125,384

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 4% to remove CRD share of capital cost.

\$10,534,939

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

\$1,708,461

\$32,183

Notes:

Excludes solids processing capital costs. Included in Biosolids LCA.

# MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

Electricity:

"base" unit power requirement =
wastewater strength adjustment =
influent pumping power adjustment =
recycled centrate aeration power adjustment =
Hartland landfill leachate aeration power adjustment =
UV disinfection power adjustment =
effluent pumping power adjustment =
raw sludge thickening adjustment =
total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:
mean fraction of annual ADWF volume sold for landscape irrigation = 0.85% /yr

0.575 kW-hr/d per m3/d of ADWF treated wastewater

0 x "base" unit power requirement 0.934 kW-hr/d per m3/d of ADWF treated wastewater

0.250 x "base" unit power requirement 0.075 x "base" unit power requirement 0 x "base" unit power requirement 0.300 x "base" unit power requirement 0 x "base" unit power requirement 0 x "base" unit power requirement

0% of combined PS + WBS

Ref: Based on Jan 15/09 TM from T. Dokken.

Note: To account for external WWTF sludge impact on liquid-stream system.

Ref: Based on Table 1.4. WEF

Note: Side-stream SHARON-ANAMMOX system used.

Note: To account for leachate impact on liquid-stream system.

Note: Not required - effluent to marine environment.

Note: See MM OUT sheets for outfall pumping. See MM Heat for pumping to/from Victoria.

Note: Accounted for in solids-stream calculations.

Note: Yes, but not from a trucking perspective.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.
 Set to zero since heat would not be sold - see LCA sheet.

20062935.04.E.03.06 D. Shiskowski February 17, 2009 D. Shiskowski

### MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

Ref: Based on Jan 15/09 TM from T. Dokken.

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)? Wet-Weather CEPT Chemicals:

Ref: Allowance to account for potential costs.

fraction of total annual ADWF treated = Reclaimed Water Disinfection: allowance =

Ref: Allowance to account for potential costs. 10.0% of other chemical costs

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 3% to remove CRD share of capital cost.

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

Excludes solids processing capital costs. Included in Biosolids LCA.

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

14.34 /GJ - /GJ

# JUAN DE FUCA WWTF ASSUMPTIONS

### Electricity:

"base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment =

effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

## Raw Sludge Thickening and Truck Transport:

thickening required (1 = yes, 0 = no)?
chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation =

0.475 kW-hr/d per m3/d of ADWF treated wastewater 
0 x "base" unit power requirement 

Note: Not required as WW BOD = 260 mg/L (i.e. typical) 0.075 x "base" unit power requirement 0.100 x "base" unit power requirement

Note: Required - effluent to sensitive marine environment.

Note: See JF OUT sheets for outfall pumping. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. 0.05 x "base" unit power requirement Note: Not required - sludge to sewer.

0 x "base" unit power requirement 0.582 kW-hr/d per m3/d of ADWF treated wastewater

0% of combined PS + WBS

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

JUAN DE FUCA WWTF ASS  Labour: number of facility manager(s number of operations staff = number of maintenance staff number of administration sta total staff =	s) = = ff =		1 8 5 1 15	persons	Ref: Based on Jai	n 15/09 TM fro	om T. Dokken.															

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated =

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

Note: No secondary treatment bypass.

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 2.5% to remove CRD share of capital cost. Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat.

### OGDEN POINT WWTF ASSUMPTIONS

### Electricity:

"base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment =

effluent/raw sludge pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

Raw Sludge Thickening and Truck Transport:

thickening required (1 = yes, 0 = no)?
chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation =

. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

0.525 kW-hr/d per m3/d of ADWF treated wastewater x space unit power requirement x with x with power requirement x with x 0.075 x "base" unit power requirement 0 x "base" unit power requirement 0.100 x "base" unit power requirement

Ref: Based on Table 1.4, WEF \_\_\_\_. 0 x "base" unit power requirement 0.617 kW-hr/d per m3/d of ADWF treated wastewater

Note: See OP OUT sheets for outfall pumping. Allowance is for heat recovery pumping; i.e. pumping effluent to a nearby District Energy System for use by others. And sludge pumping to Macaulay / McLoughlin WWTF. Note: Not required - sludge to sewer.

0% of combined PS + WBS

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See Flush Rev LCA worksheet.

# CLOVER POINT WET-WEATHER TF ASSUMPTIONS

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated =

Ref: Allowance to account for potential costs.

Notes:
1. Excludes dry-weather flow forcemain. Included in CS Mods LCA.

# Notes:

<sup>1.</sup> Includes transport of biosolids to land application site plus actual land application and coppice equipment.

Assumes that land applied biosolids are not off-setting commercial fertilizer use.
 Negative values imply an off-set and are considered as an offset in the analysis.

Notes:
1. Copied from dnt\_Organics\_LCA\_ds.xls, Alt1d - LCA.
2. Includes dieself tuel, driver, maintenance costs and same for coppice activities.
4. Excludes CO2e off-sets of commercial fertilizers by non-CRD end users (i.e. assumes that the CRD would not be able to sell these "credits"). Includes CO2 off-sets from sale of biomethane and dried WW sludges.
5. Includes biomethane upgrading and P recovery systems and willow coppice planting and harvesting equipment.

Only refers to situation where thickened, undigested sludges are truck-transported to another site for processing.
 Includes biosolids transport.

Accounts for GHGs associated with electricity needed to power heat pumps.

GENERIC ASSUMPTIONS		
NPV Analysis:		
first year in analysis =	2008	
investment rate of return =	7.0% /yr	Note: Values for Discount Rate Base scenario.
capital works / land lease inflation rate =	3.0% /yr	
labour inflation rate =	3.0% /yr	
electricity inflation rate =	3.0% /yr	
natural gas/biomethane inflation rate =	3.0% /yr	
diesel fuel inflation rate =	3.0% /yr	
effluent heat inflation rate =	3.0% /yr	
chemicals inflation rate =	3.0% /yr	
reclaimed water inflation rate =	3.0% /yr	
dried WW sludges / woodchip inflation rate =	3.0% yr	
maintenance inflation rate =	3.0% /yr	
administration inflation rate =		
	3.0% /yr	Note / Bet Very 2005 COOp and any made to your legislature of LICOAT and LICOATE & / COOp as any 200 DD
GHG CO2e price inflation rate =	3.0% /yr	Note / Ref: Year 2065 CO2e cost assumed to vary between US\$15 and US\$155 t / CO2e, as per 032-DP-
	81 /tonne CO2e	1 and based on Tirpak (2008).
Labour:		
annual average staff cost =	\$ 75,000 per year	
Franciand Carban Emphysicates		
Energy and Carbon Equivalents:	0.07 /1.14/1-	
unit electrical price =	\$ 0.07 /kWh	
unit diesel fuel price =	\$ 1.50 /L	
unit CO2e price =	\$ 15 /t CO2e	Ref: Based on a 2009 value of \$15 t / CO2e per the Province of British Columbia Carbon Tax (2008).
unit natural gas / biomethane price =	\$ 10.00 /GJ	
Observiced Blackshamer Barrered Observiced		
Chemical Phosphorus Removal Chemicals:	440	
liquid-stream alum requirement =	110 mg/L of alum product	Ref: Medicine Hat WWTF.
alum product specification =	638 mg alum/mL product	
unit alum product cost =	\$ 0.40 per L of alum product	Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.
Wet Weather OFFT Observices		
Wet-Weather CEPT Chemicals:	20 // / /	
liquid-stream alum requirement =	80 mg/L of alum product	
alum product specification =	638 mg alum/mL product	
unit alum product cost =	\$ 0.40 per L of alum product	Ref: Based on General Chemical information in Feb 4/09 e-mail from T. Znajewski. Includes allowance for polymer.
Daw Shadaa Thiakaning and Tweek Transports		
Raw Sludge Thickening and Truck Transport:	0.070	
unit wastewater BOD generation rate =	0.070 kg BOD/d - pe	
combined PS + WBS production rate =	0.85 kg TSS/kg BOD removed	
solids content of thickened sludge =	6.0%	
specific gravity of thickened sludge =	1.02	
thickening polymer requirement =	8 kg polymer/dry tonne	
thickening polymer unit cost =	\$ 10.00 /kg polymer	
transport truck volume =	22 m3/truck	
truck diesel fuel consumption =	1.6 km/L	
Odour Control Chemicals:		
unit scrubber chemical cost =	\$ 0.0053 /d per m3/d of ADWF treated wastewater	Ref: Based on Jan 15/09 TM from T. Dokken.
Manufacture Observing Obs.		
Membrane Cleaning Chemicals:		
unit chemical cost =	\$ 0.0020 /d per m3/d of ADWF treated wastewater	Ref: Based on Jan 19/09 e-mail from T. Dokken.
Maintananaa		
Maintenance:	4.00/ 26.000 % 1.000 %	
unit allowance (new treatment facilities) =	1.0% of capital works	
unit allowance (new interceptors, pump stations, forcemains, outfalls) =	0.25% of capital works	
Administration:		
	\$ 100 000 hr	
lump sum annual allowance (treatment facilities) =	\$ 100,000 /yr	
Saleable Wastewater/Effluent Heat:		Ref: This is the typical price (i.e. "market price") of energy available from the power and natural gas utilities, based on a variety of assumptions on energy used in existing areas/redevelopment and new
	\$ 16.10 /GJ	
unit natural gas / power utility energy price =		development. See notes in file based on information provided in M. Homenuke Feb 10/09 e-mail.
profit and overhead allowance for third-party energy utility =	15.0%	Note: The actual price that the CRD could sell the heat energy to the third party "heat recovery" utility depends on the cost of the utilities infrastructure. See the LCA sheets for WWTF-specific
maximum unit price paid for heat energy by third-party utility =	\$ 14.00	assumptions.
Salaahla Baalaimad Water		
Saleable Reclaimed Water:	© 0.00 /m3	Pot. Average 2000 consumption shares careed the CDD new the CDD web site.
unit CRD potable water supply price (2008) =	\$ 0.90 /m3	Ref: Average 2008 consumption charge across the CRD, per the CRD web-site.

	Capital Regional District - Core Area Wastewate	er Management Strategy: Program Development Phase, Distributed Wastewater Management Strategy Activity 036	
ile:	20062935.04.E.03.06		Subject: Option 3
Prepared: .ast Revision: .ast Revision By: Checked:	D. Shiskowski February 18, 2009 D. Shiskowski		Generic Assumptions For Life Cycle and Carbon Footprint Analyses
value of reclaimed water relative to CRD potable water = unit reclaimed water price =	80% \$ 0.72 /m3	Note: Assumes use of same supply infrastructure for effluent heat. The "value" adjustment considers public perception of relaimed water relati Note: For both irrigation and toilet flushing.	/e to CRD notable water
GHG Sources:  BC Hydro-supplied electricity (average annual) =  BC Hydro-supplied electricity (average heating season) =	72 g CO2e/kWh 100 g CO2e/kWh	<b>Ref:</b> Average value - BC Hydro's (2005) prediction for 2010 was 72 t/ GWh, which is a large increase from the 33 value predicted for 2005 and No other future projections were found. Heating Season value based on KWL (2008), West Shore C WWTP Concept Review Final Report.	actual values of 46 and 22 for 2000 and 2003, respectively
diesel fuel combustion (mobile truck) = production of sludge thickening polymer =	2,757 g CO2e/L 1.2 kg CO2e/kg product	Ref: Table A13-5, EC (2006). Moderately controlled HDDV. Ref: de Haas et al (2008)	
effluent heat recovery):  effluent heat recovery coefficient of performance (COP) =  natural gas furnace / boiler efficiency (n) =  energy extracted from effluent heat (x) =  energy for heating delivered by heat pump =	4.0 0.95 1.00 GJ 0.75 GJ	Ref: Heat recovery off-set information and calculations provided by W. Wong (KWL) in Dec 9/08 e-mail.	
electrical energy required by heat pump = energy required for heating from natural gas combustion, equivalent to units of energy replaced via effluent heat = natural gas off-set via using effluent heat =	0.33 GJ electical power /GJ effluent heat  1.40 GJ 1.07 GJ		
therefore, unitless equivalence factor = natural gas combustion (stationary) = 1 J =	1.07 GJ of natural gas off-set by GJ of effluent 0.0562 g CO2e/kJ 0.0002778 Wh	Ref: Table 2.5, IPCC (2006). Tier 1 Value is for residential category and commercial/institutional category.	
BC Hydro-supplied electricity (average heating season) = fraction of effluent heat off-setting "natural gas heat" = fraction of effluent heat off-setting "electric heat" =	0.0278 g CO2e/kJ 60% 40%	Ref: Based on information in Feb 10/ 9 e-mail from M. Homenuke.	
Existing CRD Trunk Sewer System			
annual operations and maintenance cost (2008) = annual average increase in operations and maintenance expenditures =	\$ 4,600,000 /yr = 0.5% /yr	Ref: The Path Forward work. ADWF Macaulay and Clover pumping energy and costs are small, therefore did not remove from annual cost valuable: Accounts for potential future increases in maintenance costs as system ages.	ie.

#### Electricity: "base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment = 0.600 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Jan 15/09 TM from T. Dokken, based on Option 1/2 facilty. Note: To account for same load by reduction in Option 3 flow rate. 0.100 x "base" unit power requirement Ref: Reduced relative to Options 1/2. Note: Not required - effluent to marine environment. Note: Reduced relative to Options 1/2. 0.070 x "base" unit power requirement 0 x "base" unit power requirement effluent pumping power adjustment = 0.04 x "base" unit power requirement raw sludge thickening adjustment = total unit power requirement = 0.05 x "base" unit power requirement 0.756 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Table 1.4, WEF. Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility = 0% of combined PS + WBS Note: To/from Royal Roads Organics Facility. Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation = 0.53% /yr Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

#### Electricity: "base" unit power requirement = 0.670 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Jan 15/09 TM from T. Dokken. Note: To account for same load by reduction in Option 3 flow rate. Ref: Reduced relative to Options 1/2. Note: No solids processing therefore no centrate. wastewater strength adjustment = influent pumping power adjustment = recycled centrate aeration power adjustment = 0.100 x "base" unit power requirement 0.070 x "base" unit power requirement 0 x "base" unit power requirement UV disinfection power adjustment = 0 x "base" unit power requirement Note: Not required - effluent to marine environment. effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement = 0.04 x 'base' unit power requirement 0.05 x 'base' unit power requirement 0.84 kW-hr/d per m3/d of ADWF treated wastewater Ref: Reduced relative to Options 1/2. Ref: Based on Table 1.4, WEF. Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = 0% of combined PS + WBS round-trip transport distance to solids processing facility = Note: To/from Royal Roads Organics Facility. Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation = Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet. Notes: 1. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable. 2. Set to zero since heat would not be sold - see LCA sheet.

SOUTH COLWOOD WWTF ASSUMPTIONS

Total Net Present Value =

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

\$46,223,862

\$5,125,384

Ref: Based on Jan 15/09 TM from T. Dokken.

\$40,607

\$1,609,710

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated =

Ref: Allowance to account for potential costs.

Reclaimed Water Disinfection: allowance =

10.0% of other chemical costs

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

Ref: Allowance to account for potential costs.

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 4.5% to remove CRD share of capital cost. Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

\$1,708,461

\$27,155

Excludes solids processing capital costs. Included in Biosolids LCA.

# MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

## Electricity:

"base" unit power requirement =

wastewater strength adjustment = influent pumping power adjustment = recycled centrate aeration power adjustment = Hartland landfill leachate aeration power adjustment =

UV disinfection power adjustment =

effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation = 1.05% /yr

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

0% of combined PS + WBS km

0.650 kW-hr/d per m3/d of ADWF treated wastewater

0 x "base" unit power requirement 0.761 kW-hr/d per m3/d of ADWF treated wastewater

0.100 x "base" unit power requirement
0.070 x "base" unit power requirement
0 x "base" unit power requirement

0.000 x "base" unit power requirement

0 x "base" unit power requirement 0 x "base" unit power requirement

Ref: Based on Jan 15/09 TM from T. Dokken.

Note: To account for reduce flow rate but same load.

Ref: Reduced relative to Options 1/2.
Note: Side-stream SHARON-ANAMMOX system used.

Note: Received at the Roderick WWTF.

Note: Not required - effluent to marine environment.

Note: See MM OUT sheets for outfall pumping. See MM Heat for pumping to/from Victoria.

Note: Accounted for in solids-stream calculations.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet.

## MACAULAY/MCLOUGHLIN WWTF ASSUMPTIONS (Liquid-Stream)

Labour: number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff =

Ref: Based on Jan 15/09 TM from T. Dokken.

fraction of total annual ADWF treated =

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Ref: Allowance to account for potential costs.

Wet-Weather CEPT Chemicals: Reclaimed Water Disinfection: allowance =

10.0% of other chemical costs

Ref: Allowance to account for potential costs.

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

\$ 12.30 /GJ \$ 1.70 /GJ

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 4% to remove CRD share of capital cost. Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat.

Excludes solids processing capital costs. Included in Biosolids LCA.

#### Electricity: "base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment = 0.100 x "base" unit power requirement 0.070 x "base" unit power requirement 0.100 x "base" unit power requirement Note: To account for reduce flow rate but same load. Ref: Reduced relative to Options 1/2. Note: Required - effluent to sensitive marine environment. effluent pumping power adjustment = 0.04 x "base" unit power requirement Ref: Reduced relative to Options 1/2. 0.05 x "base" unit power requirement 0.911 kW-hr/d per m3/d of ADWF treated wastewater raw sludge thickening adjustment = total unit power requirement = Ref: Based on Table 1.4, WEF. Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility = 0% of combined PS + WBS Note: To/from Royal Roads Organics Facility. Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation = 0.90% /yr Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

\$ 11.72 /GJ \$ 2.28 /GJ

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 4% to remove CRD share of capital cost. Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat.

Ref: Based on Jan 15/09 TM from T. Dokken.

# OGDEN POINT WWTF ASSUMPTIONS

## Electricity:

"base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment =

effluent/raw sludge pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation = 1.20% /yr

0.100 x "base" unit power requirement 0.070 x "base" unit power requirement 0 x "base" unit power requirement

0.090 x "base" unit power requirement

0% of combined PS + WBS km

Note: To account for reduce flow rate but same load.
Ref: Reduced relative to Options 1/2.
Note: Not required - effluent to sensitive marine environment.
Ref: Reduced relative to Options 1/2.

0 x "base" unit power requirement
0.630 kW-hr/d per m3/d of ADWF treated wastewater
Note: Not required - sludge to sewer.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet.

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

Ref: Not required - sludge to sewer.

# WINDSOR PARK WWTF ASSUMPTIONS

## Electricity:

"base" unit power requirement = wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment =

effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

Raw Sludge Thickening and Truck Transport:

thickening required (1 = yes, 0 = no)?
chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation = 0.11% /yr

0.600 kW-hr/d per m3/d of ADWF treated wastewater
0.100 x "base" unit power requirement
0.070 x "base" unit power requirement
0.08 x "base" unit power requirement
0.04 x "base" unit power requirement
0.04 x "base" unit power requirement
0.08 x "base" unit power requirement
0.09 x "base" unit power requirement
0.09 x "base" unit power requirement
0.00 x "base" unit power requirement

> Material Flows and Carbon Footprint Analysis

#### Yellow-shaded cell denotes assumed/input value

#### WESTHILLS WWTF ASSUMPTIONS Electricity: "base" unit power requirement = 0.700 kW-hr/d per m3/d of ADWF treated wastewater 0.100 x "base" unit power requirement Note: To account for reduce flow rate but sam Note: To account for reduce flow rate but same load. Ref: Reduced relative to Options 1/2. Note: Required - effluent to sensitive marine environment but only for one-half of year. Ref: Reduced relative to Options 1/2. Ref: Beduced relative to Options 1/2. Ref: Besed on Table 1.4. WEF. wastewater strength adjustment = influent pumping power adjustment = UV disinfection power adjustment = 0.070 x "base" unit power requirement 0.050 x "base" unit power requirement effluent pumping power adjustment = 0.04 x "base" unit power requirement 0.05 x "base" unit power requirement 0.917 kW-hr/d per m3/d of ADWF treated wastewater raw sludge thickening adjustment = total unit power requirement = Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility = **Note:** Only doing chem-P removal for half the year. **Note:** To/from Royal Roads Organics Facility. 10% of combined PS + WBS Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation = Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet.

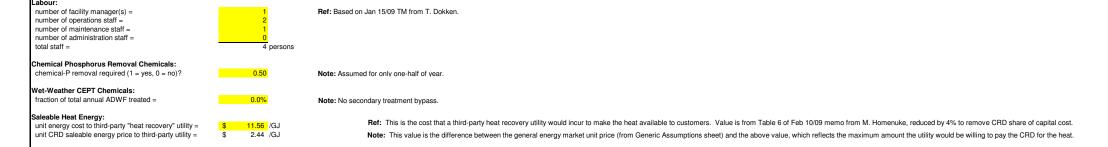

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

# FLORENCE LAKE WWTF ASSUMPTIONS

# Electricity:

Electricity:
"base" unit power requirement =
wastewater strength adjustment =
influent pumping power adjustment =
UV disinfection power adjustment =
effluent pumping power adjustment =
raw sludge thickening adjustment =

total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance =

round-trip transport distance to solids processing facility =

Saleable Reclaimed Water: mean fraction of annual ADWF volume sold for landscape irrigation =

0.700 kW-hr/d per m3/d of ADWF treated wastewater Ref: Based on Jan 15/09 TM from T. Dokken.

Note: To account for reduce flow rate but same load.

Ref: Reduced relative to Options 1/2.

Note: Required - effluent to sensitive marine environment, but only for one-half of year. Ref: Reduced relative to Options 1/2. Ref: Based on Table 1.4. WEF.

Note: Only doing chem-P removal for half the year. Note: To/from Royal Roads Organics Facility.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet.

1. Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

2. Set to zero since heat would not be sold - see LCA sheet.

0.100 x "base" unit power requirement 0.070 x "base" unit power requirement

0.050 x "base" unit power requirement 0.04 x "base" unit power requirement

10% of combined PS + WBS

8 km

0.05 x "base" unit power requirement

0.917 kW-hr/d per m3/d of ADWF treated wastewater

number of facility manager(s) = number of operations staff = number of maintenance staff = number of administration staff = total staff = 3 persons

Ref: Based on Jan 15/09 TM from T. Dokken.

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated =

Note: Assumed for only one-half of year.

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

Note: No secondary treatment bypass.

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 7% to remove CRD share of capital cost. Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat. Set to zero in this case since the unit selling price would be a negative value, indicating the CRD would need to subsidize the scheme.

# RODERICK WWTF ASSUMPTIONS

## Electricity:

"base" unit power requirement =

wastewater strength adjustment = influent pumping power adjustment = recycled centrate aeration power adjustment = Hartland landfill leachate aeration power adjustment =

UV disinfection power adjustment =

effluent pumping power adjustment = raw sludge thickening adjustment = total unit power requirement =

Raw Sludge Thickening and Truck Transport: thickening required (1 = yes, 0 = no)? chemical-P removal chemical sludge production allowance = round-trip transport distance to solids processing facility =

Saleable Reclaimed Water:

mean fraction of annual ADWF volume sold for landscape irrigation = 0.20% /yr

0.100 x "base" unit power requirement
0.070 x "base" unit power requirement
0 x "base" unit power requirement 0.300 x "base" unit power requirement 0 x "base" unit power requirement 0.04 x "base" unit power requirement 0.755 kW-hr/d per m3/d of ADWF treated wastewater

0% of combined PS + WBS km

0.500 kW-hr/d per m3/d of ADWF treated wastewater

Ref: Based on Jan 15/09 TM from T. Dokken. **Note:** To account for reduce flow rate but same load. **Ref:** Reduced relative to Options 1/2.

Note: Not required - effluent to marine environment.

Ref: Reduced relative to Options 1/2.

Note: Accounted for in solids-stream calculations.

Note: See dnt\_eff\_irr\_ds.xls for assumptions and details. Reclaimed water used for toilet flushing handled separately in analysis. See IRS LCA worksheet.

Data from M. Homenuke in Feb 4/09 e-mail, DES\_SaleableHeatEnergy.xls, Saleable.

ile: 20062935.04.E.03.06
repared: D. Shiskowski
ast Revision: February 18, 2009
ast Revision By: D. Shiskowski

Chemical Phosphorus Removal Chemicals: chemical-P removal required (1 = yes, 0 = no)?

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

Wet-Weather CEPT Chemicals: fraction of total annual ADWF treated = Subject: Roderick WWTF Option 3

number of administration sta	aff =		0	orcono																		
total staff =			8 p	ersons																		

Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 4% to remove CRD share of capital cost.

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat.

Note: No secondary treatment bypass.

# ROYAL JUBILEE HOSPITAL

Saleable Heat Energy: unit energy cost to third-party "heat recovery" utility = unit CRD saleable energy price to third-party utility =

\$ 8.76 /GJ \$ 5.24 /GJ Ref: This is the cost that a third-party heat recovery utility would incur to make the heat available to customers. Value is from Table 6 of Feb 10/09 memo from M. Homenuke, reduced by 17% to remove CRD share of capital cost.

Note: This value is the difference between the general energy market unit price (from Generic Assumptions sheet) and the above value, which reflects the maximum amount the utility would be willing to pay the CRD for the heat.

COMMON PIPE PUMPING REQUIREMENT

fluid specific weight = fraction pumped =

14.5 m 120 600 mm static head = friction C value = forcemain diameter = forcemain X-area = 0.2827 m<sup>2</sup> forcemain length = pump efficiency =

Ref: water\_reuse\_analysis.xls

Note: Assumes one-half of effluent produced per year gets pumped to Humpback Reservoir.

## Notes:

<sup>1.</sup> Includes transport of biosolids to land application site plus actual land application and coppice equipment.

Assumes that land applied biosolids are not off-setting commercial fertilizer use.
 Negative values imply an off-set and are considered as an offset in the analysis.

Notes:

1. Copied from dnt\_Organics\_LCA\_ds.xls, Alt1d - LCA.

3. Includes dieself fuel, driver, maintenance costs and same for coppice activities.

4. Excludes CO2e off-sets of commerical fertilizers by non-CRD end users (i.e. assumes that the CRD would not be able to sell these "credits"). Includes CO2 off-sets from sale of biomethane and dried WW sludges.

5. Includes biomethane upgrading and P recovery systems and willow coppice planting and harvesting equipment.

Only refers to situation where thickened, undigested sludges are truck-transported to another site for processing.
 Includes biosolids transport.

Accounts for GHGs associated with electricity needed to power heat pumps.
