Clover Forcemain: Archaeological Work

The Wastewater Treatment Project includes construction of a pipe which will transport wastewater from the expanded Clover Point Pump Station to the McLoughlin Point Wastewater Treatment Plant. This pipe, the Clover Forcemain, is a 3.3 km long pipe that will run along Dallas Road from Clover Point to Ogden Point, where it will connect to the cross-harbour undersea pipe.

The Wastewater Treatment Project is conducting further archaeological investigations to inform the final design and alignment of the Clover Forcemain.

What to Expect

A backhoe will be used to dig three test holes in Clover Point Park, south of the Dallas Road and Moss Street intersection. There will be some noise associated with the machine operation. Work is anticipated to take one day and will take place during the week of April 2, 2018.

Construction of the Clover Forcemain is anticipated to begin in summer 2018. A key focus of the Project will be to ensure people have as much information as possible in advance so they can plan for construction activities. More information will be available in spring 2018, including traffic management and construction plans.

Work Hours

- 8:00 a.m. to 5:00 p.m.
- Work is anticipated to take one day.

Traffic Impacts

- Work will be conducted off the roadway and is not anticipated to impact traffic, except for very short periods during loading and unloading of equipment.
- There will be no impact to accessing the seawall and parking.

About the Wastewater Treatment Project

The Wastewater Treatment Project will provide tertiary treatment for wastewater from the core area municipalities of Victoria, Esquimalt, Saanich, Oak Bay, View Royal, Langford and Colwood, and the Esquimalt and Songhees Nations and will be complete by the end of 2020.
