

Upgrade and Expansion of the Clover Point Pump Station

The Clover Point Pump Station will be upgraded and expanded as part of the Wastewater Treatment Project. The current pump station pumps sewage directly into the ocean. The expanded pump station will pump wastewater to the McLoughlin Point Wastewater Treatment Plant where it will undergo tertiary treatment. The pump station will also provide bypass pumping through the existing outfall during extreme storm events.

The Clover Point Pump Station expansion will be below the grade of the adjacent section of Dallas Road and will blend into the existing facility and surrounding area.

Work to be completed under this Project includes:

- Concrete works to expand the existing underground structure.
- Upgrades to process mechanical equipment in the pump station.
- Excavation for the foundation of the pump station.
- Connection to the new Clover Forcemain (pipe) which will convey wastewater to the McLoughlin Point Wastewater Treatment Plant.
- Public space improvements, including a new public washroom, bike and pedestrian amenities, public viewing plaza and improved green space.

Work Hours

- Weekdays from 7:00 a.m. to 7:00 p.m.
- Saturdays from 10:00 a.m. to 7:00 p.m.

Traffic Impacts

- There will be minimal traffic impacts on Dallas Road associated with the upgrade and expansion of the Clover Point Pump Station. Brief lane closures on Clover Point Road will be required when material and equipment are brought to site.

Access to the seawall and the parking at Clover Point will remain open during construction.

Construction is scheduled to be completed by mid-2020.

About the Wastewater Treatment Project

The Wastewater Treatment Project will provide tertiary treatment for wastewater from the core area municipalities of Victoria, Esquimalt, Saanich, Oak Bay, View Royal, Langford and Colwood, and the Esquimalt and Songhees Nations. The Project will be built so we comply with federal regulations by the end of 2020, and consists of the McLoughlin Point Wastewater Treatment Plant, the Residuals Treatment Facility at Hartland Landfill, and the conveyance system that will carry wastewater from across the core area to the McLoughlin Point Wastewater Treatment Plant, and residual solids to the Residuals Treatment Facility.
