## **Residuals Treatment Facility: Early Works**

The Residuals Treatment Facility (RTF) is being built as part of the Wastewater Treatment Project. Residual solids from the McLoughlin Point Wastewater Treatment Plant will be piped to the Residuals Treatment Facility at the Hartland Landfill, where they will be treated and turned into what are known as Class A biosolids. These biosolids are a high quality by-product safe for beneficial reuse.

The contractor for this part of the Project, Hartland Resource Management Group, will begin site surveying and mobilization in preparation for construction. Construction is anticipated to begin spring 2018 and take approximately 2.5 years to complete.

### **What to Expect**

Early works are anticipated to commence starting the week of February 12. Early work activities will be intermittent and will generally include:

- Site survey and layout.
- Installation of site office trailers and facilities.
- On-site geotechnical investigations.
- Coordination with utility agencies.

### **Location**

- Work is within the footprint of the Hartland Landfill site.

### **Work Hours**

- 8:00 a.m. to 5:00 p.m. Monday to Friday.

### **Traffic Impacts**

- Traffic impacts are expected to be minimal as work will be contained within the footprint of the Hartland Landfill site.
- Truck traffic and work vehicles will access the site from the north access on Willis Point Road.

### **About the Wastewater Treatment Project**

The Wastewater Treatment Project will provide tertiary treatment for wastewater from the core area municipalities of Victoria, Esquimalt, Saanich, Oak Bay, View Royal, Langford and Colwood, and the Esquimalt and Songhees Nations and will be complete by the end of 2020.
